> >LEARN it to pass the test. 73, Dana, AJ1R.
>

I hear the torches firing up now, but here goes. When I first took
my amateur test it was 1977 or so. I took the test with my father at
my instructor's home. We were on vacation when the rest of the class
took the test. It was not necessary to go to the FCC office. There
were question pools available then just as there are now. As for
the memorization of the electronics, yes I'm guilty. I know that I
will never design or alter any circuit boards in my equipment without
the help or advise from someone who truly understands all of the
electronics involved. On the other hand, I feel confident that I can
operate amateur equipment within the limits of the law without having
to have someone operate the controls for me.

I am curious as to whether Dana has ever taught an amateur class? I
for one would not know what I know now had someone not given their
time to teach me. I am not in an electronics related profession.

Roy,

I enjoyed your posting, but I am sure the misstatement was a careless use of the English language, not a technical error. (I will now drop that subject, 'cause I tend to rant and rave about it).

Please don't discourage NW2L, or any other ham in the world, from posting abstracts or digests of other radio magazines as I have been doing for QST. I have been trying for two years to encourage such postings for every other amateur radio publication. I hope NW2L's posting is an indication that the publishers of CQ are beginning to realize that by such postings, they can only increase the interest in their magazine by non-subscribers and, ultimately, increase their audience.

Now there is a possibility that a bilingual ham in Japan MAY begin to translate and abstract CQ - HAM RADIO, the most popular amateur radio publication in that country. I certainly hope he will do so, and an expression of interest from subscribers to this newsgroup might help him make up his mind!

Abuse of the spectrum...ABUSE OF THE SPECTRUM? (slap, slap).
Actually, it seems to be a thing that is just not some peoples bag. I do
it on a light weight basis (100 watts and a G5RV) and think its great.
Other guys turn the radio off on contest weekend.

Sure, ragchewing is fun, but for a coupla days a year, its fun to cut
loose and see how many people you can work (or states, countries, etc.)
in a short time. And if you enjoy the clarical tasks of QSLing, tracking
your progress for various operating awards, and stuff like that, a contest
is very stimulating and can produce many hours of this type of work.

As far as making friends, heres how its been for me on HF: Log book shows
about 1400 QSOs. I have met prolly 5 or 6 of the people in the log.
There are about 8 or 10 in there that I have worked more than once.
Although these contacts are much more meaningful than a contest Q, I
dont see where I have made many new friends in the process (at least not
for more than 30 minutes at a time). Contesters seem to attract people
of like mind in a community. I meet with other contesters for lunch, etc.
and have fun discussing contest related stuff, so contesting has made me
more new friends than ragchewing.

But if I had to give up either contesting or ragchewing, I would do without
contesting.

Something I saw in a .sig file applies here, sorry I dont know who to
credit it to, but it said:

To those who understand, no explanation is necessary, to those that dont,
no explanation is possible.

It wasnt said about contesting, but it applies.

Give it a try. Let me know what you think then.

Hi Theo,

Many people who copy higher-speed morse "copy behind"...that is, they listen and mentally copy 1, 2, 3 or more letters ahead before writing anything down. At first, this may seem impossible, but you can try it at lower speeds to see if it might work for you. It is helpfull in preventing you from "thinking you know what is coming next" and getting off track.

I'm not sure there are any other "tricks". It may just take some strong mental discipline to force yourself into not thinking about the content and just copy letters.

Maybe you could have someone send to you or make tapes of text in which each group of charaters starts out as a common word but ends in random characters? This might force you out of your habit of thinking ahead.

Good luck!

>Yeah i just wanted to know how i can pick up amateur t.v. on my t.v.?

You need a converter to pick up the signal on 430 Mhz (assuming ur talking about fast scan) and convert it to channel 3 or 4 on ur tv. Check mags for ads or you may run across one at a hamfest.

|> Yeah i just wanted to know how i can pick up amateur t.v. on my t.v.?

Depends on your setup.

If your TV can receive cable channels (most new one can switch between
braodcast and cable), then yes !

420.000 - 450.000 Amateur 70 Centimeters

420.000 - 426.000 ATV repeater or simplex
420.000 - 426.000 Cable TV Channel 57
426.000 - 432.000 ATV simplex
426.000 - 432.000 Cable TV Channel 58
432.000 - 438.000 ATV repeater or simplex
432.000 - 438.000 Cable TV Channel 59

This is not the only 'bandplan', but gives you an idea.

Of course, the transmitter would need to be relatively close, and
an external antenna (tuned properly) would help greatly.

From: jimkd0av@aol.com
Message-ID: <3k9hma$5th@newsbf02.news.aol.com>
Source record: 250592

I recently bought an all-mode 144/440 radio from a local dealer. After a short period, I decided that it was more than I needed and returned it. The rig was a demo but the dealer hit me with a 15% restocking fee and said I should be happy that it wasn't their normal 25%. Their policy was posted near the cash register but I guess I missed it.

I could understand a restocking fee on brand new, out of the box, equipment, but I thought 15% was a little excessive on a demo.

I would be interested in anyone's experience on restocking fees. Either reply here or direct to JimKD0AV@aol.com (I will supply a summary of responses to those interested).

thanks and "buyer beware"

The HTX-202 is a good choice for a 2m-only HT if you are on a limited budget. Don't let the RS name scare you. I think it's made by Maxon under license from Icom and sold at RS. I have no idea how they come up with these marketing arrangements. I digress. The radio is pretty solid and seems to laugh at being dropped and bumped (unintentional destructive testing I conducted last week).

The 202 cannot be modified for out-of-band transmit or receive.
Sound quality is good.

I use mine mobile with a small 1/4-wave antenna on top of my vehicle. It works pretty well but I can tell I'll be outgrowing it soon. I'm already dreaming about dual- and tri-band HTs.

I've heard experienced hams say they like it as a backup radio even though they are using much nicer radios now. So if you upgrade in the future, you can keep the 202 as a backup/loaner radio.

The HTX-202 and HTX-404 (440MHz) radios from RS go on sale periodically. They usually discount them quite a bit if you can wait. You might even go into a RS and ask them when they will go on sale. If they know, they'll tell you.

Good luck on whatever you decide.

>No, this is not a troll -- I really am trying to understand what the hook
>is that gets people involved in this.

I had something of the same attitude when I got my license a little over 2 years ago, that is: I didn't see a big appeal in contesting.

That all changed when I worked field-day: the entire event, contest that it is, was so full of challenges and teamwork and all sorts of FUN stuff that I really enjoyed it. I worked the novice station on CW (I was the only operator for that station) and it felt great to be able to put all that hard work in getting licensed into something with a goal: making lots of contacts.

I am not a contester: I run 100 watts to a dipole and enjoy ragchewing, primarily on CW, over all other forms of ham communication. I do work the November CW sweepstakes, though, primarily for a challenging change of pace: for one weekend rag-chewing is put aside and a persons operating and physical capabilities are put to the test. I am not interested in winning: I send all my code manually and copy the same, though I could rig my station to do otherwise. For me the occasional contest is a personal challenge, and therein lies the appeal.

Try one sometime...you might be surprised at how enjoyable a contest can be!

>abuse of the spectrum. Wouldn't it be more enjoyable to use the time to
>have real QSO's and possibly make new friends in the process?

As the previous respondent pointed out, if you don't understand, no explanation is possible. However, I will try.

My personal enjoyment comes from the competitive nature of the event. I find this quite amusing personally, since I am not a competitive person by nature EXCEPT in a contest. I have never been one for ragchewing. My personal enjoyment in the hobby does not come from talking to somebody about their wife and kids, or what kind of garden they've planted this year (Unless they're from the African continent!). I am a DX'er and Contester. Yes, this means I send and receive a lot of "599 QRZ?" exchanges. For some, that can be comapred to a video game, or at the least, quite boring.

My primary enjoyment comes from the fact that I have established two-way contact with somebody on the other side of the earth. It doesn't matter what the duration of the contact is...to me, the mere fact that I am able to do it serves as enjoyment enough.

I am constantly trimming or pruning my station to make it as efficient as possible. I'm hardly a Big Gun operator, but I like to see what I can do with the equipment I have. To me, contesting is the best way to put my station through the ringer, find out what it's strengths and weaknesses are (and my personal ones, too), and examine room for improvement. In addition, contesting offers me chances to take care of the awards that I'm currently pursuing (DXCC, VUCC, WAZ, 5B WAS) with an alarming degree of efficiency Example: I decided I wanted a good, short-term challenge, so I decided to go for WAS on 160m. I only have a 40m dipole for a 160m antenna, so this seemed like a decent personal and station challenge. I was able to accomplish this feat in less than 3 months, primarily due to the ARRL 160m and International DX contests. There are some folks that have been trying to do this for several years. Does that make me a better op? I don't think so. Perhaps a wiser investor of time, but not "better."

Regarding meeting new people, I've made more long-term friendships (8+years) through contesting than by ragchewing. I've even been invited to operate from some places around the world where the "local" has opened his home and station to me for next to nothing (in one case, NOTHING), allowing me to see different parts of the world that I couldn't afford to

see otherwise.

As for the presumed "waste" of spectrum, let's make the analogy to auto racing. Lots of people enjoy getting in their cars and driving in a circle at 200mph for hours on end. I don't get it. You could even argue that in this day and age of "reduce, reuse, recylce" and "save our natural resources," auto racing is a trememdous waste of petroleum products. Obviously, there are lots of folks who don't see it that way. besides, if you don't enjoy the QRM caused by contesting, you can always switch modes of communication. If it's an SSB contest, ragchew on CW. (You DO know CW, right?) Also, remember that contests are limited to 48 hour periods. You can ragchew ANY day of the year.

I personally feel that slow-scan TV is one of the most obnoxious forms of communication by ham radio there is. But then again, who the hell am I to judge? Do what you enjoy the most.

These are my two cents. I speak for nobody but myself.

73,

Sean

In article <3k7dsf$1aae@usenetw1.news.prodigy.com>, HWDX09A@prodigy.com
says...
>
>The following was printed in the March 1, 1995 issue of the W5YI Report
>and is a very interesting responce to K1MAN on the ongoing interference
>complaints with I.A.R.N. bulletins. The FCC attitude is refreshing.
>

Snip of poignant and generally righteous letter

>I also urge you to consulty with an attorney concerning MS
>Malone's letter. To provide you with some incentive to do this, let me
>say that if you wish to communicate with me for any reason, it must be
>done through an attorney. I will not accept any letters or telephone
>calls from you personally.

Mr. Greenspan, if you are listening, I spit on you for this. This kind
of attitude ought to bring you and everyone like you up on anti-trust
charges. This is no different than having all the hamburger vendors
in this country agree to raise their prices at once, and no
hamburgers can be sold at less than the agreed to price. What you are
saying is that communication between an individual and an attorney is not
possible because the individual must pay an attorney to communicate with
you. You and your type are scum and are killing the viability,
productivity, and competitiveness of this country. This person to whom
you addressed this letter should be able to contact you or anyone else
and carry on a conversation or communicate in any way without the
unnecessary burden and overhead of having to hire a highly educated
professional liar.

Attorneys, and the law profession in general, are killing my country,
like aids breaking down an immune system. The only reason one ever needs
a lawyer is to defend oneself from another lawyer. If there weren't any
lawyers, then we wouldn't NEED any lawyers.

Go chase an ambulance - maybe we'll all get lucky and you'll get run over
and there will be one less damaging influence on this country.

Kudos to the poster of the letter - I am glad something is happening on
this subject.

> 1. Does California slash the zero for those with zero-land calls?

Probably not, since the 00's in the number plates look the same as oo's

>
> 2. How much extra do the plates cost? One-time fee, or every year?

One time fee (so far)

>
> 3. What form needs to be filled out to apply for the plates?

Used to be DMV form 441 - DO NOT try to use the normal "environmental" route- that system automatically blocks requests that look like ham calls (with a fairly ambiguous message- it's trying to "help" you).

>
> 4. How long does it take to get the plates?

Not too long

>
> 5. What is your opinion on the risk factor for break-ins and/or
> vandalism that call plates add?

In northern california, not much added risk.

: I had the same problem, and asked a fellow ham here at work for a substitute
: part. Attached is his reply. BTW, the part I ended up with did work, but
: even after adjusting the input and output trim capactiors I found that the
: added gain of the preamp was nearly offset by the increase in the noise floor.
: Turning up the *audio* gain of my rig was almost as good as turning on the
: preamp! If you have a choice of devices, look for one with a low noise figure.
: The one I ended up with had 4db listed on the package, even though it seems
: it should be 2db.

Unless you have a rather deaf radio, it is quite likely that a 2M
preamp in a brick sitting next to your radio will provide little,
if any, improvement in sensitivity. This wasn't the case 20 years
ago...

Reasons why.

1. The radio may have a better noise figure than the preamp.

2. The background noise in most urban areas is quite high. The
background noise may be a bigger factor than the sensitivity of
the radio. This noise is primarily generated by devices hooked
to the AC power grid. The fewer such devices around you, the
quieter your location. The problem goes away as you go higher
in frequency. One of the reasons why all the new technologies
(DSS, GPS, PCS, ect) all use microwaves--its quieter up there.

3. The lossy feedline to the antenna may determine the sensitivity
of the system. This is why mast mounted preamplifiers work so well
at UHF and above.

>the impression I get from the latest CQ. I'm even more amazed that amateurs
>in other countries have gotten hooked on this.
>
>No, this is not a troll -- I really am trying to understand what the hook
>is that gets people involved in this.
>
>-Dave

Gee Dave, this is one of those questions I have to answer with more questions...

Why do some people race cars? Why do some play sports? Why do some people operate cw and not RTTY? Why are many people contented with remaining on two meters and nowhere else?

Why do some people like asparagus and not broccoli? Why do bunny farts smell like carrots? [sorry Dave, I had to throw that one in there] 78-D

There really is no one answer. I enjoy the heck out of contesting but then again I don't enjoy EVERY contest. Depends on my frame of mind at the time of the contest. Depends on the station I happen to be operating [I'm not always operating at my own station].

You may have a valid question Dave, but ask yourself this: "What activities do I get involved with that others may not be too keen on?" You may find your answer. Everyone has their own likes and dislikes. Not everyone got into amateur radio for the same reason(s). If you were ever bitten by the proverbial "bug" you'd know what it is to breathe, eat, sleep, et. al. ham radio. Getta life seems to be the answer nowadays for those who can't see what is so much fun about contesting, working within a DX Net or a WAS net or County Hunter's Net or work all telephone area codes net. Hey, it's not my thing to sail across the Atlantic or walk over hot coals...but someone has to do it!

Hope this helps you out Dave. good luck in your endeavors.

3467. Need help with Spice 5.4 eval for Windows!

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-16 20:25:02 UTC
From: umthoma5@cc.umanitoba.ca
Message-ID: <3ka6qu$h7i@canopus.cc.umanitoba.ca>
Source record: 250612

Back in December there was a query on this newsgroup asking about the
Pspice 5.4 evaluation program for Windows. I finally got around to
getting it to try out but it isn't working for me! whenever I try to
load a circuit into the Pspice module, it immediately responds with the
message _Errors occurred during simulation_ and an empty output file is
produced. Occasionally, I get a general fault at ... Program aborted
message or it says it won't load because it needs at least 1024K of
memory. I've tried reinstalling it without any luck. Any suggestions?
I was trying to run it on an AST 486sx 25 with 4 meg ram. I turned off
all screen savers, wallpaper and modified my autoexec.bat file to load as
much high as possible. Does it need a math co-processor to run
properly? Is there a flaw in the program or is it just my setup? And
finally, is the 6.1 version mentioned in the previous article on the net yet?
Any help would be appreciated as it looks like an excellent program
otherwise. E-mail me directly if possible as I don't always get a chance
to read through all of my newsgroups and they are purged fairly quickly here.

Thanks!

3471. UHF/VHF anti-virus filter

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-16 21:20:53 UTC
From: dbushong@wang.com
Message-ID: <D5Jxyu.4J@wang.com>
Source record: 250616
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

In this month's Wordradio, page 15, there is an article about a UHF/VHF anti-virus filter for HTs. It's shown on top of a Yaesu FT-470.

Has anyone tried one of these on a higher-powered transmitter? I have a Kenwood 741, which puts out 50 watts, and I don't want to blow the sucker apart. Or, does anyone know if there is a higher-powered version of the filter?

Here's the text of the article (typos are mine, sorry...)

Worldradio, 520 Calvados Ave., Sacramento, CA 95815
Vol. 24, No. 10, page 15

==========
UHF/VHF anti-virus filter

Ann Shaver, AH2E

Concern over the possibility of Hawaiian repeaters becoming infected with mainland viruses has prompted Richard LaChance, AH6IO, to develop an effective, inexpensive anti-virus filter for use with all HTs. I tested this innovative product for one week, trying it on a variety of 2 Meter and 440 equipment and was very impressed with its performance. For the first time in many months, I was confident I could enjoy area repeaters without fear of picking up a virus.

[caption]
The anti-virus filter works well on VHF and UHF equipment. - photo by NH2Z

"The Aloha State is particularly prone to viruses," LaChance explained recently "First, we're the crossroads of the Pacific. Every month scores of hams from Europe, Asia and the rest of the United States visit here. For that matter, recent statistics show a significant proportion of our visitors now come from Oceania and Latin America as well. So the chances of someone importing a virus are relatively high. "Second," LaChance continued, "our warm, tropical climate is the ideal environment for the incubation of viruses. In my line of work, I see a lot of sick radios (LaChance is the technician m Hawaii's leading radio store) and I wanted to do something to prevent the spread of the problem. Honestly, I'd be overwhelmed if users of the City Hall or Diamond Head repeaters, for example, picked up some virus.

"These days, you just can't be too careful."

Although the anti-virus filter looks simple, much sophisticated engineering has gone into it. Just as important, it is easy to use. With the addition of only a simple adapter, it can be used on any VHF or UHF equipment. Imbedded in a small puka (a Hawaiian technical term generally translated as "hole") is an adjusting screw that permits the user to null out any detected virus.

My only complaint is that the antivirus filter does alter the center of gravity of HTs, particularly the newer micro-minis on the market. I found my unit to be slightly unstable when the 5/8 wave-length telescoping antenna was fully extended. Admittedly, this is a minor complaint, given the value of this simple device. On the other hand, the filter is equally effective with all types of radios and antennas. Versatility counts a lot! Although I have not yet had a chance to test it, I am looking forward to using it with my hardhat-mounted 440 6-element cubical quad.

"It is an awfully good idea," agreed Chuck Burch, AH6IN. "In my own experience with antennas, I've always found that monopoles offer adequate protection, but Richard has come up with something that the average ham, particularly the newer, less technically inclined ham, can use to good effect. Since the Center for Disease Control in Atlanta knows of no antibiotic that is effective against deadly repeater viruses, LaChance's filter will no doubt find a wide market.

Check with your local frequency coordinator. If he/she thinks your area is prone to viruses or if you plan to operate mobile or portable, consider protecting your equipment with an anti-virus filter. If your local ham supply center does not stock this item, contact LaChance directly. He is listed in the Callbook.TM

3472. Cliff Stoll writes about the net, CB and ham radio

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-16 21:24:54 UTC
From: pgsperseng@aol.com
Message-ID: <3kaab6$aiv@newsbf02.news.aol.com>
Source record: 250615

I just received a review copy of a book by Cliff Stoll titled "Silicon Snake Oil: Second Thoughts on the Information Superhighway," Doubleday, $30, ISBN-0-385-41993-7 (If you don't remember the name Cliff Stoll, he's the computer expert who discovered that some German hackers were breaking into US government computer systems and selling secrets to the KGB. He wrote a book describing his adventures titled "The Cuckoo's Egg" and Nova did a real nice docudrama about the incident.)

In any case, his latest book includes an interesting chapter (Ch 8) titled, "Comparing the Usenet to CB Radio, Without any Astronomy." Without violating copyright laws by reproducing those four pages here, he sees the Usenet as evolving into something akin to CB radio in its heyday--filled with profanity and vilification and sometimes intentional misinformation. Without any regulation or licensing it offers "conversations strangely vacant of substance" and "vicious attacks."

Cliff then relates how, as a teenager, he got hooked on ham radio--learned his code, got his ticket, built a homebrew 10W tube transmitter and started making CW QSOs around the world. And despite the arrival of cheap international telephone calls, satellite TV and net e-mail, all you do is follow the dots. He just doesn't find the same thrill as he did when logging a new country with equipment he built. He also feels that the ham community benefits from consideration, kindness and chosen words (and I think that, for the most part, he's right). Newsgroups are more akin to CB radio, he believes, with the implication that in a perfect world they'd be more like ham radio.

Anyway, you'll probably be hearing about the book, and I thought you might want to know about the passages pertaining to our hobby.

Jerry,

I've done some of this. I put a 2-meter handheld on my K-100R/T
and drove that thing from San Jose, CA to Anchorage, AK and back.
That was in 1988 so things are a little hazy right now. The antenna
is still mounted on the bike as well as the PTT switch and all the
power and RF cabling. Let's see ... I think the antenna is a 5/8-wave
mounted on the luggage rack and I ordered the headset assembly from an
outfit in the midwest which specializes in that sort of thing for
motorcycle police units. I'll have to look it up again, but I was
quite pleased with its performance. I had a boom mike mounted on the
side of my BMW helmet and I tucked it up under the part of that full-
faced helmet which is in front of your chin. That way it was close to
my mouth and out of the wind noise. There is a hole that is in the
handlebar assembly near the clutch lever (I think there is one on the
other side too) that I put the PTT switch in - I don't know why that
hole is there, perhaps for some accessory. But it worked out so that
I could push the PTT switch without letting go of the left handle grip.
This is a VERY desirable situation.

I'm taking my Extra exam this weekend but when that's over I'll try
finding out who and where this company is in the midwest ... the name
Cycle-Com rings a bell, but I'm not sure about it. Anyway, I'll get
back to you next week on it. If you don't hear from me, send me e-mail
cuz I undoubtedly forgot (!).

Good luck,

Jim Johnson WA6SII

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Antoine, F6FNU, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks to all.

TUNISIA. 3V8BB has submitted proper documentation. Cards will now be accepted for DXCC credit.

ZAIRE. Peter, ON6TT, continues to be active as 9Q5TT. He was recently operating RTTY on 20 meters starting at around 2030z.

BAHRAIN. The DX News Letter (DXNL) reports that Admiral Scotty Redd of the US Navy, AKA K0DQ, is signing A92Q. Listen for his 40 meter CW. QSL via Box 116, Manama, Bahrain.

MALTA. Birgit, DL7VTZ, and Holger, DL7VTM, will be on Gozo Island from March 24 to April 7 signing 9H1TZ and 9H1TY, respectively. You may remember their recent DXpedition as TN2M and TN4U from the Congo. Plans are to participate in the CQWW WPX Contest on the 25th and 26th. Activity will be on all bands with 100 watts and wire antennas. QSL via DL7VRO.

BOUVET ISLAND. UA9OBA will be doing some extensive traveling throughout the Antarctic and Arctic regions beginning in June. Along the way he plans to activate a few new IOTAs, namely Nanskian and Scott Islands. At the end of this long trip sometime in late October or November he hopes to operate from Bouvet, AN-002.

SRI LANKA. Willem, ON6TZ, and Gerard, ON4ASQ, will be active until April 1.

ISRAEL. Riki, 4X4NJ, is active daily on 160 meters 20 minutes before and after his sunset. He can usually be found on or near

1830 kHz listening up. He needs ID, ND, NV, OR and UT to complete his WAS.

CONGO. YL op Hazel was heard last weekend signing TN7OT on 14220 kHz around 1945z.

KUWAIT. Faisal, 9K2HA, reports that as of March 1, all foreign amateurs visiting Kuwait must sign 9K2/their home calls. Please be aware that some calls once issued to foreigners are now assigned to Kuwaiti nationals. For example, 9K2ZZ now belongs to Faisal, ex-9K2HA. QSL via ON6BY. As of March 1, 9K2ZZ is 9K2/N6BFM, 9K2ZC is 9K2/KI0K, and 9K2YY is 9K2/N0YKI.

PACIFIC DXPEDITION. Tosy, JA6VZB, will be active from Belau as KC6VW until March 17. Listen for him from Micronesia as V63BM March 17, 18 and 19, and Guam as AH0T/KH2 March 19 and possibly longer. He will work all bands using CW, SSB and RTTY, but concentrate on 160 meters and RTTY. Only QSL via the bureau to JA6BSM.

EUROPA. FR5HG should be active through April 30 with CW, RTTY and SSB. He runs 500 watts to a log periodic antenna. QSL via F6FNU.

ASCENSION ISLAND. G4RWD is on the air as ZD8WD until September.

CARIBBEAN DXPEDITION. Mark, DL1XAQ, and Ralf, DL9XAT, will be on from four different IOTAs in the Caribbean. Here is their schedule. From March 25 to 26, the Saint Vincent area, J8, NA-109. March 27 to April 1 from NA-025. April 1 to 4 from Saint Lucia area, J6, NA-108. April 4 to 8 from the Guadeloupe area, FG, NA-102. Activity will be on 80 through 10 meters. QSL via their home call signs.

SAINT LUCIA. Peter, DK1RP, will be on the air as J6/DK1RP from April 11 to 29. He will operate primarily CW on the WARC bands. QSL via the bureau.

THIS WEEKEND ON THE RADIO. Information on the Alaska and Virginia State QSO Parties and Russian DX Contest appears on page 123 of March QST. Rules for the Bermuda Contest are on page 105 of February QST.

3475. Re: Restocking Fee

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-16 22:56:30 UTC
From: wb8wyu@aol.com
Message-ID: <3kafmu$bqb@newsbf02.news.aol.com>
Source record: 250620

Well Jim, I used to feel the same way about restocking fees until I worked for a amateur radio dealer as a salesman. Basically it's a matter of warranties on "demo" and "used" gear. A demo unit still carries full manufacturer warranties even though it has been used in the store. However, as soon as a customer walks out of the store with the rig it becomes a used radio and manufacturers warranties are non-transferable. The fact that a dealer lets you return the radio instead of giving you trade-in value means that they will not be totally honest with the next buyer because they will still call it a demo. Unfortunately, (for the dealer) price wars on actual radio equipment are so nasty that most dealers are only making about 5 percent on most rigs. Also, keep in mind that a Radio Shack dealer is gouging you for so many other items that they can afford to absord the cost of the occassional returned radio. Believe me, I could tell some stories about ham operators as customers, such as the guy who came in the store, had me open a new HF radio, set it up, and show him how it operates. But, when he decided to purchase it he demanded that I sell him an unopened one because the one we opened for him was now used..... Also, there seems to be little loyalty in that business, the typical ham will call 25 1-800 numbers getting prices on a $3000 radio and if someone else is 5 bucks cheaper, they get the business regardless of what other nice things you've done for them. So I say pick yourself a dealer that you like and show them a little loyalty and they will take care of you.

Thanks for letting me get on my soapbox. 73's Jesse

3476. IPS Daily Report - 16 March 95

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-16 23:22:19 UTC
From: rwc@ips.oz.au
Message-ID: <3kah7b$bgt@flare.syd.ips.oz.au>

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 16/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 16 MARCH AND FORECAST FOR 17 MARCH - 19 MARCH

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 84/26

GOES satellite data for 15 Mar
Daily Proton Fluence >1 MeV: 1.0E+06
Daily Proton Fluence >10 MeV: 1.5E+04
Daily Electron Fluence >2 MeV: 6.2E+09 (very high)
X-ray background: A9.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
17 Mar 18 Mar 19 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 17 Mar: 84/26

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 15 Mar
Learmonth 10 3222 3232
Fredericksburg 11 16
Planetary 10 14

Observed Kp for 15 Mar: 3343 3223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
17 Mar 18 Mostly unsettled, with brief active periods possible.
18 Mar 8 Quiet
19 Mar 6 Quiet
COMMENT: A slight increase in the level of activity is expected on 17
Mar due to a coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
16 Mar normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
17 Mar normal fair poor
18 Mar normal normal fair
19 Mar normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
16 Mar 21 near predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
17 Mar 30 Daylight enhancements of 10-20% and otherwise near
predicted monthly values.
18 Mar 30 As for 17 Mar.
19 Mar 30 As for 17 Mar.
COMMENT: Spread F observed during the local night is possible again
today.
Observed Townsville frequencies: daylight enhancements.
Observed Hobart frequencies: daylight depressions 10-20%.

From: ko4ta@mindspring.com
Message-ID: <ko4ta.158.02FA979E@mindspring.com>
Source record: 250629

Today W5YI Fred Maia filed a formal petition with the FCC. The petition requests the FCC modify part 97 to prohibit one way broadcasting below 30 mHz.

To see the full petition go to the following WWW address.

http://www.mindspring.com/~ko4ta/bestofnet.html

Happy Hamming....

3482. Cordless Phone Info Needed

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-17 01:44:25 UTC
From: hansen@hpl.hp.com
Message-ID: <D5KA61.7w3@hpl.hp.com>
Source record: 250626

I want to use two Uniden CT-301 cordless phones, on the same channel, to be able to talk/receive to one of the base units that will be on tel line. Ie, I would like to use one of them as a cordless "extension" from shack in the garage. Troulbe is, the units have different "security codes" which apparently are generated internally. Therefore, they will not yet work as above.
Question: How to disable the security code, or, set each to the same code??

Please reply to hansen@saiph.hpl.hp.com Thanks.

3483. QSL Address

3484. Re: Callsign license plates in CA? [some answers]

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-17 02:41:13 UTC
From: keating@nosc.mil
Message-ID: <1995Mar17.024113.13312@nosc.mil>
Source record: 250627

Eric, Here are the answers as I know them....

1. Slashed zeros? No. Too bad, isn't it.

2. Cost? I think it costs $23 extra for the one time you buy the
plates,
not every year you register your car.

3. Form? Don't know, but DMV has them, and so does the Calif. AAA which
is
allowed to perform most DMV transactions as an agent of the DMV for
its
members. Much more convenient, btw.

4. About 6 weeks or so, has been my experience.

5. I doubt you could measure any significant risk change. Most don't
know
what they are. There is nothing different about them except that
your
call is the number. No mention of amateur radio, as some states
have.

Hope this helps a bit.

Send email for more info, if you need it.

: Most areas of the country that have active linking repeater networks use
: the 420 - 426 MHz sub band for the duplex link channels. ATV uses the
: 427.25 frequency or 426 - 432 sub band.

This may be true in Northern California Bob, but is is _n_o_t_ the case in much of the rest of the country. For instance it is not the case in southern California or Texas; links and ATV may be found intermixed (and sometimes interferring) throughout the entier 420 to 431 MHz frequency range.

In fact, I believe the forced 3 MHz duplex link channel plan you use in northern California is unique. Five mHz (or approximately 5 MHz) duplex link spacing is the norm everywhere else.

From: leigh@rain.org
Message-ID: <3kavic$n8i@news.rain.org>
Source record: 250630

Paul, I was very interested in your quotes from Cliff Stoll, in comparing Usenet to CB radio. But, in my humble opinion, his comments are largely cynical overstatements.

I've been active on Usenet, ham radio, and CB, and in my opinion the intelligence & useful communications on Usenet are the greatest of the three. Yes, there are "flamers", hoaxsters and violaters of both local & international laws, but overall, I belive the transference of useable intelligence on Usenet makes it superior.

Working a new country on ham radio is indeed exciting, but much of ham radio is just repetion: "RIG HR KNWOOD ES ANT DIPOLE ES WX CLDY", or boring drivetime repeater chatter. HF contesting is a sad waste of spectrum, IMHO.

Yes, I certainly like and enjoy Ham radio! But good luck getting information/intelligence from the local repeater windbag, or the HF DX station who only wants a QSL card and a "green stamp".

^ ^ ^

Due to the mandatory H in Pacific calls we're quite limited in the
number available for each catagory. As you can see, here in the H6th
District we're half way through the Advanced sequence, with two groups
already depleted. Once the Advanced calls are gone only Novice calls
will be left. We might be the first call district to be in this
situation! One wonders what will happen if the Novice calls run out.

>Except that one doesn't need to "get on" the low bands to learn about
>propogation, even first hand. Most people *listen* before they transmit.
>By listening you can often determine what propogation is like and about
>its effect on signals.

One wonders how many 10M openings have come and gone without anyone
even having a clue due to the fact that they were only listening.
I can recall many times listening to the bottom of 10 without
detecting a single signal; yet sending a long CQ brought lots
of bites from other `listeners' (who were probably also lamenting
how `dead' 10 was).

>This can be done without passing a 5 WPM beeping
>test.

If I hadn't passed my 25wpm beeping test I'd still be lamenting
how `dead' 10 is. The act of getting out there and dangling your
CQ bait will tell you infinitely more about propagation than just
listening.

>But in neither case (transmitting or listening) will first hand
>experience teach you much of anything about why or how propogation occurs.

When the band is truely dead then you get out the books and educate
yourself about the hows and whys. But the act of getting on the air
allows you to apply those facts. Facts without applications are
like days without coffee. Useless.

The one time non-refundable fee in California (the last time I checked) is $21.00. It can take several weeks to months depending on the backlog to receive them as the ham plates are not run in the same batch as vanity plates.

: You need a converter to pick up the signal on 430 Mhz (assuming ur talking
: about fast scan) and convert it to channel 3 or 4 on ur tv. Check mags
: for ads or you may run across one at a hamfest.

: Jim KD0AV

Keep in mind that some VCRs can be tuned to receive in the ATV band!
The ones that use trimpots to set up each channel can tune continuously
across the band. These are usually older units. Some of the new ones
allow channel preset to be done digitally. You can "preset" on an ATV
channel. You will need someone to transmit a signal to you - otherwise
it is very hard to tell where you are in the band. - Ray N2SPF -

Jordan Peugeot (dmunroe@vcd.hp.com) wrote:
: Could someone explain what the appeal is in contesting? I realize that
: people have differing ideas of what is fun, but, if contesting is what
: I think it is, spending an entire weekend making thousands of extremely
: brief contacts not only sounds boring, but also seems to be an incredible
: abuse of the spectrum. Wouldn't it be more enjoyable to use the time to
: have real QSO's and possibly make new friends in the process?

Regarding the "abuse" of the spectrum, couldn't the same thing be said for 50% of the "nets" on 75 and/or 20M? Or half the drivel heard on most 2M repeaters? It all depends on your point of view.

I enjoy the competition, the technology involved in building/operating a competitive station and the friends I have made amongst other contesters. I also think that contesters are, as a group, some of the best operators on the HF bands. For me it is exciting to listen to a really good operator pull calls out of a BIG pile-up at over 250 QSO's per hour! That takes skills very few hams have without a LOT of practice.

: Yet, I'm amazed at how popular contesting seems to be -- or at least that's
: the impression I get from the latest CQ. I'm even more amazed that amateurs
: in other countries have gotten hooked on this.

Contesting has ALWAYS been a popular worldwide activity. Many also do it to add countries to their DXCC totals. many rare countries are only active during contests.

: No, this is not a troll -- I really am trying to understand what the hook
: is that gets people involved in this.

Thank you for asking a very well thought out question instead of the typical bashing that comes from the usual intolerant-of-other-hams'-activities rants and raves that are so often prevalent on the bands.

73,
Gary

Ken Edwards (cnc23a@b4pph13e.bnr.ca) recently wrote
in <3k9gj7$hji@crchh327.bnr.ca>:

: If your TV can receive cable channels (most new one can switch between
: braodcast and cable), then yes !

: 420.000 - 450.000 Amateur 70 Centimeters

: 420.000 - 426.000 ATV repeater or simplex
: 420.000 - 426.000 Cable TV Channel 57
: 426.000 - 432.000 ATV simplex
: 426.000 - 432.000 Cable TV Channel 58
: 432.000 - 438.000 ATV repeater or simplex
: 432.000 - 438.000 Cable TV Channel 59

: This is not the only 'bandplan', but gives you an idea.

The channel 58 and 59 ATV are the most active. With a cable ready TV set
just connect a uhf beam antenna into the cable jack and tune to 58 or 59.

Most of the old wide band converters do not have the filtering that is
built in to the new cable ready receivers. Without good filtering you
will see the local 440 repeaters, links and packet stations in your picture.

ATV may transmit in the vertical or the horizontal plane. You will have to
try each for best results. That way in most areas you can simply change
antennas and see a different ATV station on the same frequency.

In the san francisco bay area we can watch the Space Shuttle on 58
vertical if we aim toward Mt Diablo. In the central valley the same
shuttle transmissions are 58 horizontal if you aim toward Mt Bullion.

If the ATV station is horizontal you may be able to use your existing uhf
broadcast tv antenna. Try it you may be amazed!

Hi de Jeff, N3GLV in Pittsburgh.
I have seen an article in one of the Mags, to use an old external modem and
Baycom software, for Packet.
We are probablly all aware that there are a mess of Internal modems around,
and their value (hamfest price around here) is only abt 5-15 bux.
I have an Everex Evercom 1200 internal modem. It will run 4-wire mode and
v.22 (wich is bell-202 I think). The problem with useing one of these is that
the Baycom uses DTR, RTS, and CTS for X-mit data, PTT and RX-data respectivly.
What is needed it to cut traces of the 8250 UART that controll these lines,
and re-connect them to the 'txd' and 'rxd' of the modem. Also pass a line out
to the outside for PTT, from the RTS line of the UART.
Does anyone have a working familiarity with the 8250 series of UARTS?
I do not seem to have a pin-out around here.
2nd project it to re-route the edge-card traces, to a Differant Address.
This would allow tcp/ip software to use multiple internal cards and still
have the standard RS-232 addresses for 'other' things.
Any help on either of these projects would be appreciated.

I have seen another problem with the Super Stationmaster. They are very long antennas with a colinear elements that are inside of a fiberglass radome. The radome tends to flex tremendously at high wind speeds. I have seen them flex back and forth so much that the colinear elements break or crack where they are soldered together. If you can get the antenna out of the radome, sometimes they are repairable. I have seen this happen only once on a UHF Stationmaster, but I have seen it happen many times on the VHF models. I recommend that if you use the Super Stationmaster, that you support the antenna at the top so that it does not sway in the wind. I am sure that Celwave makes mounting kits to support the top of the antenna.

My choice for repeater antennas is the folded dipole array.

I agree. The Diamond antennas with high gain have a very flat radiation pattern. They are so flat that they may overshoot your intended coverage area if they are at any elevation. Use the lower gain Diamond antennas if you must use a ham type antenna. I highly recommend a folded dipole array of commercial quality. Sinclair, D.B. Products, or Telewave make great commercial folded dipole antennas. You will probably save money in the long run over having to replace the ham type antenna after it blows apart from lightning or high winds and ice.

Perhaps it's obvious, but the first person to contact would be the station, if it can be identified, that is suspected of causing the interference.

I would also get your local club RFI committee involved. Also the ARRL Technical Assistant for the area. (Your Section Manager, listed on page 8 of QST, would know who that is.)

RR>The following was printed in the March 1, 1995 issue of the W5YI Report
RR>and is a very interesting responce to K1MAN on the ongoing interference
RR>complaints with I.A.R.N. bulletins. The FCC attitude is refreshing.

This has to be either bogus or...
1) Greenspan needs a new secretary because he can't spell, and
failed to learn English grammar, or...

2) W5YI needs a new secretary because he can't transcribe well!

Refreshing? This doesn't sound like anything any intelligent FCC
official would write at all. Don Simpson seems to be the one claiming
that he owns the frequency. I think they are both skating on thin
ice with the FCC.

RR>Dear Mr Baxter :

RR> A matter was brought to my attention several days ago that I need to
RR>discuss with you. We have been informed by certain amateur radio
RR>operators
RR>that you claim to have an ex-clusive right to use a certain frequency
RR>and
RR>that you are telling other amateur radio operators that if anyone uses it.

RR>I will revoke their license. Since the first person who complainded to
RR>us
RR>would not have any reason to know my name it appears the allegation
RR>might
RR>be true. We are investigating

RR> I have suggested to the Field Operations Bureau and the Wireless
RR>Telecommunications Bureau that if you have, in fact, in the alleged
RR>conduct, they should consider holding a hearing to determine your
RR>fitness
RR>to remain an FCC licensee. I am making no representations as to whether
RR>or not such a hearing would be held or what the and what the result of
RR>it
RR>might be. However, if you are using my name or the name of any other FCC
RR>employees to threaten other amateur radio operators with sanctions, you
RR>should cease doing so immediately. You have been a licensee long enough
RR>to
RR>know the proper complaint channels.

RR> I have also received a copy of a letter you sent to an Assistant
RR>United States Attorney in Maine. For your infor-mation I did not write
RR>the
RR>letter Ms Malone sent to you, but I do concur with it. Your reply
RR>suggests
RR>to me that you may very well lack the character qualifications to be a
RR>FCC
RR>licensee. You certainly lack the maturity but that is, unfortunately,
RR>not
RR>grounds for revocation. While we do encourage people to bring violations
RR>to our attention, there is a fine line between being a good citizen and
RR>making improper threats. At the very least, you appear to be close to
RR>that
RR>line.

RR> If it is ultimately determined that you have made improper threats,
RR>that determination could result in a hearing to examine youe fitness to
RR>remain an FCC licensee and/or criminal prosecution. I make no
RR>representation as to what the outcome of any proceeding might be since I
RR>am not the one who will make that decision. However you should take Ms
RR>Malone's and this letter very seriously.

RR> Although you have not used lawyers in the past, I suggest that you
RR>consult with an attorney knowledgable in FCC procedures about your
RR>alleged
RR>conduct. I also urge you to consulty with an attorney concerning MS
RR>Malone's letter. To provide you with some incentive to do this, let me
RR>say
RR>that if you wish to communicate with me for any reason, it must be done
RR>through an attorney. I will not accept any letters or telephone calls
RR>from
RR>you personally. Besides for making for more orderly procedures here,
RR>using
RR>an attorney would clearly be in your best interests. I would also
RR>strongly
RR>suggest that you not send letters to anyone similar to the letter you
RR>sent
RR>to Ms Malone. As I previously indicated to you, such letters suggest to
RR>anyone who reads them that you may indeed lack the qualifications to
RR>hold
RR>an FCC license.

You might also suggest to the adult leaders that they review the Radio merit badge booklet itself. If the scout holds an amateur license, it preempts most of the requirements for that merit badge, so with just a few minor steps your son can put that one on his sash.

>thanks and "buyer beware"

I don't think 'caveat emptor' is necessarily appropriate here. After all, you made your purchase, and made the deal. Through no fault of the dealer, you decided that the equipment was surplus to your needs. It wasn't defective. It wasn't wrong. You just didn't like it. Very likely, all the information you needed to make that decision was available, pre-purchase, in the literature and perhaps on the demo-table.

This, after using the equipment for an unspecified period.

You then returned to the dealer, offering him for sale a slightly used rig, for which he offered a price slightly lower than that for which he'd be able to sell it (he could mark the same price you'd paid, but then he wouldn't be fair to the fellow who got it next).

IMHO, he was more than fair and accomodating. He could have said 'sorry, OM, but we're not currently looking for used gear, but you can put an ad on our bulletin board for a month.'

Or, if you didn't like the deal he offered, you could have decided to sell it privately.

There's no reason that he should give up any of the proceeds of the sale, plus incur the overhead costs of having both done and un-done the deal. It's only fair that the cost of your changing your mind should be yours and yours alone.

Also consider that the dealer probably needs to build in a considerable penalty just to discourage this very sort of thing, which gets kind of expensive for him.

The point is.... ....buyer's remorse, if the buyer hasn't been misled or over-sold, is really the buyer's problem. Somehow we've come to expect ham equipment dealers to go to more extraordinary measures than other merchants, possibly because of the fraternal nature of the hobby. In doing so, though, are we really being fair to the 'brethren' among us who make it their life's work to keep us in toys? Yes, some make a good living at it, but most of them could probably do better selling consumer electronics.

Greg

3512. 154.xxx MHz Frequencies - who uses them?

I must say that more often than not if I tune around 14MHz at a weekend there is nothing else but people shouting "contest", usually with no regard for other operators such as SSTV on 14230. It makes the band unusable for anything else too often. Why not have a contest free zone on each band where other interests can be indulged?

: limits. Take a 50 W panel, which is not exactly small, and have
: it sitting in the sun. On average it will harvest 5 to 10 watthours
: per day, which is about 400 to 800 mAhours at 12V. Now this is
: quite optimistic, sincesome losses during charging will occur.

: (of cause, for no clouds and if you keep tracking, performance will
: be a lot better, the above is for a fixed panel and average weather)

In some areas the weather is much better, so that you can count
on more than 6 to 12 minutes of bright sunshine a day. I recall
a typical figure of 4 hours, which would improve the situation by
a factor of 20 to 40.

If you are really into minimizing weight, I'd forget about using
any sort of electronic charge regulator. Instead, learn enough
about your equipment so that you can regulate the charge *manually*

>jerry AA3KN

The claim that the retailer had his terms posted near the register
does not hold up in court. He has to show a "meeting of the minds"
that you were aware of and accepted his terms. He undoubtedly knows
that, he's just trying to bully.

What does matter is what the dealer said to you at or preceding the time
of the sale. Think back to see if you can recall if he said anything to
the effect that if you didn't find it satisfactory, that you could return
the item. Do you remember any signs or literature or ads from the
store touting satisfaction guaranteed? If there were any representations
made to you in this form, his failure to explicitly call your attention
to any exceptions or restocking fees is his problem.

Also, it might be important to know what you mean by a "short period".
Are we talking a hours, days, weeks or what? In some areas, there are
statutory "cooling off" periods during which some kinds of consumer
transactions can be rescinded. Usually, they're restricted, e.g., only
to door-to-door sales, used car sales, etc., where the legislatures
are most concerned about fraud, but you'd have to check what the law

says in you area to know because there is some wide variation. It's possible that no matter _what_ he says, he can't legally charge a restocking fee on your return.

But also, it might be argued that his restocking fee is unreasonable. Obviously, there's some variation depending on the type of retail business, but it's not unusual in many retail operations (e.g., software, which I do know something about) for the retailer to be operating on a margin of only 10 or 12 percent. If they were to charge restocking fees of 20 percent or more on returns, they'd be making more money on returns than on satisfied customers! That'd make no sense at all and might be challenged in court.

OTOH, there's a difference between having a good case to take to court and being real interested in pursuing that avenue. Let's face it: it's a nuisance, even to fool with small claims, where you represent yourself and pay only token filing fees.

So another alternative, if you paid by credit card (you did, I hope!) is to contact the credit card issuer and contest the charges and terms of the return. Let me promise you: that _will_ get the retailer's attention since no retailer wants VISA threatening to yank his authorization to accept credit cards. (BTW, this is the reason why, if I have a choice these days, I NEVER buy anything with cash or check unless I absolutely have to or unless I have absolutely total confidence in the party I'm doing business with. It has nothing to do with wanting the "grace period" or whatever; it has everything to do with having additional leverage should there be a dispute.)

: > 5. What is your opinion on the risk factor for break-ins and/or
: > vandalism that call plates add?

: I have never noticed a risk factor from callsign plates. Never noticed
: anyone else worrying about it either. I don't think it is a problem.

Well..... just another further point here. My car was stolen ....
not because of the plates to be sure ... BUT .... the CA DMV told me
that my callsign plates would not be re-issued for 5 years as a result...
obviously because the police wouldn't be able to tell immediately if
my new car is stolen ... the license plates stolen... etc.

So .... the solution is either to get a new call ;-) or move out
of state and get the same call on new plates - which is what I've done.

: I have been trying to work DE and RI for the longest time, so when I
: heard of a WAS type net, I had to give it w whirl.

: Still looking for the elusive Deleware and Rhode Island

Well, Dan, I may be able to help. On Friday, 3/24, I am driving to the ARRL MD State Convention. I plan to operate CW mobile all the way there and back, primarily on the CW County Hunters Net, 14.056 MHz. I estimate I will be running through Deleware sometime Friday afternoon. If you miss that run, I am going to go through Deleware on the ride back, probably late Sunday afternoon. On that trip, I may try to hit all 3 Deleware counties, so I will spend a bit more time there. As I recall, the propagation is only fair to 6 land early in the afternoon, but gets much better later on.

On 4/28 I am driving to RI, do give a club talk for my dear friend Michael and Tony in RI. The last time I went, they made me liaison on 2-meter FM (I messed it up by trying them on the wrong repeater!), so this time I will get my revenge by having them liaison on 20-meter CW. I expect I will be in RI late afternoon, same frequency, 14.056, on the CW CHN.

The CHN usually tools along at 15-20 wpm, but I will gladly slow down if you prefer. I don't think we could do it "simplex" on SSB; my antenna is tuned for CW and the SWR and normal losses would give me an effective radiated power of only a few watts.

If you have to work on Fridays, the Sunday afternoon trip back will probably be better. If you email your phone number, I can give a call just as I take off from the Convention. I suggest that because I sometimes get asked to visit shacks, etc., by the Convention sponsors and I usually like to be gracious. If necessary and you have good ears, we could probably squeak by on 40 meters. My antenna is cut for 7.035.

If you miss all that, and RI is your last state, you can probably talk me into running over there; it is about an hour and a half from home and I am always looking for a chance to be a hero :-). I won't do that for Deleware, though; I don't want to be *that* much of a hero. :-)

One last suggestion; the SSB CHN meets on 14.336. I have heard LOTS of "rare" states show up as people drive to various counties. The mobiles always QSL!

>>Oh, no, the antenna experts are at it again.<<

Roy -- This is what happens when you take an excerpt of an excerpt and try to make a point with it. Of course, no one is suggesting that you can put 100 watts into an antenna and get 200 watts out! But it is a well-established fact that using an antenna exhibiting a 3 db gain over a dipole will effectively double your power -- that's why they call it Effective Radiated Power, or ERP. If you feed 100 watts into a 100% efficient antenna with 3 db gain over a dipole, then you have the EFFECT of feeding 200 watts into an equally efficient dipole. This is what antenna gain is all about. And if you feed 100 watts from your transmitter to that 3 db gain antenna, but burn up 50% of it as heat, you will still get the EFFECT of 100 watts into a dipole. And the whole point of the article was to discuss efficiency, not gain. Perhaps you would do better to read the entire article before asking people whether they're embarrassed to publish something.

Sorry, Mitch, but you won't find an answer that's supportable in fact. There are a variety of competing claims, from the extremely plausible to the ridiculous. Unfortunately, no one (so far) has been able to produce proof of any of them. Regardless, "ham" (not HAM, since it's not an acronym or an abbreviation) is a title that most amateur radio operators wear with pride.

I've done this a lot, and my advice is: don't. All the radio stuff is a big distraction. It's hard enough to ride safely in traffic without the added distraction of schmoozing on the radio. Also, you get important safety cues aurally, like horns, squealing tires, etc. You might not be able to hear them with 2 meters blasting in your ear. I carry my HT in my saddle bag, safely out of reach. When you ride, ride. When you want to ham, stop, get a soda, take a break, and chat with your friends on the wireless. My experience is, you don't want to mix the two. Best of luck, and ride safely.

3523. GB2RS News 19th March 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-17 19:03:15 UTC
From: dave@llondel.demon.co.uk
Message-ID: <795492195snx@llondel.demon.co.uk>
Source record: 250669
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 19th of March and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

King's College London is holding a 'Radio And Communication Day' on Friday the 24th of March, which will be open to the general public. There will be an exhibition, a series of presentations on the development of radio and the unveiling of a plaque commemorating the work of Sir Edward Appleton. There will be an RSGB stand at the exhibition, with representatives available to answer questions about amateur radio and the Novice licence. The 'Radio Day' will be held at King's College Strand campus, located next to Somerset House and close to Waterloo Bridge. The closest underground station is Temple. For further information call Anne Robinson on 0171 873 2696.

This year is the 100th anniversary of Marconi's first successful experimental transmissions and there will be a number of special event stations and exhibitions on International Marconi Day on the 22nd of April and during the course of the year. At RSGB headquarters in Potters Bar there will be a Marconi exhibition and a special event station, GB100IMD {that is "GB one hundred IMD"}, at the RSGB's annual Open Day which this year is also on Saturday the 22nd of April. Would anyone celebrating the 100th anniversary of Marconi's work please let us know at RSGB headquarters so we can give your special event station or exhibition a mention on GB2RS.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

A major expedition to Conway Reef is planned for Friday the 24th of March until Monday the 3rd of April. Callsigns will be 3D2CT on SSB and 3D2CU on CW and RTTY. The group plans to run three stations simultaneously, round the clock, and particular attention will be given to working European stations. Check the usual DX frequencies. The operators are SM7PKK, SM6CAS, OH1RY, NI6T and JH4RHF.

From Europa Island, FR5HG will sign FR5HG/E from now until the end of April on CW, RTTY and SSB. His QSL Manager is F6FNU.

From the Netherlands, PA56W is a special event station which will be on the air until Thursday the 23rd of March in order to commemorate the return of the Queen of the Netherlands in 1945, after the war.

And from Anguilla, AA4NC will sign VP2EN as from Wednesday the 22nd until Wednesday the 29th of March on all bands, including participation

in the CQ WPX SSB contest next weekend. Outside the contest he'll be active on RTTY. His QSL information is via his home call, that's AA4NC.

Next the Rally News:

Today, Sunday the 19th of March, the Norbreck Amateur Radio Electronic and Computing Exhibition is taking place at the Norbreck Castle Exhibition Centre, Blackpool. There are over 100 trade stands, a bring and buy stall, an RSGB information stand and bookstall, and RSGB President Clive Trotman, GW4YKL, will be in attendance. Talk-in will be on 2-metres, channel S22.

Also today, the Tiverton Mid-Devon Rally is taking place at Pannier Market, Tiverton. The rally features trade stands, a bring and buy stall and refreshments in two halls. The doors open at 10.00 am. Talk-in is on 2-metres channel S22.

Next Sunday, the 26th of March, the Bournemouth Radio Society annual sale will take place at Kinson Community Centre, Pelhams Park, Millhams Road, Kinson, Bournemouth. The event will feature amateur radio and computer traders, clubs and specialist groups. Doors open at 10.30am and there will be talk-in on 2-metres channel S22. Details from Malcolm, G0UCX, on 01202 747745.

Also next Sunday, the Magnum Radio and Computer Rally will take place at the Magnum Leisure Centre, Irvine. The event will feature the usual traders, special interest groups, a bring and buy stand, and Morse tests on demand. Take two passport-size photographs and identification if you wish to take your Morse test at the rally. Doors will open at 11.00am or 10.30 am for disabled visitors, and further details may be obtained from Bob, GM0DEQ, on 01563 574660.

Also on Sunday the 26th, the Pontefract and District Amateur Radio Society rally will take place at the Carleton Community Centre, Carleton, near Pontefract. This event will feature trade stands, a bring and buy stand and a bookstall. RSGB Morse tests will be available on demand, but don't forget to take two passport-size photographs along if you wish to take your test at the rally. Doors open at 11.00am or 10.30 am for disabled visitors. For details contact Colin, G0NQE, on 01977 677006.

Now for the HF contest news:

This weekend, the Bermuda Contest is taking place, and next weekend - the 25th and 26th of March - is the CQ WPX SSB contest.

As usual, HF National Field Day this year will be held over the first weekend in June, the 3rd and 4th. There is a small change to the rules this year - a second receiver will be allowed in both the Open and Restricted sections. That is, you will be allowed to use one transmitter and one receiver (or one transceiver) plus an additional receiver. Note that a transceiver with a built-in second receiver, such as the FT-1000, counts as two receivers. Groups wishing to compete must send details of

the site to be used to: David Hill, G4IQM, 14 The Garrones, Worth, Crawley, West Sussex, RH10 7YT, to arrive no later than the 6th of May. The full rules are published in the April RadCom, which is due to be posted to all members this week.

Next some VHF contest news:

Next week, Sunday the 26th of March, another 70 MHz contest will take place - it is the 70 MHz Fixed station and SWL contest, and the rules for this contest can be found in the February RadCom.

Also on Sunday the 26th will be the final Winter Microwave Cumulative contest on all bands from 2.3 GHz and up between 0900 and 2100 UTC. Although this contest does not appear in the VHF Contest Calendar in this month's RadCom, the full rules were published in the November edition.

The Stoke on Trent VHF repeater, GB3VT, on channel R5, became operational on the 7th of March from its new location.

The Wrotham {pronounced "Rootam"} UHF repeater, GB3NK, on channel RB4, returned to service on the 11th of March after being off the air for several months. This protracted period of downtime was due to difficulties in obtaining rigging services at non-commercial rates to replace a defective antenna.

The Daventry UHF repeater, GB3XX, on channel RB13, which has been off the air since the end of February, returned to service on the 14th of March.

The Chelmsford UHF repeater, GB3ER, on channel RB3 was shut down temporarily for maintenance on the 12th of March and it is expected to be off the air for about one week more.

And now news of a special event station:

GB0SET will be operational on the HF bands on Thursday and Friday, the 23rd and 24th of March, from the North East Wales Institute, Wrexham, to commemorate Science, Education and Technology week. It is hoped that British astronaut Helen Sharman will be visiting the station. For further information, contact Ian, GW1MVL on 01978 845858, or via Packet: GW1MVL at GB7WXM.

And now the solar factual data:

The period from 6th to the 12th of March saw solar flux levels decline. Geomagnetic activity increased from quiet levels to active conditions. We are sorry to report that due to a problem with the American auto re-route computer, some data is not available, and this is also effecting the daily solar bulletins put out onto the packet network by G0CAS. Solar flux levels declined from 84 units on the 6th to 76 units by the 12th. The average for the period was 80 units. Solar activity was very low, but on the 6th a C3.5/1N solar flare took place. Associated with this event was a type 2 and type 4 sweep with an estimated shock

velocity of 600km per second.

The 90 day solar flux average on the 12th was 84 units, which is down one unit from last week. Geomagnetic activity started the period at very low levels and was down to only Ap 2 units on the 8th. Levels increased to unsettled over the period from the 9th to the 11th, then increased again to active levels with an Ap index of 27 on the 12th. The average for the period was Ap 12 units.

The aa indices, as supplied by the British Geological Survey for the period from the 28th of February to the 6th of March, started at major storm levels with the daily figure for the 28th at 61.9 nanoTeslas. During the mid-evening period 136 nanoTeslas, K6, was recorded. Activity declined to quiet levels by the 3rd when the daily figure was only 10.0 nanoTeslas. Active conditions returned on the 4th and the 5th with 39.0 and 29.5 nanoTeslas being recorded respectively. The 6th was the quietest day with only 8.4 nanoTeslas, the average for the period was 34.5 nanoTeslas, about K3.

I'll repeat the figures: flux - 80; Ap index - 12.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 3rd to the 9th of March, averaged 6.8MHz. Levels were at their best on the 4th at 8.1MHz but collapsed to only 5.1MHz the following day, a slight recovery was made when levels increased to 7.1MHz by the 9th. The darkness hour lows averaged 2.6MHz. The daytime highs are taking place anywhere between 11.00 and 17.00 hours. The darkness hour lows mostly around 05.00 to 06.00 hours, but as early as 22.00 hours as on the 6th.

I'll repeat the figures: highs - 6.8MHz; lows - 2.6MHz.

And lastly the solar forecast.

This week the quiet side of the sun will be rotating into view, solar activity is expected to be very low. Solar flux levels are expected to be in to the low 80s. Geomagnetic activity is expected to be very quiet for most of the week. An Ap index of only one was recorded on the last solar rotation. Conditions may increase up to unsettled levels next weekend. Ionospheric MUFs for the south are expected to increase up to about 28MHz by midweek and 25MHz for the north, but may decline next weekend due to the expected higher levels of geomagnetic activity. The darkness hour lows are expected to be about 10MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Uniform and G7 Uniform Papa series, and Novice calls in the 2 0 Alfa Kilo and 2 1 Delta Victor series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

Posting-Frequency: posted on the 15th of each month

This message describes the rec.radio.amateur.*, rec.radio.cb, rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet mailing list counterparts and complements. It is intended to serve as a guide for the new reader on what to find where. Questions and comments may be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October 1994 to add the discussion of non-Usenet mailing lists and streamline most of the history discussion, and to change the moderator information for rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions were held on the mailing list, and sent to the mailboxes of those who had signed up for it. When the Usenet software was created, and net news as we now know it was developed, a newsgroup was created for hams: net.ham-radio. The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became progressively higher. First one by one, and then as part of two reorganizations, what was once one group became many. In the process, developments elsewhere on the net were reflected in the groups as they were created, most notably the change to place all of the ham radio groups in one hierarchy.

The collection of newsgroups continues to grow as more people join the net, and as more topics of discussion gain volume, I expect to see more groups be created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the notable exception being rec.radio.swap. There are also a few mailing lists that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them, and not to the groups that aren't. The whole idea of having different

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

This is most assuredly not true.

When I passed my Advanced in 1972 (at age 14) I did it by memorizing
the answers to the test guides along with a little bit of knowlege.

I didn't know very much then.

Still don't sometimes.

: is that gets people involved in this.

: -Dave

My own enjoyment comes from trying to see how efficient I can be during the
contest. It's the same kick I get operating at the bottom of a pileup
when I've been a DX station(same skill set..) It also happens to be
great practice for emergency services stuff. The best contesters make
the best net control stations(so there is a direct tie-in to the basis
and purpose in part 97!) If I operate CW, it goes along way to honing
my CW skills, i.e. getting my speed up.

So, all-in-all, there is a lot of practice available that is useful in
other aspects of amateur radio, and it happens to be fun.

Let's say you happen to be on the technical side of things. DX contests
might be appealing as a way to measure how well you latest technical
tweak works. Again, this fits right in with another aspect of the
basis and purpose, i.e. improving your technical ability.

Lastly, you mention that this might be a huge waste of spectrum..well,
as they say, beauty is in the eye of the beholder.

3528. Elitist attitude against No-Codes

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-17 20:25:59 UTC
From: gcortevi@nyx10.cs.du.edu
Message-ID: <3kcr8n$ler@nyx10.cs.du.edu>
Source record: 250676

After reading this newsgroup for a while, I feel I should make a couple of comments. It seems as though there are an inordinate number of people out there who feel that the No-Code Tech is a Know-Nothing Ham. The recent thread concerning correcting another Ham's misunderstanding of propogation is a perfect example. I find it to be a shame that people must measure how far they've come by putting others down. That seems to be the attitude around here. On a local repeater I even heard somebody say, "Next thing you know there will be a way that my dog can get a ticket."

Its remarks like these that makes me wonder what is keeping this hobby alive. After some careful thought, I realized that is is in fact those that go through the trouble of educating others, rather than laughing at them, scoffing at them, and posting about them. This is the true essence of Amateur Radio. Those of you who put down the new hams with your "Back in my day" horror stories of testing seem to have lost sight of this. Sure, the No-Code Tech license is easier to get than licenses in the past. But is that the fault of the Tech's? Are they not worthy of a license because they didn't take the test 5, 10, or 20 years ago? Are they not worthy of the license because they haven't passed a Morse Code test, yet? Many Techs are brilliant people in their profession and enjoy broadening their horizons via Amateur Radio. Don't slam the door in their face.

The license has probably helped more than some are willing to admit. It has pumped a new life into the hobby, from my understanding. Many Tech's get the license to see if there is anything interesting on the Ham bands. Those who get hooked, advance from there. Those who don't, leave it at that.

Is a person holding a Technician license necessarily stupid because they can't recite the laws of propagation? Are they worthless because they can't go into great detail about certain circuit fundamentals? I would invite those of you who take this information for granted to get off of your soap box and spread the knowledge instead of complaining about the testing system. Also, remember that no matter how much you know, there will always be somebody out there that knows more...Guaranteed! Does that make you less of a person?

I have yet to see a testing book that goes into great detail about the underlying principles behind the answers on the exams. Ultimately, I think this would be the most effective way to study for an exam and even retain some of the information presented within. However, there is also *NO* substitute for on-the-air practice and talking with the Pro's who are willing to teach. This is the greatest strength behind the No-Code

Tech license.

In conclusion, a hearty congratulations goes out to all the recently licensed amateurs. A hearty thank you goes out to all the old timers who are willing to teach the new comers. Your efforts are what keep the service alive. And finally, I would like to ask all of those doing the complaining about the "Know-Nothing Techs" to please follow suit. Its a shame that one must inflate their ego by putting down others, and at the same time push the responsibility of education off to their neighbor. It is this elitist attitude that is most destructive.

KB8WFV

(Not bad for a No-Code Tech like myself, eh?)

BTW... I would invite those who are interested in teaching or learning to look for the opening of my BBS in about a month. It will be based in the Detroit Metro area (810) and carry A LOT of information on many topics. There will be sizable Ham message and file areas. I will post more information as the system nears completion.

Flames to /dev/null, please.

One BIG feature, IMHO, is the $40 extended warranty on the RS handies. You
have to have experienced the pain ($$$) and aggravation (shipping, etc.)
of sending a japanese radio to the left coast to appreciate the "just drop
it off at any RS, anytime" service.
Check it out!
73 de WF3E

One minor nit. Warranties cover defects in materials and workmanship.
The Tandy Service Plan covers Service. If it needs service, it's covered.
It's a great selling point if/when you go to sell the radio.

(Yes, I work for RS part-time)

Hi,

There has recently been a situation where a ham in California used a
poice channel with his modified 2 meter handheld to signal for help.

He has received support from the FCC on his use, however, the police
impounded his radio and he has been unable to get it back. The locals
read the rules their way and the FCC's rules don't seem to matter.

I would recommend you use the pone if at all possible or an autopatch
thru a ham repeater to signal for help.

The idea being: you are absolutely right, you can operate out of band,
but you have to be ready to defend against charges by non-hams in
doing so. If you have the bucks for a lawyer, by all means do so,
otherwise don't use the police band.

The main complication is that the rig was modified (perfectly legal
for a ham to do) to listen but you better be very sure of your
position, which is, no other means of communication was available.

With regard to FCC declarations of emergency: these are rare and
usually have to do with major emregencies. Even then only certain
stations will be authorized to yse these frequencies. Most hams will
not be allowed on them and you will get tagged if you do.

Check out the new WWW site of the American Digital Radio Society
(ADRS) at: http://www.iea.com/~adrs which has many, many
hyperlinks to other amateur radio web sites, organizations,
clubs, individuals and other ham radio resource on the Web!

3532. 1x2 & 2x1 Calls

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-17 21:53:59 UTC
From: bob@raddev.com
Message-ID: <3kd0dn$9im@caesar.ultra.net>
Source record: 250677

I posted an article last week offering listings of the
available 1x2 and 2x1 calls in any district.

Please:

If you send a floppy for all the listings, please format
it and VIRUS check it. I already got one with FORM VIRUS
and one with MONKEY VIRUS. Good thing I run Norton Anti
Virus. 3.5" or 5.25" 1.44M,720K, or 1.2m in the case of 5.25".

Dont send me any money. I've returned all the dollar bills
and IRCs. You'll get a Radio Devices catalog and that is
my "payment". Maybe you'll see something on it you like....

Send business size SASE and if you send a floppy, please
send a SASFM (self addressed stamped floppy mailer). Floppy
disks werent meant to travel in an envelope with .32c postage.

BTW, I didnt weed out the calls that arent in the continental
US like WP1* or KL1* etc.... I havent seen anything that says
you cant pick one of those. They arent in the US according to
DXCC, but according to the ITU I think they are?

If this premise is true, then no one who ever got a First, Second or
Third Class Radio Telephone Operator license from the 1950's through the
late '70s ever had to know anything, either. The FCC made available
sufficiently detailed information on the content of the exams that
entire Q&A handbooks were published and sold by the tens of thousands.
Additionally, because of the FCC requirement at the time that the "control
operator" of a directional AM broadcast station had to have a 1st Phone
even if the station was less than 10 KW, a number of "schools" were
established that, for a fee, would run an applicant through a three-day
"crash course" so he/she could get a 1st 'Phone and "change the pattern"
at a directional AM station. And who were these applicants? *Disc
Jockeys* who knew *nothing* about electronics and *didn't care* to
know anything, *BUT* directional stations could use them instead of
legitimate 1st Phone licensees and kill two birds with one stone: for
one paycheck a week, the station got both a jock *and* an "authorized
control point operator and pattern changer." The real "operator" was
usually a contract 1st Phone licensee who was available "on call" if
something *really* went wrong.

In similar fashion, there are a number of companies which currently
publish *complete question & answer guides* to FAA pilot written exams
(and for those who like to bash the amateur VEC program, please note that
the FAA no longer gives FAA written exams; they are done by private companies
specifically authorized to administer exams, the same as with the FCC
commercial exams {which FCC no longer administers}. Also, take note of
the fact that the FAA almost never administers pilot flight tests except
for Air Transport Rating; these tests are administered by *Designated
Examiners* (DEs) who are experienced flight instructors authorized by
the FAA to administer flight tests (and charge fees for doing so).
Sound familiar?)

Note also that there are "weekend" courses for those wishing to
pass the FAA Private, Instrument, or Commercial written exams. The
only saving grace with the FAA writtens is that, during the flight test,
the DE is free to cover any material already covered on the written,
although if you scored 90% or better on the written and answer the DE's
first few questions satisfactorily, you won't be asked much more if
any. On the other hand, if you barely passed (with a 70%, say) you can

expect a thorough grilling by the DE.

FCC Commercial exams have no parallel to the FAA flight test, but
if your facility (radio station or whatever) is ever inspected by an
RI you can expect him to "test" your competence as a licensee.

>: when I got my license in 1978, you had to go to the FCC field office
>: and face the man with the white shirt and black tie proclaiming "So,
>: you want to be a ham radio operator, I don't think so!" You had to
>: LEARN it to pass the test. 73, Dana, AJ1R.

This is complete, unadulterated hogwash. I have been in the FCC office
a number of times to take amateur and commercial exams, from as long
ago as 1958 to as recently as 1976. I have *never* been intimidated or
felt "threatened" by an examiner. They have been universally businesslike,
efficient, and generally humorless (but after all, you were there to *take
a test*, not joke around). They were also absolutely dispassionate as
to whether an applicant passed or failed. And having proctored many
enlisted rating exams in the Navy during my 14 years of service, I can
assure you that I adopted the same demeanor as a proctor.

>This is most assuredly not true.
>When I passed my Advanced in 1972 (at age 14) I did it by memorizing
>the answers to the test guides along with a little bit of knowlege.
>I didn't know very much then.
>Still don't sometimes.

For the record, I prepared for my Novice (1957) and General (1958)
by *memorizing the ARRL License Manual*. It may be little easier
to do nowadays with complete Q&A sets, but it was done then as well.
I didn't really *learn* electronics until I went in the Navy, and I have
to say that studying for my 1st Phone and Amateur Advanced was sure a
lot easier after I *knew* something, but I *STILL* used the License
Manual and Q&A guides as a large part of my study regimen. (Got my 1st
in '72 and my Advanced in '76).

I think it is more the case that there are a few people out there who feel that way and also insist on letting the rest of us know about it! I like to believe that the majority are more even-minded than that. One factor that it's good to keep in mind is that since this topic of discussion is a never-ending one, after a while the only folks left talking are those with an ax to grind---the rest of the group has decided that there's no future in trying to change the minds of the disgruntled.

The cost is $21.00 extra for the plate. There is no recurring fee after that. You pay once, and that's its. Don't think they use a slash thru the zero, but could be wrong. As far as breakins, don't think the general public really knows what it is. It takes about 3 months to finally get the plates after ordering. Not bad really.

I would like to get in touch with anyone out there who is using computer control of a Kenwood TS-440S. My manual makes mention of a required IC-10 chip which I understand. But elsewhere a IF-232C is mentioned which I don't understand. Is the IF-232C necessary and what does it do? Is the whole process worth the bother and expense considering the apparant limitations of computer control in this rig? Any input would be appreciated.

Propagation Forecast Bulletin 13 ARLP013
From Tad Cook, KT7H
Seattle, WA March 17, 1995
To all radio amateurs

SB PROP ARL ARLP013
ARLP013 Propagation de KT7H

Solar activity was down last week, with solar flux an average 8 points lower than the previous period, and one day with a sunspot number of zero. The geomagnetic A index hit 28 on March 12 and 13, which indicates very disturbed conditions. The K index went as high as six during that period.

Solar flux is expected to rise to around 90 on March 20 or 21, the drop back to the low eighties, and back to 90 on April 3 or 4. Disturbed conditions could return on March 27 and 28 and again around April 9.

Sunspot Numbers for March 9 through 15 were 22, 0, 11, 26, 35, 37 and 29, with a mean of 22.9. 10.7 cm flux was 78.4, 79.1, 76.1, 76.2, 77.5, 79 and 81.1, with a mean of 78.2.

The path projection for this week is from Omaha, Nebraska and New York City to Cayman Island.

From Omaha, 80 meters looks good from 0000z to 1200z, and 40 meters nearly around the clock, with the best time on 40 from 0030z to 1100z. The weakest period on 40 meters should be from 1600z to 2000z. 30 meters also looks excellent around the clock, with a weak period around 1230z and the strongest signals from 0000z to 1200z. 20 meters looks good from 1230z to 1400z and from 1700z to 0230z. 17 meters should be open from 1400z to 0100z, and 15 meters from 1530z to 2330z. 12 meters has a strong probability of openings from 1630z to 2200z, and 10 meters may be open on some days from 1730z to 2200z.

From New York, check 80 meters from 2300z to 1200z and 40 meters from 2030z to 1430z. 30 meters should be best from 2330z to 1100z, with openings around the clock. 20 meters should be best from 1200z to 1430z and 2030z to 0130z. 17 meters looks good from 1400z to

2330z, and 15 meters from 1600z to 2100z. 12 meters may have an
opening from 1600z to 2200z, and 10 meters around 1830z to 1900z.

ARLB024 NTIA releases report

ZCZC AG90
QST de W1AW
ARRL Bulletin 24 ARLB024
From ARRL Headquarters
Newington CT March 17, 1995
To all radio amateurs

SB QST ARL ARLB024
ARLB024 NTIA releases report

The NTIA has released its Spectrum Reallocation Final Report as required by the 1993 Omnibus Budget Reconciliation Act (OBRA). The OBRA sought to make spectrum presently allocated to the federal government available for nongovernment use.

In its preliminary report, the NTIA had proposed to make 2390 to 2400 and 2402 to 2417 MHz immediately available with 2300 to 2310 MHz to be available in 1996. These bands are allocated to the amateur service on a secondary basis. The ARRL and other amateur interests objected to any reallocation that would diminish the usefulness of these bands to amateurs. The principal users of 2400 to 2450 MHz are industrial, scientific, and medical (ISM) devices such as microwave ovens, the amateur service, and nonlicensed devices operating under FCC Part 15 rules.

Based on the public comments, the NTIA has concluded that subdividing 2400 to 2450 MHz into three parts, as originally proposed, would not best meet the needs of the principal users of the band. The NTIA Final Report says, ''Reallocating the entire 2400-2450 MHz band would provide the FCC with the opportunity to develop a long-term regulatory framework and strategy that meets the needs of the amateur service and addresses the requirements of a robust and growing Part 15 industry.'' The action, according to the NTIA, ''creates a sense of stability regarding future non-Federal use and provides the opportunity to have a significant amount of spectrum for long-term development of non-licensed technologies.''

As reported earlier, in a parallel proceeding, ET Docket 94-32, the FCC decided to make 2390 to 2400 MHz available for Part 15 use in addition to the existing Part 15 band of 2400 to 2483.5 MHz. The FCC has identified no additional services to be introduced into the 2390 to 2450 MHz band, and none are recommended in the NTIA report.

The relative status of the amateur services and the nonlicensed Part 15 devices is the subject of a further FCC notice of proposed rule making in Docket 94-32.

The NTIA has accelerated the schedule for making 2300 to 2310 MHz available for additional non-Federal use, to August 1995, but with airborne and space-to-Earth links prohibited and commercial applications limited to less than 1 watt of power. Continuing amateur requirements for 2300 to 2310 MHz are detailed in the NTIA report. The FCC has as yet made no determination regarding possible new uses for the 2300 to 2310 MHz band.

The complete text of the NTIA Spectrum Reallocation Final Report is available by connecting through the Internet to http://gopher.ntia.doc.gov or to http://www.ntia.doc.gov. More information will be in May QST.

SB QST @ ARL $ARLB025
ARLB025 Amateurs get 219 MHz

ZCZC AG91
QST de W1AW
ARRL Bulletin 25 ARLB025
From ARRL Headquarters
Newington CT March 17, 1995
To all radio amateurs

SB QST ARL ARLB025
ARLB025 Amateurs get 219 MHz

The FCC has released a Report and Order in ET Docket No. 93-40, allocating the 219 to 220 MHz band on a secondary basis to the Amateur Service for point-to-point fixed digital message forwarding systems. The allocation had been requested by the ARRL as partial compensation for the loss of the 220 to 222 MHz band.

When the new rules take effect, on a date that has not yet been announced, Technician and higher class amateur licensees will be permitted to use digital emissions of up to 100 kHz bandwidth and no more than 50 watts PEP output. The primary occupant of the band is the Automated Maritime Telecommunications Systems (AMTS). To protect the primary occupant, the ARRL has been designated as the national contact point for all amateur operations in the 219 to 220 MHz band and is responsible for maintaining a database of all amateur operations in the band. All amateur stations must notify the ARRL at least 30 days prior to initiation of operations in the 219 to 220 MHz band. Amateur stations within 50 miles of an AMTS coast station must obtain the written approval of the AMTS licensee prior to operating. Amateur stations within 398 miles of an AMTS coast station must notify the AMTS licensee in writing at least 30 days prior to initiation of operations. The ARRL will assist amateurs in fulfilling these requirements. Amateur stations operating in the 219 to 220 MHz band are not permitted to interfere with, nor are they protected from interference by, primary service operations in and adjacent to the band.

The FCC action climaxes almost six years of effort by the ARRL. For additional background see May 1993 QST, page 9. Full details will appear in May 1995 QST.

```
Z(> Interestingly, according the the Andrew catalog, N and HN connectors have
Z(> the same *power* rating at 900 MHz, 0.6 kW, even though HN connectors have
Z(> twice the DC test voltage rating (4 vs 2 kV). Doesn't look like N
Z(> connectors will handle the legal limit on 23 cm--are there special versions
Z(> available?

From what I remember at work we use HN's on some 3dB couplers combining two
500w Band II amplifiers. So there is just under 1KW through them. N's tend to
be used up to about 500 watt and then they now use a 7/16" screw connector at
1 KW or 2KW (depending on how many 500w amplifiers combined) - but not sure of
the proper name of that connector, we just call them 7/16's.

>
There is still a "Radio" merit badge in addition to the "Communications"
badge. (I don't guarantee the accuracy of all this as my son just joined Boy
Scouts a week ago and I've only looked briefly at the requirement book
once). The Radio badge has 3 tracks... one for broadcasting, one for SWL
and one for ham radio, with a set of requirements for each - the boy
chooses which one he wants to do. The ham radio track requires learning CW
and making some HF contacts as well as collecting a few QSL cards. The
Communications badge, on the other hand, which I think may be an Eagle
required badge, deals with such things as public speaking, letter writing,
resume writing etc and has nothing to do with radio at all.

Can someone direct me to a/the source for the computer program
Geoclock which shows a series of maps with the current time displayed
in various cities, both USA and in other parts of the world?

Is it commercial software, shareware or what? Where does one obtain it?

Thanks in advance.

: way. You got a few bucks you lost a good customer. Adios

I got the Frequency Counter with this plan and took the entire time to pay it off. NO problem.

I would call a store near you and get the district managers number, call them and if you get the run around ask for THIER supervisor. I have seldom had to go up much higher than two levels of management to get my bitch heard.

Don't let them pull anything over on you. We spend LOTS of tax dollars on consumer law. DEMAND an accounting to your satisfaction.

chris@bris.ac.uk (Chris Railton) says:

>>I must say that more often than not if I tune around 14MHz at a
>>weekend there is nothing else but people shouting "contest", usually
>>with no regard for other operators such as SSTV on 14230. It makes
>>the band unusable for anything else too often. Why not have a contest
>>free zone on each band where other interests can be indulged?

The first sentence is incorrect - if you listen on e.g. 20m SSB
the number of weekends with major contests is small, you just
remember them, that's all.

There are contest-free zones. Apart from a very small number of
contests, if there is a 'phone contest on, the whole of the CW band
is contest-free, and if it's a CW contest, the whole 'phone band is
available. The WARC bands (12, 17 and 30m) are free of contests at
all times, including weekends.

Personally, I wish there were ragchew-free zones, I find ragchewing
going on at all times on all modes and on all bands; it's not my
thing, just as contesting apparently isn't yours - I deal with it,
and I'm sure you can too.

i have a question about call assignments. i received my conditional
license (wb5thj) while stationed at guantanamo bay (gtmo), cuba in 1975. the
prefix assigned to gtmo was kg4. when they started the kxnxx series for
advanced, what did they do about florida, leave out the kg4's there? also
i notice on this list there's no separate listing for guantanamo.

side note: when i upgraded to advanced, i felt like i'd come full circle
since i started out with a kg... call from the club station at gtmo.

just wondering. tks for any info.

3566. QSL label software?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-18 08:47:19 UTC
From: garyk9gs@solaria.mil.wi.us
Message-ID: <3ke6mn$mq5@hummin.sol.net>
Source record: 250558

I have been searching for software that will print multiple QSO records on QSL labels, just like one sees on DX-pedition QSL's. Does anyone know what is used or am I forced to roll my own? The best alternative that I have seen would be to write a custom database in Microsoft Access and load CT res files into it. Any other ideas before I re-invent the wheel?

It would be ideal to be able to do the following:

1) Import logging files from CT or other logging programs.
2) Enter in a callsign and have the database searched for all instances of that callsign.
3) Tag some or all of the results and have QSL labels printed with a selectable number of QSO's per label.
4) Mark those QSO's as being verified.

Thanks for your ideas!

People are commenting on how un-controllable the start of WWII was
for both Germany and the United States.

Techneques used to provoke a war are the use of radio waves to
broadcast "sounds" and to follow people and events just like CNN does,
but they do not stop until a war starts.

Juvilile delinquents and Ayrens are blamed and a techneque that
broadcasting uses to follow "turf" wars and Blonde and Brunett problems
are played up.

Mass parinoia and people starting to get MADD and run around
with red ribbons is surely the start. Robbing peoples thoughts and
over survailance and sexual harrassment.

A Blonde biker gang and a Brunette biker gangs wars about
Robbing thoughts and telepathy is the start of World Wars. The blondes
are supposed to be following the brunettes and the brunettes killthem.

3574. Re: Considering a Surge Protector? Lydia's Spam Continues....

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-18 14:57:52 UTC
From: lydiapolk@aol.com
Message-ID: <3kesdg$adb@newsbf02.news.aol.com>
Source record: 250569

To all,

Jeff Benkel <jbenkel@primenet.com> recently "saved" all of you
from "me" and my alleged "hidden" agenda to expose improperly
designed surge protectors. A further look into Jeff's tainted
response is in order.

Any good trial lawyer knows that if you don't have the facts on your
side then you simply ignore the facts and disparage your opponent
with half-truths and inuendo. This keeps your attack off-point and
keeps your opponent in a defensive posture from which he can't win.
Jeff argued no facts.

Before I destroy all of Jeff's "points," lets take a quick look at the
inuendo he used.

>spam

Sorry, Jeff, but all the newsgroups in which I posted my 2-line notice
about the availability of my article were appropriate newsgroups for
this posting. The topic was related as all these newsgroups are
inhabited by technical type people that would appreciate technical
details in my article.

Furthermore, the article simply exposes parallel mode devices such
as the MOV as the cause of surge problems, not as the solution to
them. If someone wants to pursue learning more about a series mode
protector, he writes me for further info. If he doesn't want to pursue it,
he deletes the article.

The article mentions no brands of improperly designed units. It does
mention that ferroresonant transformers work. They've been around
for decades. And it mentions no name brands of properly designed
series mode products.

>40 newsgroups

Jeff's implication here is that if there are 40 appropriate newsgroups
out of 8,600, that it's not OK to post a 2-line notice about the
availability
of my article to those 40. This is absurd on its face.

And by the way, Jeff, although this is irrelevant, the 2-line notice
wasn't
posted to a fraction of the 40 that you claimed. And the 2-line post
about the availability of the article was totaly appropriate for the
interests of those in the newsgroups in which I did post my 2-line notice.

>outfit called Zero Surge

Nice try Jeff. "Outfit" is one of the slickest forms of inuendo. It's subtle
but still disparaging. It's also interesting that you said this right after
claiming that your "company" was a world leader in surge suppresson devices.

Your company is a "company" while your competitor is an "outfit."
Good try Jeff. Classic inuendo.

>Don't be taken by this spam.

What you've done here, Jeff, is mix two different things. Although my
2-line notice about the availability of my article is not a spam, even if
it were, arguendo, then you'd still be confusing the effectiveness of a
product with the number of newsgroups it was posted in. There is no
relationship between the two, Jeff. You obviously know this. Nice try,
though.

>Now that my bias is out in the open, I feel the need to inform the 'net
>about the spam above.

Oh, I see, Jeff. Once you admit that you are a competitor then it's OK to
disparage your competition with inuendo but with no facts. You did it again,
Jeff. You refer to "the spam" again. Mixing again, Jeff. Spam and product
effectiveness are two completely different issues.

The real problem your comments, Jeff, is that my 2-line notice was not
a spam and that MOVs do cause common mode spikes.

>line to neutral protection scheme

Nice try at inuendo Jeff. First of all, "line to neutral protection" is so
conveniently vague that there are no specifics to respond to. And secondly
it's not a "scheme." "Scheme" is one of those slick words that lawyers like
to use to disparage (by inuendo) anything they don't like and can't attack on
the facts.

Jeff, now for your attack on the few alleged "facts" you purport to raise:

>What you need to know is that this scheme does not meet ANSI or IEEE
>specs,

Zero Surge has a UL 1449 rating: 330 volts peak let-through. This is the best
rating for UL 1449. UL uses ANSI and IEEE specifications to test products.

Jeff, you did an excellent job of identifying your company, its product line,
some of its various models and its marketplace. This is a real fact. I

wasn't
advertising in a newsgroup. You were. Fact.

Jeff, when you say that the inventor, "was literally laughed out of the conference," what was the name of that conference? When was it? Were you there?

For your information, Jeff, the inventor of serids mode technology, J. Rudy
Harford, has over 38 issued patents in the U.S. and 300 patents worldwide. Harford is a sought after speaker who recently read two papers at the National Power Quality '94 Conference in Dallas last September. His most recently published article appeared in the September 1994 issue of EMC Test
& Design magazine.

In addition, Harford is a member of the Underwriters Laboratories Industry Advisory Group for UL1449, a position reserved for acknowledged experts in the field.

Harford was named "Inventor of the Year" for the Series Mode invention in 1991 by the New Jersey Inventors Congress and Hall of Fame.

Jeff, are you telling me that the inventor, this one J. Rudy Harford was "literally laughed out of the conference?" I don't think so Jeff.

Sorry Jeff, but the author of the PC Magazine article apparently has no understanding of where common mode spikes originate. (He should read my article.) His emphasis on the old myth of common-mode protection isn't uncommon. Once people read my article they realize that on a dedicated branch circuit, common mode spikes are "caused" by parallel mode "protection" devices such as the MOV.

So in summary, a spammer is anyone that Jeff doesn't like, specifically a competitor. Jeff, I think if you'll check around, you'll find that you're way
off-base on the definition of spam.

And even if something were spammed (not the case here), it still has nothing
whatsoever to do with the product's quality or effectiveness.

Jeff, you'll also note that I said absolutely nothing disparaging about your
company. That was never the point except with you. In my article I did expose
the facts behind parallel mode surge suppression. This article has been read
by thousands of people, many of whom are engineers. It's been published in several local PC journals (I'm looking at the St. Louis one) and many ham radio newsleters. I have gotten hundreds of compliments from engineers about
this article. It's rare that a week doesn't go by without someone asking

permission to reprint it in a newsletter.

Jeff, you may not be aware of this, but many technical articles are written
by engineers of manufacturers. Is this considered advertising? Absolutely not. Does it generate sales for their companies? Absolutely yes. It's been this way for centuries. And you're the first to ever call this "spamming."

One last point about series mode protection, Jeff. The largest manufacturer
of surge protectors in the world, American Power Conversion, stated in writing, "The best type of surge suppressor uses a 'series' or isolating design." Jeff, I'm looking at it right now so don't tell me they didn't print it.

I've gotten less than 5 people whining about my article. And all their questions were answered by me by private email since they contacted me by private email. Sorry Jeff, you're out-voted, and by people that know the facts.

Perhaps in the future you will respond by private email before sticking your
foot in your mouth. If you had, I would have discussed the facts with you by
private email too. Then your hidden agenda, unscrupulous tactics, and blatant advertising for your own products on a newsgroup wouldn't have been exposed for all to see.

The only reason the name Zero Surge is mentioned in this letter is because you brought it up and you openly disparaged it within this newsgroup.

Jeff, the president of your company, Mr. Rocky Kansal, has been notified by
fax about your unsubstantiated and disparaging statements. Good luck.

I am not even a ham, yet. And I should know better than to lodge my nose in a vise over an issue like this. Still, one of the central reasons for gov'ts to allow amateur operators is to insure a knowledgable force of radio operators in case of war or other national emergency. Ham contesting goes a long way in training operators to most effeciently build, maintain and operate a good station under frantic conditions. I personaly feel that this is a good thing. Others may

place it differently on their "Patriotism to Paranoia Nomograph."

I've been using a mag-mount Hustler antenna for some time, but find it inconvenient to remove it every time I want to pull in the garage. Also, (standard gripe #2!), it's starting to mark up the paint on the top of the car (Taurus wagon). I'm looking at using one of the thru-glass 2M antennas, running ~ 25W.

Can anyone give me some recomendations/results about some of the 2M thru-glass antennas. I realize they're not as efficient as some of the better 5/8w antennas, but we've got pretty good coverage for the repeaters down here in Austin.

Any info would be appreciated. Please respond to any of the addresses below. If I get sufficient response, I'll post a summary.

THanks

I thought you guys might get a kick out of this -- I lived in
Louisiana about fifteen years ago, when I first earned my ticket.

Well, I put up a dipole in the backyard, but I didn't runa ny coax
to it. (The coax was on order.)
Anyway, one of the TV stations went way down in power due to a light-
ning strike, and I immediately got three calls telling me that I was causing
TVI! Still with no coax to the antenna...

TS> I just failed my 12wpm (german)cw (HF upgrade)exam. I have no
TS> problems copying random characters (grouped by 5) but with text in
TS> clear I loose the line much faster, maybe by trying to make sense
TS> out of the text just written or by guessing the next characters of
TS> the current word.

Theo,
Your experience is typical and it follows your initial CW learning
when you probably were counting dots and dashes in order to
learn the letter or number.

A good way to learn to copy language is to begin to recognize
the sound of short common words as an entity. In English,
examples are THE, BUT, AND, FOR, WITH, to name a few. I would
guess that in German such words as UND MIT ODER HIER DAS VOR DIE
ABER SEIN ICH KANN would be similar examples. You will find that
as you recognize these as words instead of their letters, the
longer words are then easier to copy behind because you have
formed the habit of copying behind with the short connecting words.

>The other way to pass is to answer 7 or more of a 10 question test. Some

My experience is slightly different. For my 5wpm there was no option for questions. Had to get 25 straight correct. Took my 13wpm twice. First time was fill in the blank, 2nd time was multiple choice...& was luck enough to get 10 of 10.

It was great to pass, and for me not easy. That is i worked/practiced pretty hard at it. For those with a more natural ear for cw, god bless em. Now where's that advanced study pool...:)

I wonder if the letter from Greenspan was legitimate? It seemed very to
be a poorly written document, not at all professional.

I do not find the "attitude refreshing" either. The culprit may be an
annoying person but Greenspan can not seriously expect us to believe that
one can lose a license simply for being annoying (writing stupid
letters!).

One cannot lose the license for not being a "good citizen", the FCC will
take the license for breaking laws!

3588. Advice to TS 940 owners

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-18 19:44:51 UTC
From: turner@safety.ICS.UCI.EDU
Message-ID: <14875.795555804@safety.ics.uci.edu>
Source record: 250482
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Just finished my Fan project here on my 940. IF your fan is getting loud and is old, I might recommend a replacement motor (pretty easy installation) or at least a good single drop of teflon lubricant to the shaft. If it is old, I recommend replacement ($27 from Pacific Coast Parts) since mine just "stopped" without warning and since there is a thermal switch, I didn't know whether it was off because the power supply was not yet hot or if the fan was broken. Well, the motor just wasn't spinning up. Result: two shot pass transistors on the power supply and some down time and concern about my radio. The transistors are not expensive (well, if you have Kenwood do it they are more than double the going price, but $12 apiece for two of them is not a killer), but the heat generated can do other damage.

The other thing I have done to prevent future problems is to put a resistor in the thermister line to keep the fan running on low speed at all times. That way the power supply stays within a narrower temperature range for more of the time, AND I will KNOW if the fan circuit has a problem, since I won't hear the fan at all. This little mod was courtesy Tom, K2CZ, and involves a 2.2 K 1/2 watt resistor across the leads of plug 13 on the AVR board. (ONLY do this if you have some solid electronic knowledge and basic understanding of the radio, PLEASE! Don't hurt your radio or yourself!)

> in other countries have gotten hooked on this.
>
Dave - contesting is an addiction like many others...it grows on you slowly the more you do it. I got started in contesting since I'm a DXer and found that one could work many countries very quickly in a contest. I stumbled across the CQ Worldwide phone contest one year shortly after I'd upgraded from novice to advanced, not knowing what it was, and was amazed at how much DX there was to be had. Yea, it seemed stupid to spend time trying to work people and say nothing more than "59-04 thanks" before moving on to the next one. But the idea that I could work about 20 new countries in just a few hours was real appealing to me since I was already working on DXCC at the time.

I moved on to domestic contests (e.g. the sweepstakes), partly as a tool to complete Worked All States and partly to increase my code speed so I could pass my extra (and get access to all the juicy DX that hangs out in the extra-only band segments!) As time went on, the competitive aspect of it started to grow on me, not to mention the fact that contesting taught me pile-up breaking skills that transferred well to chasing DX, which is still my first love in ham radio.

So for me it started off being a tool to accomplish some specific goals and grew into something more - kind of like a lot of people who spend endless hours hanging out on the Internet, I think! Different people I'm sure could tell you different stories, but that's how it was for me. Hopefully this answers your question. 73 - Alan NS0B

N9US Special Event Station
Naval Air Station Glenview
"Last Flight Out"
February 25-26,1995

Thanks to all of you who made contact with the N9US Special Event Station at the end of February. We made close to 1,400 contacts, using CW, SSB, FM simplex, 2M packet, RTTY, SSTV, and FSTV. All bands from 160 meters to 440Mhz were covered. Fifty operators from Lake County RACES/ARES and the North Shore Radio Club helped out it pulling this off.

The sad part of the whole event was to see the last three Navy Orion P-3 planes take off, never again to touch down at NAS Glenview. Many of you indicated you were former Navy, having been at NAS Glenview in the past.

Our thanks to Capt. James Schultz, USNR, Commanding Officer, NAS Glenview. Without his help and efforts, the special event would not have taken place. By the way Capt. Schultz is WH6AFV and you may have worked him.

If you have not done so yet, please send us your QSL card and SASE (9x12) for your special event certificate. They are printed and await for you.

Send your QSL and a self addressed, stamped envelope 9 x 12 to:

Lake County RACES/ARES Group
1303 North Milwaukee Ave
Libertyville, IL 60048

We would appreciate receiving them as soon as possible. As of today (3/38/95), we have only received QSLs for about 450 certificates. So there is a lot more out there to come.

Again thanks to all you out there. Because with out the hams making the contacts with us working the event, it would not happen.

73's Don N9IHW ** N9US Special Event Chairman

RAC AWARDS MANAGER APPOINTED

Dave Goodwin VE2ZP/VE9CB
RAC HF Contest Manager

Russ Wilson VE6VK, of Calgary, has been appointed RAC Awards Manager. An active awards hunter and Dxer, Russ is well-known worldwide for his IOTA (Islands on the Air) activities and for the past several years has resurrected and administered the Calgary Stampede Award, which attracts applications from around the world. Russ succeeds former Awards Manager, the late Bill Butterill VE3MNW, of Kingston.

"Honouring our achievers is a vital process of recognizing and rewarding our fellow amateurs for their contributions and accomplishments, both at home and abroad," said RAC President Farrell Hopwood VE7RD, in announcing the appointment.

The RAC awards program comes under the direction of RAC 1st VP, Tim Ellam VE6SH.

NEW SPONSORS FOR TROPHIES IN RAC CONTESTS
Dave Goodwin VE2ZP/VE9CB
RAC HF Contest Manager

Four Canadian businesses have stepped forward to sponsor plaques in RAC's two annual contests, the Canada Day Contest and the Canada Winter Contest. Atlantic Ham Radio of Downsview, ON will sponsor the plaque for the top-scoring Single Operator entry. Durham Radio Sales and Service of Oshawa, ON will sponsor the plaque for the top-scoring Single Operator Low Power entry. H.C.MacFarlane Electronics of Battersea, ON will sponsor the plaque for the top-scoring Single Band entrant. NORHAM Radio of Toronto, ON will sponsor the plaque for the top multi-op entrant. These sponsorships are for both of RAC's annual contests from 1995 through 1997.

They join Alan Goodacre VE3HX/VE2AEJ, who sponsors a trophy for the top foreign entrant in each RAC Contest. Thanks to all for their confidence in RAC and their support of our contests.

UPCOMING IN APRIL TCA
Rob Ludlow, VE3YE
Editor, The Canadian Amateur

The April issue of The Canadian Amateur features articles on a Dxpedition to St. Paul Island North by the West Island Club of Montreal last summer, a feature on the Renfrew County ARC operation at the International Ploughing Match last fall and complete Canadian 1994 Field Day results.

This month there are also EMC updates, RAC Election results, an enhanced and more detailed HF propagation forecast page, Larry Joe resumes his informative monthly column on Packet Radio, and there are two full pages listing coming events, fleamarkets and hamfests in your area over the next six months.

All this, plus the usual extensive selection of letters, Silent Keys, regular columns, contest and DX reports, Club Corner news, YL News, QUA, ARES, Public Service, Section News, This Month in History, bench and homebrewing tips, shortwave listening, and the Swap Shop - all in the April issue of The Canadian Amateur, coming to your mailbox soon.

LONDON EMERGENCY RESPONSE RESOURCE DISPLAY IN APRIL
Dave Colvin VE3ZDC
District Emergency Coordinator, London and Surrounding Counties

The Amateur Radio Emergency Service for London & Surrounding Counties invites you to "Partners in Response '95", a display of Emergency Response Resources from the London Region. Last year's successful event attracted over 20 agencies with more than 30 vehicles on display.

This year's display is planned for Friday and Saturday, April 7 and 8, at the London Transit Headquarters, Highbury Avenue and Brydges Street.

Friday evening is participant preview night. Saturday's open house runs from 9 a.m. to 6 p.m.

Talkin will be on the VE3OME repeater 145.450, with backup on the VE3MGI repeater, 145.390.

Confirmed participants include: London Police Force, Ontario Provincial Police, London and Chatham Fire Departments, Ministry of Health - Ambulance Communications, St. John Ambulance, Canadian Red Cross, Industry Canada - Communications, Sarnia/Lambton Amateur Communications Bus, Emergency Measures Ontario, Environment Canada, London Air Patrol Inc., Civil Air Rescue Emergency Service - Niagara, Civil Air Search and Rescue Association, Canadian Coast Guard, Canadian Marine Rescue Auxiliary, 424 Search & Rescue Squadron/RCC Trenton, National Search & Rescue Secretariat, Emergency Management Mutual Aid Council, CAER - Community Awareness Emergency Response, Bell Canada, Dow Chemical, University of Western Ontario, Victoria Hospital, CN Rail, and Union Gas. Many others are expected.

Special Interest groups confirmed include: London Transit Historical Society, Amateur Television, Computer Based Packet Ham Radio and World-Wide HF Station.

RED DEER 25TH ANNIVERSARY HAMFEST AND PICNIC

After 24 very successful and enjoyable Red Deer Picnics, organizers hope you will attend this special 25th anniversary at the Burbank Park Campground Northeast of Red Deer, June 15 - 18. Registration will begin on Thursday evening June 15.

This beautiful riverside campground is set in mature trees and features a modern rustic log multipurpose hall. The campground is located just a few minutes north of the city of Red Deer on Highway #2A to the junction of Highway #597. Follow the signs East to campsite. Call in on 147.150 repeater or simplex 146.520.

Here is what to expect:

- Lots of activities, fun, food, and raffles!
- Special events station
- Lots of goodies at flea-market on Saturday
- Hospitality hour starts 7:00 p.m. Friday
- Free radio service and tune up clinic
- Ladies fashion show
- Dealer displays and sales
- Kids games and activities
- Golf tournament Saturday June 17 at Spruce Ridge Golf and Country Club beginning at 7:30 a.m. For golf registration, contact Brian VE6JPW, (403) 346-6305 (after 6:00p.m.), in Red Deer, or leave a packet message with Bob VE6BLD, at VE6BLD@VE6RDR.AB.CAN.NA.

Picnic Prices as follows:

-$ 25.00 per family unit camping fee for the weekend
- private stall, additional $20.00 for the weekend
- $6.00 Saturday evening barbecue with dance to follow
- $3.00 Children under 12 yrs, Saturday evening barbecue
- $10.00 per weekend pass with no camping

- $6.00 per day pass with no camping

For further information, contact: Jim VE6QA, (403) 346-9261 Red Deer, or Bob VE6BLD (403) 782-3438 Lacombe, packet VE6BLD @ VE6RDR.AB.CAN.NA.

UpcomiNG EVENTS WE'VE HEARD ABOUT

March 25. The Upper Canada Amateur Radio Friends are hosting a hamfest at Nativity Hall, 301 McConnell Ave., Cornwall, Ont., beginning at 8 a.m. General admission is $3. For more information, contact Marc Tessier VE3TES, (613) 936-0096. Reach Marc on packet at VE3TES @ VE3MTA.

March 25. The Ontario DX Association fleamarket begins at 9 a.m. at the Trinity Presbyterian Church Hall, 2737 Bayview Avenue, Willowdale. The church is located on the east side of Bayview one light south of Hwy 401. For more information, contact John Grimley VE3RTI.

March 27. Auction Night sponsored by the Scarborough ARC, at Sir William Osler High School, 1050 Huntingwood Drive (just west of Midland). The activities begin at 8 p.m.

April 1. CRA Laval Laurentides at Polyvalente Ste-Therese High School, 401 Du Domaine Blvd., Ste-Therese, PQ.

April 8. Durham Region AR Fleamarket. Metro East Convention Centre, Brock Road, Pickering, Ont. Brock Road is located between Hwy 401 and Hwy 2. Exit Hwy 401 at interchange 399.

April 8. Brownsburg ARC hamfest at Club Sportif Bertrand, 416 Route 148, St. Phillippe, Quebec. For more information, contact Roy VE2GAO (514) 479-6508, or Fred VE2FED, (514) 562-4745.

April 28, 29, 30. Dayton Hamvention '95. At the Ara Arena, Dayton, Ohio.

HOW AMATEURS ARE TREATED IN CANADA
Early days of wireless. Here's a contribution by 'A Canadian Amateur' to the pages of Modern Electrics, January, 1913. Thanks to VE4AG for this item which was recently found on packet.

The American Government has at last passed a law governing amateur installations. Previous issues of this magazine contain the particulars which need not be repeated here. In short, they are few, simple, fair to all, and very lenient as compared with those across the line.

The Canadian Government regards the amateur in a very different manner. His restrictions are numerous, and he is not recognized unless he has paid his license fee, which is, at the present time, one dollar. In obtaining the license, he submits himself to many petty rules and regulations, several of which are nothing less than the proverbial "red tape". After the license comes a "declaration of secrecy", which must be filled out. The notary's charge for this is usually a dollar.

Now let us consider the amateurs' treatment prior to 1912, when licenses were not granted. Any amateur, wishing the protection of the law, had to apply to the Superintendent of the Government Wireless for permission. In answer to his application came a lengthy form requiring a detailed account of his station, to whom he had intentions of speaking, the object of the installation, and numerous other questions along the same line. Upon return of the blanks, permission to install and operate the station was granted. It restricted the wavelength to fifty meters and the power absorbed by the primary of the transmitter to 1/4 kw. On hearing the signal STP from a commercial or ship station, he was required to suspend operations until advice came to cancel the signal. Referring to this signal, I may say that from 1909 to 1912 there was not one operator on the trans-Atlantic liners which docked at Montreal who was aware that such a signal existed, nor was the operator at the Marconi station any wiser.

We shall now take up the terms of a Canadian Amateur License.

(1) He is not to establish, install or operate any wireless station except that which comes under his license;

(2) The apparatus must be used solely for experimental purposes;

(3) The power absorbed by the primary of the coil or transformer must not exceed 1/2 kw;

(4) His wave-length must not exceed fifty meters;

(5) His apparatus must not interfere with the operation of any station in Canada or ship station in Canadian or neighbouring waters;

(6) The Minister of the Naval Service may, at any time, cancel his license; this cancellation comes into force one calendar month after notification;

(7) He must stop all transmitting if he perceives by his instruments that ship stations are operating, and not start again until the signalling has ceased;

(8) If an amateur station is found to interfere with the operation of commercial stations, the license may be at any time cancelled. (At the present time there is receiving apparatus in Canadian Marconi stations, by means of which it is absolutely impossible to tell the difference between a 200 and a 600 meter wave. I refer particularly to the 5 kw. Marconi station at Montreal. This being the case, it is very easy for an amateur to "jam" a station of a similar type and thus lose his license if complained of by the operator at the station.)

(9) Then there is a clause relating to the secrecy of intercepted messages;

(10) Stations, at reasonable times, shall be open for government inspection;

(11) The licensed apparatus must not interfere with the operation of telegraph lines;

(12) Upon the Minister's approval, the license may be assigned or sublet;

(13) If necessary, as might be in the case of war, the Minister may take possession of the licensed apparatus in the name of the King, and use it as may seem fit. Authorized persons may enter the station and remove or operate the apparatus;

(14) As a concluding clause, the breach, non-observance or non-performance of any of the rules and regulations may result in the permanent loss of the license.

VE5 CALLSIGN STATISTICS INDICATE GROWTH

The Saskatchewan Amateur Radio League QSO bulletin reports steady growth in provincial Amateur radio numbers for 1994. The province has a population of 1,006,800 and of that 1246 are hams. OM's outnumber YL's 992 to 119. There are 55 repeaters which is up two over the previous year. There are 23 clubs. In terms of sheer numbers, Saskatoon, Regina, Moose Jaw and Prince Albert have the greatest number of hams, about one-half of the provincial total. Smaller communities like Estevan, Humboldt, Melfort, Nipawin, North Battleford, Swift Current, Unity, Weyburn and Yorkton are all active in Amateur radio.

IARU REGION 2 DIRECTORS MEETING HELD IN FEBRUARY

Directors from Bermuda, Cayman Islands, Haiti, Jamaica, Mexico, Panama, Trinidad, US, Venezuela and Canada met in Miami in early February. The meeting was chaired by Canada's Tom Atkins VE3CDM, Region 2 VP. Farrell Hopwood VE7RD, RAC's President and IARU representative, also attended.

Matters relating to the overall administration of IARU were reported as proceeding satisfactorily. It was also reported that the Region 2 International Amateur Radio Permit is moving along at a good pace and that a vote is expected at the General Assembly of the OAG in Haiti this May which is expected to result in success for Region 2.

Farrell Hopwood reported to the group on the explosive growth of licensed Amateurs in Canada and on the growing strength and stability of RAC.

IARU President Dick Baldwin W1RU, reported on the Region 3 conference in Singapore. The IARU Secretariat's Administrative Council met while in Singapore and firmed up the goal of obtaining a full 3 Mhz of band for 40 metres on a world-wide allocation. According to Mr. Hopwood this will require a lot of lobbying with ITU member societies to make this happen.

Tom Atkins gave a comprehensive report on preparations for Niagara 95 meeting of the IARU. The committee for this conference is headed by George Spencer VE3AGS. Mr. Hopwood extended a warm invitation to all Region 2 member societies to come to Niagara Falls and enjoy the fellowship and preparations of the host society.

IARU Secretary Larry Price W4RA, said that with ITU WRC meetings now occurring every two years rather than every 10 to 15 years as had been the past experience, a very heavy burden is being placed on IARU volunteer resources and it is costing more to fund. He warned that IARU will have to examine the provision of full time employees to meet these new demands, if it

ever hopes to keep on top of events which have a bearing on Amateur radio frequencies and privileges. He said, "IARU is dealing with professionals in government and industry around the world, and there is a need to compete effectively in the management of international radiocommunication affairs if Amateur radio is to survive."

RAC ANNUAL GENERAL MEETING APRIL 23

The RAC Annual General Meeting will be held in Ottawa on April 23, 1995 at 1:30 p.m. at the Talisman Hotel on Carling Avenue, just off the Queensway. All RAC members are invited to attend and meet with the Board of Directors and Executive.

ITS TIME TO GET A NEW HOBBY, WHEN ...
From the August '94 IBM ARC of Boca Raton, Florida

You're talking on the phone with a ham buddy, and you end the conversation with, "KD1HZ clear." - Michael Deigan KD1HZ

You end a face-to-face conversation with "dit." - Paul Flaherty N9FZX

You spend two hours trying to crack a pile-up on 20 meters to work a KJ2 station who is portable in Manhattan.

Your spouse points out that all of your children were born during sunspot minimums. - Paul Valko WB8ZJL

You're enjoying a Saturday breakfast when, to interrupt conversation and ask for the salt, you say, "call please." - Dave Bushong KZ1O

The minute a caller on the phone identifies himself, you say, "You're 5 and 9 in Virginia." - Ben Cline AC4XO

You say things like "QSO' and "73" in casual, face-to-face conversations. - Mike White N4PDY

At the checkout counter you endorse your cheque with your callsign. - James Proctor KE3HO

Your spouse starts talking to you while you're on the phone, and you tell the person on the other end you're getting intermod. - Dave Bushong KZ1O

You tell people over the phone, "I'm at my work QTH." - Fred Davis VA3FD

You name your boat "Sea Cue." - W3OTC

ALARM SYSTEM FOR REPEATER SHACK

The Algoma ARC bulletin reports that their club has approved the installation of an alarm system at their repeater site. The system consists of a smoke and burglar alarm with a 24-hour monitoring to a central dispatch office. With the system, the club expects to see a small reduction in their insurance rates.

The system was made possible thanks to the generosity of a club member who happens to be in the alarm business.

TRIVIA

What country has the greatest number of hams? According to IARU figures, Japan has the most with 1,300,000 licensed operators. The US is second with an estimated 632,000 operators. Canada has more than 41,000, and world-wide there are an estimated 2,600,000 hams.

REPEATER TALES

The best way to keep a repeater on the air is not to talk about it too much! They seem to develop a personality and like their privacy. So says Ted VE3TED and Wayne VE3NK, writing in the Burlington ARC Printed Circuit.

They also encourage their club members to use the tone frequency on their 2m repeater for improved range. Their 440 machine will soon be tone activated as well to help eliminate interference. A modified cooling system for their power amplifier uses a thermally controlled switch to activate the fan.

THE UPCOMING G7 SUMMIT

During the month of June, the Halifax and Dartmouth ARC will operate special event stations CG7H and CG7D to commemorate the G7 Conference in Halifax. The stations will operate around the clock during the conference June 15, 16 and 17. The stations will be on the air on a daily basis throughout the month of June.

All HF bands, CW and SSB will be covered. A special QSL and Certificate will be issued. QSL to VE1FO, P.O. Box 663, Halifax, NS, B3J 2T3. Include postage, IRC or equivalent.

What you are missing is the fact that the letter is in responce
to an alligation that K1MAN has used the US Postal Service to
threaten people and may have falsely represented himself as
under the authority of a federal employee.

Apparently the letters sent to the Federal Attorney's in Maine
also shows some strange behavior.

K1MAN obviously must have some personality trait different
from many of us if he need to broadcast the material that he
does and in the manner he does.

I have always thought that he wishes he could be elected an ARRL
Director and have some important role in amateur radio as he
seems to be looking to make himself and IARN as important as the
ARRL is.

Unfortunately his heavily opinionated broadcasts with barely a
minimal factual informational basis clog up the airways.

73, Bob, WB2DIN

Everybody here seems more qualified than I am, so I would appreciate any advice that can be passed along...

I am shopping around for a hand-held, continous band scanner. I've heard good things about the new AOR AR-8000 and the Yupiteru MVT7100.

Does anyone here have any recommendations? Which is better? Reliability of the AOR, etc? Also, what are good prices for this equipment (I just don't want to be taken). Any stores recommended??

Please respond via e-mail. Any info that is passed along will be greatly appreciated!!! Thanks!!

3609. Ham radio banned at San Diego Zoo ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-19 02:29:43 UTC
From: william@cortex.ama.ttuhsc.edu
Message-ID: <Pine.SUN.3.91.950318201533.22902A-100000@cortex>
Source record: 250501

Hello all,

I've just returned from a brief trip to San Diego. While there, my son (KC5JIE) and I toured the San Diego Wild Animal Park. We always travel with our 2m/70cm HT's in order to allow my son the ability to roam around on his own, yet still rendezvous for meals & going home.

This is particularly handy when going to a 'theme park' like the S D Wild Animal Park. This place is 1800 acres !

When we had just paid for our tickets, the sales clerk said we couldn't bring in our radios. When asked why, he stated that all radios were forbidden from the park, since THEY used radios at the park and didn't want any interference.

Not wanting to argue with someone who didn't know an HT from a CB, I asked if he would let us in as long as we didn't break any Federal laws. He saw no problem with that !

If this truly is the policy of the San Diego Zoo & Wild Animal Park, it seems to fly in the face of good public policy. During the same trip we enjoyed the use of the Disneyland 146.94 repeater ! Obviously D-land has orders of magnitude more radios than the zoo, yet they support a ham repeater !

I have no beef with the wishes of a property owner if they have a legitimate reason for not having any transmissions. Like... we are doing some blasting on that hill over there and don't want to set off the caps...or ... it will interfere with the animal locator, the bird show or whatever.

BUT .... they ought to have this at the front of the park in bold letters BEFORE you've bought your non - refundable tickets. BTW, they don't have the standard legaleze on the back of the ticket....just a blank computer generated piece of paper.

AND ..... if transmitting is so critical, then why does every Tom, Dick and Harry in a green jungle shirt seem to be carrying his/her own HT ?

Anybody from San Diego have any experience with this problem ? Is it an issue at the Balboa Park branch of the Zoo also ?

Last summer I experienced the same problems on our REACT frequency at Six Flags Great America in Gurnee (Chicago)... My girlfriend and I were attempting to manage eight kids of varying ages and interests in a HUGE park... And they would not let us in with radios, after we bought the non-refundable tickets... And so, not being the one to be pushed aside easily, I requested to speak to the director of security and the director of guest relations... Low and behold, after some explaining about what I did, what frequencies we were using, and how they would not interefere with their communications, they let us in, provided that we used our earphones (to not bother other 'guests') I know... You have a federal license to do what you are doing, but hey! This is private property, owned by a gazillion dollar corporation, and all rules are null and void here! Good luck next time, and don't be so easily intimidated!

>Is anyone familiar with the process to become certified as a CNE on
>Netware 3.12??
>
>The Bear

To become a Certified NetWare Engineer, you must take and pass a series of exams. The course material can be taken by attending several classes or by getting book material and studying it. Most CNEs take & pass seven exams, but the number of exams depends upon which elective courses you take, along with the core requirements.

The BEST way to get information about the requirements is to call Novell's FAXBack line. I believe the number is 1-800-NETWARE (but I could be wrong).

The tests are administered by Drake Testing, and cost $85 each - pass or not. Drake has many testing sites throughout the country - call 1-800-REDEXAM.

Once you have your CNA, CNE, ECNE or CNI, you are subject to future test in order to keep your certification.

>Yeah i just wanted to know how i can pick up amateur t.v. on my t.v.?

If there's any activity in your area in the 420-440 MHz band locally, set your TV for cable channel operation (not UHF) and try channels 57, 58, 59, and 60. These are on or close to the picture carrier frequencies most commonly used for ATV, i.e.

421.25 MHz = channel 57
426.25 or 427.25 MHz = channel 58
434.00 MHz = channel 59
439.25 MHz = channel 60

Also I'd suggest using a VCR for this - frequently their receivers are more sensitive than those in the TV set.

>
>Bob
>
>

Additionally - when will we make the move to spectrally efficient repeaters, i.e. < 5 KHz total bandwidth. The technology exists now - look at the 220-222 MHz repeaters available.

I work as a lowly RF tech at the company making that equipment, and we offer 5 kHz interchannel spacing, trunking, digital squelch using a signal inserted into the middle of the channel (without losing that bit of audio spectrum for inteligibility) and radios that learn frequency correction information from the repeaters. They also use a pilot tone both for demodulation (synchronous detector) and to track at high speed the signal level changes present in the mobile environment. DSP is used for most of this work, except the AGC loop. The result is an amplitude compandored SSB radio without flutter or RX frequency error down to 12 dB sinad, and frequent reports of repeaters with less than or equal to the 50 watt PEP ERP limit and non-optimum antenna locations that cover like FM repeaters at 100+ watts of ERP and top-of-the-tower antenna installations.

And - No - these radios don't sound any different from the FM equivalents. With an approximately 3.5 KHz audio bandwidth, they actually sound better than some FM rigs.

So when will Socal and Norcal (RF hotbeds that they are) lead the way into the next generation of repeaters? Assuming that they don't just jump right over this stop and move on to spread spectrum...

From: Bill Langton <blangton@sierra.net>
Message-ID: <3kghkk$lmp@jobes.sierra.net>
Source record: 250506

This post is in response to an E-Mail I received with a question regarding the ability to have two sets of ham plates with the same call. As I was responding by E-Mail, I had one of those quarterly Windows GPF's that trashed the mail. Thus, I dont' know who the message was from....but to answer the question:

You can only have one set of plates for any given vehicle in California. You can apply for a similar vanity plate for a second vehicle: ie - a friend is K6EIK and has call plates on one of his vehicles and has K6EIK 1 as a vanity plate on another of his vehicles. Of course, the vanity plates cost more and include a yearly fee in addition to the fee for the initial plates. I hope this answers your question...whoever you were!!

Take care all....

Go to my home page and follow the ultimate ham radio page (first one)
one that page go to satellite/sarex info. It will show tracking
software. You can also get info from that page about when a certain
satellite will pass over a major city near you.

I use the tracking program call traksat and use keplar elements from
rec.radio.amatuer.space.

Why not try to apply for a second ham (not vanity) plate written,
for example, K6EIK/6? That is certainly a lawful amateur callsign,
and is very appropriate since you're operating `portable' while in
your car. <Uh oh, here come the flames: "Mobile is not portable!">

The CA DMV might need a bit of convincing, though.

Jeff NH6IL (who used to have WA6QIJ plates on a green VW bug)

(I'm not trying to start a wa here. My E-Mail reply to Robert
Schulz bounced, so I'm replying in the newsgroup.)

I would expect DMV to keep a stolen car listing in their computer for as
long as the car remains stolen, and then remove it promptly when (if!) the
car is recovered. Five years sounds to me like typical "lazy bureaucrat's
regulatory overkill syndrome."

In article <3k48m6$61d@parsifal.nando.net> mmalpass@nando.net writes:

>Speaking of 'lids,' anyone know the origin of this label? Acronym maybe??

A very credible origin comes from the landline telegraph days. It was
difficult to differentiate between a dit and a dah on the sounder
(only loud clicks were emitted - one when the arm closed, and another
when the arm opened). So new ops placed a sardine can (i.e., lid) over
the sounder so a ring would be emitted, thus making it easier to
interpret the shorter interval click-pairs from the longer. The OT
ops would refer to these young pups as `lids'.

<No joke!>

Jeff NH6IL (who keeps a sardine can over his rcvr's speaker...)

I have one, and it works quite well. It's also the only HT I've seen that doesn't break up when I pass other nearby repeaters. It's a bit larger and clumsier that the newer models, but I have no real complaints about it. It works well. It's a bit tough to program though, and when used in the car as I do, you'd have to pull over to activate some things as tone-sq, etc. Oh yes, it doesn't have wide band tuning, just the ham band - which is why it's so resistant to intermod - it has a very tight bandpass. You'll also get about 6 to 7 watts when powered by 13.8 volts.

But for the price, you can't beat it. I'd recommend one.

From: jdy18@aol.com
Message-ID: <3ki186$t6v@newsbf02.news.aol.com>
Source record: 250527

I am interested in operating 2-mtr fm in the UK, specifically in London. I understand that UK repeaters must be accessed using a 1750 Hz tone. I have also read that these repeaters may use CTCSS tones in parallel with the 1750 Hz tone. Does anyone know if there are any repeaters in London using the CTCSS tones? If so, freqs and tones would be helpful

thanks es 73 de Jay, KD2L

I've read somewhere that the FCC will open up the KH7 (WH, NH, AH) for
Hawaii as well as KL6 for Alaska, and KP3 for Puerto Rico to provide more
callsigns. Puerto Rico is not far from running out of Advanced calls
either and all they will have left is novice calls also.

From: wday@dfw.net
Message-ID: <wday-1903951405170001@fw5.dfw.net>
Source record: 250378

In part, I wrote this about Fred Maia W5YI's petition to ban 'broadcasts'
from the HF amateur readio spectrum:

> : Fred's a good ol' boy, but, ya know.. sometimes he comes up with the
> : oddest of ideas. This is one of 'em that I hope gets put out to pasture
> : real quick.

to which marcbg@metronet.com (Marc B. Grant) N5NEI assumed something about me:

> Ya' know, whenever Maia does something, I can't help thinking that there's
> a profit motive behind it. Yet here, after reading the rulemaking (have
> you READ it?) I am almost willing to believe he is doing this for the good
> of amateur radio. He makes some very salient points, and I suggest that
> if you haven't read the rulemaking, that you do so before you critisize
> it.
>
> --
> Marc B. Grant
> marcbg@metronet.com
> Amateur Radio N5MEI

Well, Marc, I HAVE read the petition (I captured it the day it was filed
with the feds) and have printed a couple of copies of it to be distributed
at Hardin's (the only ham store in Fort Worth) and to a few folks I know
who might be interested in it. As a matter of fact, I'm sitting right
here looking at a printed copy of the peition. So, I gracefully accept
your "oops".

I agree that Fred has some salient points. I just happen to differ with
his conclusion of what is appropriate as a solution to the situation.

If broadcasts are useful at all, why relegate them to 30MHz and above?

If they're not useful, why allow them at all?

Not everyone lives in an area where VHF/UHF is the lifeblood of local activity.

Not everyone wants to participate on VHF, even if they do live in a
VHF/UHF-active area.

So, for all of those reasons, I repeat that I hope Fred's suggestion to
the FCC is rejected out-of-hand. Either ban one-way transmissions
completely, or leave 'em the heck alone and let the transmitters of those
bulletins find a way to work within the 'user-community' to solve the
problems. Allow hams to remain as 'self-policing' as possible.

3637. For sale: ham stuff

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-19 21:02:00 UTC
From: chris.smart@canrem.com
Message-ID: <60.36479.4727.0N1D6883@canrem.com>
Source record: 250382

Ok; I'm going to try this again, this time giving less extraneous details.
If you want to know anything further about the following gear I have for
sale, contact me at:
Internet: chris.smart@canrem.com (prefered)
Fidonet: netmail to 1:229/15
Rime: private/routed mail to ->crs

1. Homebrew Power supply, 15-20 amps, 12-15 volts DC (can adjust
voltage); very solid construction, runs very cool most of the time,
better then any commertial jobs I've used. $75.00 Canadian or best
offer.

2. Ten-tek Argosy II, very small 50-watt HF rig; 80, 40, 30, 20, 15, and
10 meters ssb and cw. In great shape; comes with Ten-tek power supply,
beat up but great d-104 microphone, voice readout for speaking frequency
on display.
This is the Argosy with the digital display. Great for mobiles, a backup
rig, a simple station up at the cottage, etc. Asking $450.00 Canadian,
I'll lower the above homebrew power supply to $50 Canadian if I can sell
it with the Ten-tek stuff.

3. Sangean ATS-803A general coverage receiver. 150KHZ-30MHZ and 88-108
FM broadcast, (fm stereo with headphones). 10 memories, sideband or AM,
direct frequency entry, runs on wall adapter or d-cells. This is the same
as the Radioshack DX-440. I'd like $190.00 Canadian, or best offer.
Note: I'm selling the power supply because I need the money; I'll
probably regret it some day. I'm selling the Ten-tek stuff because I
*REALLY want an FT-530, and I'm selling the receiver simply because I love
my little Sony receiver and don't need another swl receiver around.

ATTENTION FRANK E. LOUNSBURY (forgive me if I spelled your name
slightly wrong): I responded to your offer to buy the Ten-tek stuff and
15 amp supply via Internet email, and then didn't get anything back.
Please email me again when you read this if you're still interested.

Chris.

I'm posting this on behalf of a friend, who is currently a general class operator. He ahs no problems with the code, and is interested in upgrading. His problem is that he is not technically inclined, and would like to know if any classes exist (live or otherwise) that would teach him the theory that he needs to know for the exams. BTW, this is is New York City, and he is interested in upgrading to Extra. Any help would be appreciated.

WB8WYU (wb8wyu@aol.com) wrote:

[snip]

: ... price wars on actual radio equipment are so nasty that most
: dealers are only making about 5 percent on most rigs. Also, keep in mind
: that a Radio Shack dealer is gouging you for so many other items that they
: can afford to absord the cost of the occassional returned radio.

Your points are well taken. These days, RS is in the consumer electronics business primarily. I'm sure that some of your remember when a RS catalog was mainly electronic components, with some ham, CB and "business-band" radios. Now, RS is making their money on computers and satellite receivers for TV. I can't comment on their quality or prices, but I rarely buy anything from RS because of their insistence on asking for personal info. at the time of sale. That's my number one gripe with the chain.

: ... Also, there seems to be little loyalty in that business, the
: typical ham will call 25 1-800 numbers getting prices on a $3000 radio and
: if someone else is 5 bucks cheaper, they get the business regardless of
: what other nice things you've done for them. So I say pick yourself a
: dealer that you like and show them a little loyalty and they will take
: care of you.

Here's an excellent case that shows why we no longer have as many, if any, local ham/electronic supply stores. Granted, even in the late '60s, the one that I used to patronize made their big money off the broadcast and TV stations in the area, but this also meant one-stop shopping when we needed a tube or capacitor. They sold ham gear as well.

When I bought my computer a few years ago, one reason that I chose an out-of-state mailorder company, was to dodge the 7.75% sales tax that a local firm would charge. While this won't work when buying gear from HRO, it may if I order from AES or OKC.

The big mailorder firms are good, but this is killing the local merchants. In this area, there are no ham stores; we have to drive to LA or Orange County, which is no fun in the heavy traffic. There's no substitute for going into a store and actually turning the dials any trying the equipment out.

I was in Sacramento a few weeks ago, and stopped in at The Radio Place, a local ham/communications supply store. Then and there, I decided that I would support such a store, if there were one in my area, even with the sales tax and higher prices.

-> W4TZB

1. Yes it has 2 meters there are 3 or 4 repeaters that cover the island very nicely.

2. You have to notify them in advance and get a permit to operate in the country. If you are going to be there for a while, for a nominal fee, they will assign you a Bermuda call sign on a 6 month basis.

This was true as of the last time I was there a couple years ago.

If you are an ARRL member you can speak to them and they will point you in the correct direction when traveling outside the U.S.

Newsgroups: rec.radio.amateur.antenna
Distribution: usa
Subject: HELP THIS HAM PLEASE!!! Read!

A fellow ham needs your help!

Lyle Flemming KB7RBV served in the army during WWII. His tour of the South Pacific included Island hopping. He was there when McArthur "returned" to the phillipnes. He saw combat, and was wounded 3 times!
Upon his discharge, he was told that his medals would be mailed to him. These include 3 Purple hearts, bronze star, a several others. That was FIFTY years ago! And to this day he has not gotten them. He has written several letters, even to the president, no response!

LETS GET THIS MAN HIS MEDALS! Afterall, he fought , and gave his best for this country, and all of us!

All you have to do is take a couple of moments, and write a note addressed to "Commander and Chief". Email these letters to me, and I will mail them on to the correct people. Or, just send it direct to the "Secretary of the Army" Please let ME know when you do this.

Its a shame that he has been waiting SO LONG for these. One would think that this kind of thing would not happen. But it does.

Get this man the respect he earned with his dedication, honor, and blood!

THANKS!!! to ALL of you who choose to help!!

mail to:

I'm going to a section meeting in the Boston, Mass, USA area soon, having just been appointed Internetworking ASM for Eastern Massachusetts.

I'd like to present what digital modes and networking people have put together around the USA and world.

Please educate me. I'd like to see if we New Englanders can't get our act together and set up something solid which can hopefully expand further.

Thanks for any leads anyone can offer.

What's going on in California? Arizona? Texas? Australia?

73,

: I would expect DMV to keep a stolen car listing in their computer for as
: long as the car remains stolen, and then remove it promptly when (if!) the
: car is recovered. Five years sounds to me like typical "lazy bureaucrat's
: regulatory overkill syndrome."

Actually ...... the original story is even worse. When my car was
stolen it was put into the "computer" by the Police/DMV. The car was
stolen in Santa Clara (nr San Jose) ...... a few months later, I was
notified by the Long Beach Police that my car had been "recovered" and
then "released to the owner"....!!!!!!!!!!!!!!!!!! Turns out that
there was a second Honda Prelude with IDENTICAL VIH - vehicle I.D. numbers
listed in the DMV computer system. I still can't believe it ..... but
they sent a detective out and apparently somewhere along the line there
were two cars .... same make/model/year registered with the same VIH
..... don't know if one or the other was entered incorrectly .... but
still.............

Ain't that sumthin'?!

Hi:

The GeoClock BBS is at 1-703-241-7980, from which you can download the latest shareware version. Registration permits subsequent purchase (not available in shareware) add-on for Hams. This add-on, which you may not have seen comes with a custom azmuthal map centered on your QTH! When this map is displayed (versus all the other maps that are available), the
program permits entry of callsign prefixes, then displays bearings and distances for short path and long path to that prefix, as well as the name of the country and some other stuff. The short and long paths are plotted on the round azmuthal map as a straight line that is the diameter
of the map running through your location at the center and an "x" that marks the location of the DX station. Once a DX station gives you the exact QTH, you can zoom to that location, calculate the precise distance and/or bearing, etc. It's way cool. I hesitate to
quote the prices of registration, they may have changed.

One neat thing about registering is that he gives you a program on the distribution floppy that he mails, called REGISTER.EXE. This little executable activates any subsequently downloaded shareware versions you get to make them fully functional! In essence, once you have this key program, you are registered for all future releases!

If the BBS does not appeal, try the author's address:

Joseph R. Ahlgren
2218 N. Tuckahoe St.
Arlington, VA 22205

Enjoy it, AB6SL

: make one headset work either PTT or VOX, radio mounting tips, and
: suggestions for antennas to work without a ground plane. (I'd
: prefer NOT to home-brew the antenna, so suggestions for commercial
: antennas are preferred.) I do want 2m/70cm ability as well.

: 73 and thanks in advance.

I used to do this on my GS-1000E. I mounted a thin 8 ohm speaker inside the lining on my Bell Star helmet, and a microphone element inside the chin bar. I then led the wires to a microphone cord and terminated them with a 1/4 inch phone plug. This was plugged into a 1/4 phone jack mounted on the Hannigan fairing just ahead of my right leg so that it was easy to disconnect when dismounting - or to yank out in an emergency.

I have experimented with VOX switching, but found that wind noise, especially at higher speeds, and traffic noise levels in general were high enough to make setting the VOX awkward. I eventually went to PTT, and mounted a switch on the left bar so that I could hit it with my thumb without moving my hand very much.

I also operated both mobiles run off the bike's electrical system and handhelds on their own batteries. Suppressing electrical noise on the bike was difficult when using a mobile because my bike was old enough (1979) to have virtually no noise suppression built in, and having to run the antenna cable a few inches from the coils probably didn't help.

I had better luck with a handheld, as I didn't have to deal with the electrical noise generated on the bike's electrical system, just the noise from the plug wires.

This also simplified the antenna system, since for the mobile radio, I had mounted a 5/8 Larsen on the aluminum luggage rack mounted on the rear of the machine. This worked fairly well, with sufficient ground plane to function, but made it awkward for a passenger to swing her leg past the antenna.

Eventually, I settled on using a handheld inside a tank bag as my preferred method. I used a short cable to a bnc connector mounted on a small piece of aluminum plate so that the rubber duck could sit on the outside of the tank bag with my radio warm and dry inside it. I left the PTT switch on the handlebar, but plugged the cable from the switch into an inline two pole connector in the tank bag.

All of this had the obvious disadvantage that you had to stop the bike to change frequencies, but that's probably better anyway.

E-mail if you have specific questions.

The Dayton awards are announced. Find out the winners on
Newsline report number 918 coming your way, right now!

(*****
DAYTON AMATEUR RADIO ASSOC AWARDS

It's Emmy and Oscar time again in ham radio. The Dayton
Amateur Radio Association has announced the names of this years
Hamvention awards winners. May we have the envelope please:

In the category of 1995 Radio Amateur of the Year, the winner
is a young woman from Indiana. A woman who has spent much of her
adult life in Connecticut helping to introduce youngsters to the
magic of ham radio. Her name is Rosalie White; her call sign is
WA1STO; and she heads up the Educational Activities Department at
ARRL Headquarters in Newington.

"I think the award will make me work just that much harder to
meet the goals that the department has for educational purposes in
Amateur Radio. Rosalie White, WA1STO.

By all standards Rosalie White, WA1STO is a fine representative
of the very best that America's heartland has produced. Born and
raised in the farming community of Westport, Indiana Rosalie is
the youngest of three daughters of Roland and Betty White. No,
not Betty White the actress. Rosalie's mother Betty had an
eminent career as a school teacher and educator. Her dad Roland
was a graduate of Purdue University and followed a lifelong career
in agriculture.

Rosalie graduated from Westport High School in 1967 and attended Hanover College for the next three years. She then transferred to Indiana University where she received her Bachelors Degree in Elementary Education in 1971. She taught third-grade for two years in Indianapolis before moving permanently to Connecticut in July 1973. There she received a Masters Degree in Special Education from Central Connecticut State University in 1977.

It was while still in college that Rosalie's' interest in Amateur Radio was born. She earned her Novice license in 1970 and was issued the call sign WN9FJT. Within a year she had garnered her General class ticket, and by 1976 held the Advanced. That's also when the FCC gave her the WA1STO call by which she is known to this day.

Her career of service to Amateur Radio began in the fall of 1973. That's when she took her first ham radio related job at the American Radio Relay League. She served in Newington in various positions until 1979 when she left to explore other career opportunities. Rosalie returned to headquarters in 1987. It was then that her very special abilities as a born communicator brought her star to the eyes of all radio amateurs.

When the ARRL need someone to head up its Educational Activities Department they tapped Rosalie to become the Manager. In that position, she has coordinated the many educational ventures that have brought the word of Amateur Radio into classrooms and directly to students the world over.

To enumerate all of Rosalies' accomplishments would take up an entire newscast but here are a couple of examples. She has hosted a myriad of special workshops around the country for Radio Amateur recruiters and instructors. She has become the leader in teaching the teachers who educate our nations young about the marvelous educational tool of a live Amateur Radio station in a classroom. She has taught these instructors how to motivate their students by using Amateur Radio as a tool to better understand all of mankind and the world that they are growing up to assume the roles of leaders in. Rosalie says that it is a great honor to be named Radio Amateur of the Year and gives much of the credit for her winning to those who work with her:

"It certainly is a surprise to be telephoned and told something like that. It kind of makes a lot of the work worth while and I have to say that it wouldn't have happened if it weren't for the great staff that I have." WA1STO

Rosalies' career really came into sharp focus when her sphere of influence expanded from terrestrial earth into space. She became the ARRL representative of the SAREX Working Group. The Shuttle Amateur Radio Experiment puts amateur radio into space shuttles. In that capacity, she has played a major role in creating great excitement among students. Her enthusiasm and skill have also made it exciting times for amateur radio and for

the space program.
I can speak personally to that as Chairman of the SAREX Working Group. When she learned of her choice as Dayton's Radio Amateur of the Year, the reaction was pure Rosalie:

"The first thing that popped into my head was all the work we have done with SAREX and allowing thousands of kids to get a taste of the excitement of science and technology. I assume that was probably a major part of why the award was given." WA1STO

Rosalie is in charge of SAREX educational programs. She works very closely with Frank Bauer, KA3HDO, AMSAT's Vice President for Manned Space Flight. They screen applications, choose and work with schools to insure properly coordinated contacts, and they work with the astronauts to maintain a high rate of effective communication. Along with Lou McFadin, W5DID, the principal investigator, they have formed an unbeatable team."
Rosalie Whites ongoing day to day dedication to the young people has helped make the words "Amateur Radio" very respected among members of the nations and worlds educational communities, and also has made ham radio stations a welcome addition to many classrooms the world over. That's why she is Dayton's 1995 Radio Amateur of the Year.
Named by DARA to receive its 1995 Specific Achievement Award is Ed Briner, WA3TVG. Ed is with MARCO the Medical Amateur Radio Council and, among other responsibilities he serves as the groups newsletter editor.
Selected as recipient of this years Technical Achievement award is Philip Farrell, K7PF. If the name Philip Farrell sounds familiar it's because he is the ham who developed the so-called transmitter finger printing technology that has been used successfully in ridding the airwaves of harmful sources of interference.
We will have a complete profile on WA3TVG and K7PF on next weeks newscast. Meantime, our congratulations to all three of this years Dayton award winners from the staff here at Newsline.

The winners will receive their awards the evening of April 29th at the Hamventions' grand banquet. Newsline will be there to report on Hamvention '95 and the banquet activities.

HAM COMPUTER HACKER INDICTED

Computer super hacker Kevin David Mitnick, N6NHG has been indicted on 23 counts of computer access fraud. On Thursday, March 9th, federal authorities in Raleigh, North Carolina charged the California ham with one count of illegally possessing device making equipment, one count of possessing unauthorized access devices and 21 counts of using a counterfeit access device. Authorities say that by using his knowledge of computers and cellular telephone switching, Mitnick may have stolen as many as

20,000 credit card numbers from one computer network alone. He is also believed to have also accessed numerous other secret, on-line systems.
The March 9th indictment covers only Mitnick's alleged activities during his 10 day stay in Raleigh. Whether N6NHG will be tried in Raleigh still has not been announced. In addition to the North Carolina criminal allegations, Mitnick also faces a state warrant in California for parole violation and possible other charges Colorado and several other states.
As previously reported, Mitnick was captured with the help of a San Diego computer security expert. The ham turned hacker faces a maximum of 20 years in prison if he is convicted on each of the 23 charges in this first federal indictment.

(*****
WILSON UPDATE

ARRL President George S. Wilson, W4OYI, remains in serious condition in a suburban Virginia hospital where he was taken following a stroke he suffered on February 11th. Newsline has been following the recovery progress being made by President Wilson.
President Wilson is still in serious condition, but he is showing some improvement. We spoke we ARRL Executive Vice President David Sumner, K1ZZ who files us in.

"George has improved, particularly over the last week after a period where everyone was quite concerned about the way things were going. Over the last several days he has been awake and has been talking. He still clearly has a long road ahead of him for rehabilitation. But the family and his friends who have been in to see him are tremendously encouraged. We're anticipating something in the next two weeks he is likely to be transferred to a facility closer to his home in western Kentucky." David Sumner, K1ZZ

Get well wishes for George Wilson W4OYI should be sent in care of ARRL Headquarters, 225 Main Street, Newington Connecticut, 06111.

(*****
2400 MHZ VICTORY

Some good news for hams who have following the possibility of our service loosing part of an important UHF band. On Wednesday March 15th, the National Telecommunications and Information Agency the NTIA released its final recommendations on spectrum reallocation and the agency said that the majority of ham radio operations should remain unchanged. Again, ARRL Executive Vice President Dave Sumner, K1ZZ.

"In that report they are identifying 2400 to 2402 and 2417 to 2450 Mhz as bands that ought to be identified in order to maintain stability for amateur and part 15 use in that entire frequency range of 2400 to 2450. Those amateurs who are following this proceeding know that we were facing the possible loss of access to spectrum in this range.
Now as a result of this preceding it appears the NTIA is recommending to the FCC not only that amateurs not loss that access, but the entire 50 Mhz range be treated as one contiguous band and that our continued access to that band should be provided for the long term." David Sumner, K1ZZ

Dave adds that ham radio is still not out of the woods on this one. There is still a continuing threat to the band from 2300 to 2310 MHz. This says Sumner, will not be resolved until there is some further FCC rule making on the issues at hand.

(*****
A0-10 BACK

AMSAT-OSCAR 10 is back on the air. At least it is for the moment according to AMSAT North America president Bill Tynan, W3XO who says that AO-10 was heard at his QTH for the first time in several months. Bill says that he was tuning around looking for the Shuttle and happened to stray to 145.810 and heard a full quieting carrier with considerable QSB. Switching to sideband, Bill noted that it was a continuous carrier with no modulation that reminded him of AO-10. Tuning up the band, Bill heard a sideband QSO with quite strong signals. Checking Instantrack, he found that AO-10 was indeed in view. It was over the southern Pacific in the late stage of the orbit, but still in daylight. So Bill set up for the AO-10 uplink band where he received strong return signals. AT 05:15 UTC, he had a nice QSO with VE7AHX and another at 05:22 with KC6EIJ.

(*****
AMSAT EDITOR

John Hansen, WA0PTV says that he is retiring as the volunteer editor of AMSAT Journal. Hansen says that work pressures are forcing him to step down but indicates a willingness to continue the write the "Heard on the Downlink" column.
Because of Hansen's imminent departure, AMSAT is looking for someone with experience in the publication field to take on the job of rounding up articles, screening and editing them, while meeting a set deadline.
Anyone desiring to volunteer to fill this vital role in our organization, please contact Bill Tynan via the Internet to w3xo@amsat.org.

YOUNG HAM OF THE YEAR AWARD

A reminder that nominating period for 1995 "Young Ham of the Year Award" is now open. This award program, now entering its ninth consecutive year, is presented annually to a United States licensed Radio Amateur who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio service.
Any continental United States FCC licensed ham radio operator aged 18 and younger who have used Amateur Radio to significantly contribute to the benefit of the service, to the state of the communications art, to their community or the nation are eligible to be nominated. Thanks to corporate support from Yaesu USA, the 1995 Young Ham of the Year will receive an expense paid trip to the Huntsville Hamfest where he or she will be presented the award. The winner will also receive a V.I.P. tour of the Marshall Spaceflight Center and Spacecamp courtesy of CQ Magazine.
All nominations must be submitted before June 30th, 1995 on an official application available for a self addressed stamped envelope to the 1995 Young Ham of the Year Award, c/o Newsline, 28197 Robin Avenue, Saugus, California 91350. These nominating applications are also available electronically. You can download them from the ham radio files section on either GEnie or America Online.

(*****
DX

In DX, W4FOA reports overhearing a conversation with A22MN, and another station that Dave would be on 160 meters from Botswana. He typically transmits on 1827 KHz and listens up 5 KHz.
Also, word that XU7VK in Phnom Penh has renewed his licence which is valid until February 1996. He has also received a special callsign XU95HA. He can use on events such contests, and any special Cambodian or Hungarian celebrations. QSL via HA0HW for both calls.

(*****
FLOATING ICE ISLAND

The Associated Press reports that a giant chunk of ice has broken off of Antarctica and is heading north into the Pacific. British scientists say it's 48 miles long, 23 miles wide and more than 650 feet thick.
The researchers say that pieces of the frozen continent are breaking off because of rising temperatures in the region. But don't expect to see the giant iceberg floating up to the North American coast. It is expected thaw quickly once it reaches warmer water.
It will be interesting to see if anyone mounts a DXpedition to the floating island to put it on the air before this rare one, literally, melts away.

Could someone point me to a copy of the California 900 meg bandplan? It is different than the ARRL plan shown in the repeater directory.

Thanks,

Chris KD6DSI

3664. Looking for Local Emergency Comms Groups

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-20 06:13:09 UTC
From: Edward Addy <nacec@millcomm.com>
Message-ID: <3kj6dl$924@news.millcomm.com>
Source record: 250422

Hello All:

We have just opened up a new WWW Homepage. This homepage system contains forms for collecting information on Local Emergency Communications Organizations like ARES & RACES.

We at The North American Center For Emergency Communications are building a database of all such organizations.

There is no charge for registering your organization into the database, and it could help to get those relief organizations that may be working in your area following a disaster in touch with your organization quicker to request your help with communications.

The WWW address to our homepage area is:

http://www.winternet.com/~nacec/index.com

All the best to you and yours!

3667. Re: RE-NO CODE TECHS GETTING TH

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-20 06:26:07 UTC
From: hubbert@minerva.cis.yale.edu
Message-ID: <3kj75v$ams@news.ycc.yale.edu>
Source record: 250410

I've been reading these humerous anti-no code posts for quite a while and I'll add my .02 . I started using 2m HT's while mountaineering with my friends for communication and for the event we needed a rescue. We always talked in simplex, in fact I've never used a repeater (but I've listened to a few of them). I got my ameteur license for the fact that it was easy to attain. If I had to learn code I'm sure I would not have gotten it. Remember: you need not have a license in order to purchase a radio, which I find interesting. Ham radio does not really appeal to me as a "hobby". I personally think that of the so called communicating that goes on, 99% of it is people who like to hear themselves talk, very little substance. I do think you do great work in emergencies. I also think that there would be *alot* more operating without licenses going on if the testing was dependent on learning code, which I don't see myself ever using.

I didn't really mean to bash Ham radio or it's users, I'm sure you're all nice folks.

73's (whatever that means ;-))

3670. CW Tempo vs. Speed

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-20 07:51:20 UTC
From: Steve Darden <100352.445@CompuServe.COM>
Message-ID: <3kjc5o$7en$1@mhadg.production.compuserve.com>
Source record: 250415

The Swedish MorseTrainer software we're using appears quite
well-designed. To discourage beginners from dot-dash counting
MorseTrainer lessons begin at tempo 30 (total char/min), character
speed 80 (of each character). My question: to simulate "real
world" morse sent at 13wpm, what should the tempo and speed settings
be? When both are set to 65 (13wpm x 5cpw = 65cpm), I have great
difficulty identifying the space between characters. I can copy
with the character speed set to 70, temp to 65. But I'm not sure
this is correct.

Thanks (direct email is easier for us),
Steve
I'm not sure this is correct.

Also, we are seeking text files which simulate the General Class
morse test - a "typical QSO". Since we haven't yet received our new
HF radio, we can't eavesdrop to hear live morse. Anyone emailing us
some samples for practice would be a real hero.

Thanks (direct email is easier for us),

Steve
Also, we are seeking text files which simulate the General Class

From: garyk9gs@solaria.mil.wi.us
Message-ID: <3kjci7$gck@hummin.sol.net>
Source record: 250420

Chris Railton (chris@bris.ac.uk) wrote:

: I must say that more often than not if I tune around 14MHz at a weekend there
: is nothing else but people shouting "contest", usually with no regard for
: other operators such as SSTV on 14230. It makes the band unusable for anything
: else too often. Why not have a contest free zone on each band where other
: interests can be indulged?

Well Chris, I was waiting for somebody to bring up the SSTV issue. As an avid contester that operates several contests each year on 20M, i have never met a more inconsiderate bunch of hams than the SSTV types on 20M. These IDIOTS (and yes I mean IDIOTS!) think they have to have the frequencies 5 Khz +/- of 14230 to themselves. I have frequently been on 14227 or so FOR SEVERAL HOURS when one of these guys opens up right on frequency. They don't even have the courtesy to ask you to move first. To me this is DELIBERATE interference. The other thing that frequently happens is that 14230 +/- may be clear. I always ask if the frequency is in use. Usually I never get a reply. After working a few stations, there it is, SSTV right on my frequency. And since I cannot decode their SSTV, I have no way of knowing who they are. Now I know they cannot possibly conduct a SSTV contact on the frequency we are on (and they know this too), why do the fire up right on top of me??

Lastly, I KNOW they can hear me very well. I usually operate 20M with 5/5/5 yagis with the top antennas over 150'. If these SSTV guys are 30dB over S9 by me, I must be AT THE VERY LEAST as strong.

Why can't the SSTV guys operate on one of the WARC bands where there is much less interference, even on non-contest weekends?? It seems to me that 14230 would always be a pretty poor choice of frequency at any time, given the SSTV mode's need for minimal interference.

I don't mean to climb all over you personally Chris. I just felt I needed to let the others in the group know what really goes on.

73,
Gary

From: bob@raddev.com (Bob Levine)
Subject: 1x2 & 2x1 Calls

I posted an article last week offering listings of the
available 1x2 and 2x1 calls in any district.

Please:

If you send a floppy for all the listings, please format
it and VIRUS check it. I already got one with FORM VIRUS
and one with MONKEY VIRUS. Good thing I run Norton Anti
Virus. 3.5" or 5.25" 1.44M,720K, or 1.2m in the case of 5.25".

Dont send me any money. I've returned all the dollar bills
and IRCs. You'll get a Radio Devices catalog and that is
my "payment". Maybe you'll see something on it you like....

Send business size SASE and if you send a floppy, please
send a SASFM (self addressed stamped floppy mailer). Floppy
disks werent meant to travel in an envelope with .32c postage.

BTW, I didnt weed out the calls that arent in the continental
US like WP1* or KL1* etc.... I havent seen anything that says
you cant pick one of those. They arent in the US according to
DXCC, but according to the ITU I think they are?

Subject: Advice to TS 940 owners

Just finished my Fan project here on my 940. IF your fan is getting loud and is old, I might recommend a replacement motor (pretty easy installation) or at least a good single drop of teflon lubricant to the shaft. If it is old, I recommend replacement ($27 from Pacific Coast Parts) since mine just "stopped" without warning and since there is a thermal switch, I didn't know whether it was off because the power supply was not yet hot or if the fan was broken. Well, the motor just wasn't spinning up. Result: two shot pass transistors on the power supply and some down time and concern about my radio. The transistors are not expensive (well, if you have Kenwood do it they are more than double the going price, but $12 apiece for two of them is not a killer), but the heat generated can do other damage.

The other thing I have done to prevent future problems is to put a resistor in the thermister line to keep the fan running on low speed at all times. That way the power supply stays within a narrower temperature range for more of the time, AND I will KNOW if the fan circuit has a problem, since I won't hear the fan at all. This little mod was courtesy Tom, K2CZ, and involves a 2.2 K 1/2 watt resistor across the leads of plug 13 on the AVR board. (ONLY do this if you have some solid electronic knowledge and basic understanding of the radio, PLEASE! Don't hurt your radio or yourself!)

From: tigger@prairienet.org (Sean E. Kutzko)
Subject: Contesting - why?

In a previous article, dmunroe@vcd.hp.com (Jordan Peugeot) says:

>Could someone explain what the appeal is in contesting? I realize that
>people have differing ideas of what is fun, but, if contesting is what
>I think it is, spending an entire weekend making thousands of extremely
>brief contacts not only sounds boring, but also seems to be an incredible
>abuse of the spectrum. Wouldn't it be more enjoyable to use the time to
>have real QSO's and possibly make new friends in the process?

As the previous respondent pointed out, if you don't understand, no explanation is possible. However, I will try.

My personal enjoyment comes from the competitive nature of the event. I find this quite amusing personally, since I am not a competitive person by nature EXCEPT in a contest. I have never been one for ragchewing. My personal enjoyment in the hobby does not come from talking to somebody about their wife and kids, or what kind of garden they've planted this year (Unless they're from the African continent!). I am a DX'er and Contester. Yes, this means I send and receive a lot of "599 QRZ?" exchanges. For some, that can be comapred to a video game, or at the least, quite boring.

My primary enjoyment comes from the fact that I have established two-way contact with somebody on the other side of the earth. It doesn't matter what the duration of the contact is...to me, the mere fact that I am able to do it serves as enjoyment enough.

I am constantly trimming or pruning my station to make it as efficient as possible. I'm hardly a Big Gun operator, but I like to see what I can do with the equipment I have. To me, contesting is the best way to put my station through the ringer, find out what it's strengths and weaknesses are (and my personal ones, too), and examine room for improvement. In addition, contesting offers me chances to take care of the awards that I'm currently pursuing (DXCC, VUCC, WAZ, 5B WAS) with an alarming degree of efficiency Example: I decided I wanted a good, short-term challenge, so I decided to go for WAS on 160m. I only have a 40m dipole for a 160m antenna, so this seemed like a decent personal and station challenge. I was able to accomplish this feat in less than 3 months, primarily due to the ARRL 160m and International DX contests. There are some folks that have been trying to do this for several years. Does that make me a better op? I don't think so. Perhaps a wiser investor of time, but not "better."

Regarding meeting new people, I've made more long-term friendships (8+years) through contesting than by ragchewing. I've even been invited to operate from some places around the world where the "local" has opened his home and station to me for next to nothing (in one case, NOTHING),

allowing me to see different parts of the world that I couldn't afford to see otherwise.

As for the presumed "waste" of spectrum, let's make the analogy to auto racing. Lots of people enjoy getting in their cars and driving in a circle at 200mph for hours on end. I don't get it. You could even argue that in this day and age of "reduce, reuse, recylce" and "save our natural resources," auto racing is a trememdous waste of petroleum products. Obviously, there are lots of folks who don't see it that way. besides, if you don't enjoy the QRM caused by contesting, you can always switch modes of communication. If it's an SSB contest, ragchew on CW. (You DO know CW, right?) Also, remember that contests are limited to 48 hour periods. You can ragchew ANY day of the year.

I personally feel that slow-scan TV is one of the most obnoxious forms of communication by ham radio there is. But then again, who the hell am I to judge? Do what you enjoy the most.

These are my two cents. I speak for nobody but myself.

73,

Sean

I think it is more the case that there are a few people out there who feel that way and also insist on letting the rest of us know about it! I like to believe that the majority are more even-minded than that. One factor that it's good to keep in mind is that since this topic of discussion is a never-ending one, after a while the only folks left talking are those with an ax to grind---the rest of the group has decided that there's no future in trying to change the minds of the disgruntled.

Subject: Lead Acid Battery Charge

Dale Chidester (chideste@pt.Cyanamid.COM) wrote:
: Some time ago, a formula was published for the density of the sulfuric acid in
: a lead-acid battery and the state of it's charge (% charge). Naturally I filed
: it away for future reference. Now that I need it, however, I can't find it!
: Could someone, with a better filing system than I have, please send me the
: relationship again?
: Thanks,
: Dale

Hope I can help you Dale. Here's what I know: A fully charged lead-acid
wet cell should have a sulfuric acid concentration of about 30% by
weight. A fully discharged battery will be near zero. A 30%
sulfuric acid solution has a density of 1.2185 g/mL. Assuming a linear
relationship of charge v. concentration, a suitable formula would be:

density = 0.002185 * %charge + 1.000

or rearanged for %charge:

%charge = (density - 1.000)/0.002185

Hope this helps.

>
There is still a "Radio" merit badge in addition to the "Communications"
badge. (I don't guarantee the accuracy of all this as my son just joined Boy
Scouts a week ago and I've only looked briefly at the requirement book
once). The Radio badge has 3 tracks... one for broadcasting, one for SWL
and one for ham radio, with a set of requirements for each - the boy
chooses which one he wants to do. The ham radio track requires learning CW
and making some HF contacts as well as collecting a few QSL cards. The
Communications badge, on the other hand, which I think may be an Eagle
required badge, deals with such things as public speaking, letter writing,
resume writing etc and has nothing to do with radio at all.

Perhaps it's obvious, but the first person to contact would be the
station, if it can be identified, that is suspected of causing the
interference.

I would also get your local club RFI committee involved. Also the
ARRL Technical Assistant for the area. (Your Section Manager,
listed on page 8 of QST, would know who that is.)

This question needs to be answered first. There are wo versions of WFG 3.11: an upgrade version, to be applied over Windows 3.1, and a complete version. The original poster did not indicate which one he had, but, if it was the latter, I see no problem with him giving away his old copy of Windows 3.1.

This is not significantly different than intentionally buying an old version (I receive a catalog from an outfit known as "Surplus Software". lots of old software really cheap) and promptly buying the new version at the upgrade price.

In article <9503151600373396@mogur.com>, bob.cunningham@mogur.com (Bob Cunningham) writes:

> The [alt.usage.english] FAQ gives the impression that the
> International Distress Signal consists of the letters SOS. This is
> not true. The letters SOS in Morse Code would be the sequence
> "... --- ...". The distress signal is "...---...". It is a
> single Morse-code character. In radio school we were emphatically
> told to avoid thinking of it as SOS, the danger being that we would
> be led to transmit it that way.
>
> It *is* correct to refer to it as SOS with a solid bar drawn across
> the top. This means that it has the same dot-dash pattern as SOS,
> but with no spaces.

The alt.usage.english FAQ entry that Bob is objecting to reads as
follows:

```
# "SOS"
# -----
#
# SOS does NOT stand for "Save Our Ship/Souls", for "Stop Other
# Signals", for "Send Our Saviour/Succour", or for the Russian
# _Spasiti Ot Smerti_ ("save from death"). The letters, recommended
# at the international Radio Telegraph Conference of 1906 and
# officially adopted in 1908, were chosen because they were easy to
# remember, transmit, and understand in Morse code (...---...).
# They have no other significance.
```

Let me confess that I did once have the spaces there, but I fixed
that as a result of e-mail I got from a British radio ham in September
(before Bob joined the Net). Looking at that e-mail again, I have
now decided that it is worth explicitly mentioning that SOS is
transmitted as a single symbol.

Bob's original subject line was "Error in FAQ". The alleged error,
I take it, is my use of the word "letters". That SOS is transmitted
as a single symbol now does not disprove that letters were adopted in
1908. I have two reference books (Collins English Dictionary and
the Henry Holt Encyclopedia of Word and Phrase Origins) that say that
the *letters* were adopted. In the absence of additional historical
information (I am cross-posting to a couple of radio newsgroups in
the hope of receiving such), I see no evidence of an error.

> ...

My bother (Mike, N3UMY) and sister-in-law (Michelle, N3SYE) recently purchased a through-the-glass 2-meter antenna, and installed it on their Honda Civic. (They were tired of scratching the paint with the mag-mount antenna, and wanted a permanently installed antenna that did not require a hole (*shudder*) to be punched into the car body.)

Currently they're having some problems tuning the antenna. The installation is correct, but they're unable to resonate the antenna through the coupling box located in the car interior. I suggested they call the manufacturer (Antenna Specialists), and they did. The technical rep said that they had no record of anyone having difficulty installing the antenna on the make and model of car that they own, and thinks that the coupling box is inoperative. So in an act of good faith, he's sending them a new coupling box, and whip in the mail. Hopefully my brother will receive all of this in the mail this week.

Lessons learned: (1) It appears that some of the well-known manufacturers are willing to work with customers who have purchased a through-the-glass antenna, (2) before you even purchase the antenna, call the manufacturer and see if their through-the-glass antenna will work on your car. (Some types of tinted glass cannot be used with through-the-glass antennas.)

Just some info...

This past weekend my brother (Mike, N3UMY) and I were playing around with his 2-meter car antenna, and we were having difficulty getting the SWR meter to give us consistent readings. In particular, his little mag-mount showed a very high SWR (5:1), which was quite a surprise since it never had to be tuned before. So what was going on? Well, we looked around the area where the car was parked a guess what we saw? A metal chain link fence, telephone poles with power lines, phone lines, and guy wires on them, a large metal gutter on the house, etc. There was metal all over the place, some of it just a few feet from the car. So we moved the car to an empty school parking lot. The meter then showed the 1:1 matched we had expected.

I was surprised to see just how much all that metal affected the performance of the antenna. I had once read that one should not try to tune an antenna that is closer than two wavelengths to a large metal object. My experience that passed weekend seems to agree with this statement. Comments anyone?

I'm with you 100%. You don't need a Porche to drive in the fast lane, and
you don't have to bat .400 to use the town's baseball field. To use
the spectrum, all you have to do is keep from interfering with the other
stations. That's the intent of the law. I never heard so many elitist
science fair geeks in all my life.

A friend of mine are using a CB arial (27MHz) on his amateur radio. He gets a lot of SWR on this antenna on 40 and 80 Meter (obvious).

The thing is that he is quite happy with it, because he manages to tune the SWR down with his antenna tuner.

Do you get more power out from the arial using an ordinary antenna tuner, or is it the tuner that burns up the reflected power?

GB>I don't think 'caveat emptor' is necessarily appropriate here. After
GB>all, you made your purchase, and made the deal. Through no fault of
GB>the dealer, you decided that the equipment was surplus to your needs.
GB>It wasn't defective. It wasn't wrong. You just didn't like it. Very
GB>likely, all the information you needed to make that decision was
GB>available, pre-purchase, in the literature and perhaps on the demo-table.

Maybe not entirely.

GB>This, after using the equipment for an unspecified period.

You seem to assume it is a LONG period.

GB>You then returned to the dealer, offering him for sale a slightly
GB>used rig, for which he offered a price slightly lower than that
GB>for which he'd be able to sell it (he could mark the same price you'd
GB>paid, but then he wouldn't be fair to the fellow who got it next).

Total exaggeration Greg!

GB>There's no reason that he should give up any of the proceeds of the
GB>sale, plus incur the overhead costs of having both done and un-done
GB>the deal. It's only fair that the cost of your changing your mind
GB>should be yours and yours alone.

It's just not that cut and dried. Ask him some more questions about this
hypothetical circumstance.

GB>The point is.... ....buyer's remorse, if the buyer hasn't been misled or
GB>over-sold, is really the buyer's problem.

Most retailers don't agree with you. (Unless you live in England of
course!) Typically, a buyer will purchase a new item for their home.
They get it home, and find that the color does not match the scheme in
the home when the lighting etc. is in place. Or the kids didn't like
it. Or the husband preferred the larger model etc. They return it
swiftly in perfect condition, and a full refund is given with no
questions asked anywhere in the U.S.

GB>Somehow we've come to expect
GB>ham equipment dealers to go to more extraordinary measures than other
GB>merchants,

nonsense. We expect them to be more difficult to deal with because of
the more competitive nature of their business.

GB>possibly because of the fraternal nature of the hobby. In
GB>doing so, though, are we really being fair to the 'brethren' among us
GB>who make it their life's work to keep us in toys? Yes, some make a
GB>good living at it, but most of them could probably do better selling
GB>consumer electronics.

Again this is JUST not true. I might have agreed if you had mentioned
ANY OTHER business than consumer electronics Greg!

THAT is a very tough HIGHLY competitive business with a smaller profit
margin than ham gear in most areas.

Noticed how consumer electronics prices continue to go DOWN all the
time, and ham prices go UP all of the time? I guess not!
Think about it... 73 de AF4K

Zack wrote:

> "may determine the sensitivity of the system"

Actually, determines the system temperature (noise figure). And, even today's "state of the art" (as their called) VHF and/or UHF transceivers are pretty deaf (high noise figure), and require the use of a well designed low noise preamp ahead of them for any serious weak signal work. The closer the preamp is placed to the antenna feed point, the better, as the losses are cumulative.

I will take the time to make a formal apology to the No-Code Tech's out there, for the Senile Old Hams who who are just a bunch of little old ladies, chatterboxing away for lack of anything more important to do.

Most of these old geezers, albiet some younger geezers also, probably work totally from store bought equipment, into store bought amplifiers, into store bought antennas.

I welcome the No-Code Techs. I feel it is a great way to get into Amateur Radio so you can then decide what coursee of the hobby you wish to pursue. Thanks to the onrush of N0 o-Code Techs, many of our bands that were close to being lost to commercial interests can now be saved.

When I was first licensed back in 1959, upgrading or should I say, back in those days, upgrading to Tech was in effect a downgrade of magnum proportionl . Too all of you new guys, If a Novice decided to upgrade to Tech class, he wuold loose all of his HF priviledges, besides, the 2 meter band was off limits to techs. Today, Novices even have some voice priviledges and upgrading to Tech opens up more opportunities, not takes them away.

Also, a novice license was only good for one year, then you had to stay off the air for a year, or upgrade, (downgrade) to tech, or move onto General.

Again, Welcome No-Code Techs, enjoy the priveledges afforded you, and consider passing your 5WPM which opens up yet another whole new world of excitement to you.

CALIFORNIA CODES
VEHICLE CODE
SECTION 5005

5005. (a) Any person holding an unexpired amateur radio station
license issued by the Federal Communications Commission may, after
the requirements for the registration of the motor vehicle have been
complied with, also apply directly to the department for special
license plates, and the department may issue special plates in lieu
of the regular license plates. The special license plates shall be
affixed to the motor vehicle for which registration is sought and, in
lieu of the numbers otherwise prescribed by law, shall display the
official amateur radio station call letters of the applicant as
assigned by the Federal Communications Commission.
The applicant shall, by satisfactory proof, show that he or she is
the holder of an unexpired license.
(b) The department shall not issue more than one set of special
plates for any licensed amateur radio station.
(c) In addition to the regular fees for an original registration
or renewal of registration, the following special fees shall be paid:

(1) Twenty dollars ($20) for the initial issuance of the special
plate.
(2) Twelve dollars ($12) for the transfer of the special plate to
another motor vehicle.

----- End Include Text -----

Note that 5005(b) clearly states that only one set of amateur
plates may be issued to a station (callsign).

>The CA DMV might need a bit of convincing, though.

It isn't the DMV you need to convince; the state legislature would
have to change the Vehicle Code.

Source record: 250447

bruces@mpd.tandem.com (Bruce Sawtelle) asked:

BS> Can anyone give me some recommendations/results about some of the 2M
BS> thru-glass antennas. I realize they're not as efficient as some of
BS> the better 5/8w antennas, but we've got pretty good coverage for the
BS> repeaters down here in Austin.

I use an Antenna Specialists thru-glass antenna on my car and I have no complaints whatsoever about it. In fact it was a necessity because when I got my new car (A Saturn Wagon) I had no choice: Everything is polymer. The only metal surface is the hood.

The antenna was easy to install and works very well. Since I also used a roof mounted 5/8 wave on the older car, I was able to compare performance. I could find very little difference between the two. I run my HT in the car with a 30 watt amplifier.

This antenna is a 1/2 wave 2m only (not dual band). Larsen also makes an on glass antenna in mono and dual band varieties. Both the AS and Larsen antenna also have "cellular" look-alike versions. Expect to pay $40 to $60 unless you can locate one at a hamfest. I paid $5 for mine :-)

| ^^^^^^^^
|>But modifying a radio (or even building one from scratch) isn't subject to
|>part 15 or part 97 or any other FCC rules. Only operating it is!
|
|Hi Brian,
|Were you planning on not listening to your HT? As Gary implied, if
|you modify your HT's receiver it might be in violation of Part 15
|due to illegal emissions. Turning the receiver on is `operating' it.

Jeff,
The issue being addressed here was whether an officer of the law
would have any grounds for confiscating a radio that you have modified.
If you have followed the entire thread, you know that the above statement
is not as ridiculous as your out of context quote tries to make it appear.

I stand by my statement that making such modifications, as with building
a radio from scratch, is not illegal. I have never disputed that you are
then responsible for ensuring part 15 compliance, should you choose to
operate it.

-Brian

BOB - Maybe you can explain to all of us how reducing the separation between transmit and receive frequencies allowed you to fit more stations than before, even though their signal bandwidths were not decreased?? The transmitter still takes 20 kHz and the receiver therefore still listens to

a 20 kHz window. Changing the spacing between them does not provide additional spectrum to accomodate more users; decreasing spacing merely adds increased filter/duplexer losses and reduces the overall efficiency of the link or repeater system.

Now just to set the "We did it first" record straight, the FCC Rules governing sharing of the 470-512 MHz TV channels with land mobile were written and implemented in the late 1960's. Thus I cast serious doubt on Bob's claim that "In recent years the FCC has followed our example in planning the 470 - 512
commercial bands." Talk about revisionist history, this one even uses a time warp!

In fact, the frequency separation was chosen SOLELY because the TV channels are 6 MHz wide by FCC decree, and therefore the only logical separation HAD to be 3 MHz to maximize occupancy of the available 6 MHz windows. Sadly, nobody thought enough about the effects of the highest base/repeater transmitter at bottom.edge.freq+2.9875 MHz on the lowest receiver at bottom.edge.freq+3.0125 MHz (which is a T/R separation of only 25 kHz) to mandate some common sense geographic separations as well.

Getting back to the issue, the T/R spacing INSIDE the 6 MHz TV channels has absolutely no bearing on the T/R spacings of other systems operating on different modes outside the subject frequency window. If anything, the NoCal bandplan has probably STIFLED growth of traditional amateur voice/data repeater systems in the (non-TV) 432-450 MHz portion of the amateur UHF band, because standard commercial UHF equipment with the FCC-mandated 5 MHz T/R offset cannot be used in NOCal without significant modification. In this case having no standard is still better than having the WRONG standard.

And last, look at how efficient digital communications is when compared to analog. Take a standard telephone line that runs from 300 to 3800 Hz. The phone company digitizes that into a DS0 data stream that runs at 64 kbps. Where is the efficiency of digital in this arrangement, and how are you going to put more digital signals into the same NTSC 6 MHz video channel, Bob??

: Who would a person contact regarding the interference problem? The OO
: for Wisconsin? A Milwaukee area ARRL representative?

The ARRL Section Technical Coordinators (TC) are a good place to start. The TC will usually know of local-club RFI Committees, local volunteers (Technical Specialists) or other possible sources of help. You can locate your TC through your ARRL Section Manager (SM). The Section Managers are all listed on page 8 of any recent QST. Most list their telephone numbers. Give the SM a call and ask to be put in contact with the TC. (Do remember that the SM and TC are unpaid volunteers.)

ARRL has prepared a number of interference packages to offer some fast help, plus our book "Radio Frequency Interference: How to Find It and Fix It." The ARRL "EMI/RFI Package" contains starter information, plus a pamphlet that will help explain interference in non-technical terms. You can obtain a copy of the pamphlet from the ARRL Technical Department Secretary at the address in my sig (SASE is appreciated). ARRL Members can obtain the package free of charge by sending a request for the package plus a 9X12" SASE with two first-class stamps to the ARRL Technical Department Secretary.

Electronic copies of the information packages are available from the ARRL automated email server, info@arrl.org, and at the FTP site at oak.oakland.edu. (I do recommend you obtain a paper copy of the pamphlet; it is more effective with a neighbor than a computer printout!)

If you are having an interference problem, obtain the book and/or the information packages and contact your TC. If you have any questions about the material, or if local help is not available in your area, you can contact me here at ARRL Headquarters.

I am having the following noise problem with a mobile installation.
Any suggestions regarding finding or eliminating the problem would
be greatly appreciated. The car is a 1991 Isuzu Trooper and the
rig is a Ten Tec Triton 4, and a Kenwood ts430. The antenna is an
Outbacker Perth mounted on the spare tire carrier on the rear door.

I get a s5+ static noise while the engine is running.
It goes away when the antenna is disconnected.
It does NOT change pitch or volume with load or RPM.
I have grounded the hood, engine, rear door, exhaust, and radio.
I have not received interference from passing vehicles.

It seems that the noise is related to the ignition system
and i am checking with Isuzu regarding resistor wires or
shielded wires.

reply here or via e-mail

thanks,

:
: I am not interested in the legality, just the capability.
:
: Just curious,
: Dave
: N9HUR

Most amateur radios , can be modified very easy to x-mt on
any of the freq s that they can receieve.
There are several manuels available showing how...
But to get it to work on freqs that it cannot reveive is
more difficult , and it would be more practical to get ,or
build one specific to those freqs, most 10 meter rigs recieve
from 26 mz to 30 -or 32 some a little higher , most 2 meter
will receive as low as 116 to 164 mz..
It is very easy to modifie these , a full coverage hf rig
will recieve all freqs between 0.030 mz to 32/33 mz and can
be easily modified, the 6 meter rigs would be able to to go
from 35mz to 65/70 mz (I think, I have not ever used a
6 meter rig).... Also the uhf rigs are about the same..
some I have read can be expanded more then others...so yes
SOME and most can be , but not all ,it would depend on
the "brand" as for the legality , that also depends on
what you are licensed for , Ie: if you have a mars licence
you may have a rig that xmts on mars freqs, also..
if you or your buisniss has an authorized bussiness freq
you could use a ham rig, but yu said you don't care about
the legality, I suggestt that you take care about the legality
and make sure you or who ever operates the rig knows where
it is ok to transmit , there are severe penaltys for xmting

on police/fire freqs, also you should be aware of which
freqs are used for air traffic , location signals ,
and many other things , as you could cause severe problems
with out knowing it , many of the locateing signals cannot
be "heard" but are there, these are critcal to planes landing
and takeing of or comeing into traffic areas...so
I strongley urge that you don't start xmting out of band
unless you are authorized to , or/and learn enough to avoid
causeing perhaps 100 people to die in a plane crash.
Apparently you don't know much or you would have known
what radios can be modified , and to what freqs.

3710. RE:w5yi petition

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-20 17:30:54 UTC
From: garryr@netcom.com
Message-ID: <garryrD5r1zI.D68@netcom.com>
Source record: 250458

Well I personally am glad that this petition was filed.
I hope it gets accepted.
Some may not know what has led up to this , a station in
Main K1MAN , Ted Baxter has been creating alot of trouble
for hundreds of hams , by playing loop tapes of very quest-
ionable content ,(not ham related) he plays them several
times a day , with no regard as to if anyone else is on freq.
He dose not respond or seem to hear any one when they try
to tell him the freq is busy ,many beleive he dose listen
but if he dose he ignores what he hears. If you had a
emergency he dose not aknowledge "breaks" or anyone.
He uses the excuse W1AW dose it so can I. Right now tech-
nically I guess it is legal to broadcast one way bullitons.
His abuse of this has led many to realize that if Baxter
can do it what is to stop more from doing it ? ...in fact
I have heard him encourage the idea that more hams start
doing this , is this what we want on HF ? a bunch of ???
playing loop tapes all day and all night ...?
It is unfortunate that a station like w1aw will also have
to stop the bullitons and cw practice , but if one can do
it another will want to and then another and so on...
W1AW or any one could continue operateing , but they
would have to start makeing the cw practice and bullitons
A 2 way deal ,or perhaps even a "net" say the W1AW
announcement net , take checkins from around the country
then make the ARRL anouncements ,stations could relay ,
these announcements to parts of the country that could
not hear W1AW , isn't that what the American Radio Relay
League used to be about ?...this could also be done on
CW , makeing it 2 way would make it something other
hams could participate in , it would be excellent practice.
A written record could be kept and posted in QST to
check copy..There are a lot of ways W1aw will be able
to continue announceing news if they use a little
imagination , and yes even Ted Baxter could continue
his nonsense , if he can find another station to
"talk to" but the one way broadcasts need to stop.
Thats all for now, also I thank W5IY for getting
the petetion started , and KO4TA , and many others
for the hard work they are putting in toward makeing
a needed change.

3712. Counterpoise question

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-20 17:35:54 UTC
From: erik@csn.net
Message-ID: <3kkedq$7r5@news-2.csn.net>
Source record: 250459
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

I have just purchased a Kenwood AT-50 antenna tuner for my station. The AT-50 manual says that the tuner should be connected to a "good earth ground". If none is available, I should "use a counterpoise". My shack is on the second floor of my house, so I have no ground wire. Also, there are no pipes in that area that can be used.

I want to use a counterpoise with the tuner to eliminate as much RF from the shack as possible. All the books I have read on antenna design say that if you use a counterpoise system with a tuner (connected to the ground terminal), you should use 234/F=Length of counterpoise wire (where F is desired freq in MHz). (The good ol' quarter wave formula.) However, the AT-50 manual says to use the following formula for determining the length of the counterpoise wire: (1/4 * F) * (0.95) * (O.N.) = Counterpoise Length where F is the Frequency in MHz, 0.95 is the "wavelength reduction rate", and O.N. is any odd number.

These formulas are very different. In the first, as F gets larger, the length get shorter and in the second as F get larger, the length also gets longer. Which formula is correct? Are they both correct? If so, why?

Any help, comments, or suggestions would be greatly appreciated.

Substitute wavelength for F and it makes sense. I'm sure this is the
very first time a Japanese equipment manual has been, shall we say,
garbled :)

Eric -
They do NOT slash the zeros, either through ignorance or
convenience I do not know which. It is confusing, but better
than nothing I suppose.

My call is WB0SLT and ever since I moved to CA years ago,
I have never been able to get a plate with the zero slashed.

From the experiences I had though, I would recommend you
learn as much as you can about the process and find (if possible)
a knowledgable DMV clerk as I usually need to explain the
difference between Amateur and Vanity plates to the clerk. Vanity
plates ARE expensive. good luck.

3719. Illegal Call sign Usage

Newsgroup: rec.radio.amateur.misc

I need some opinions regarding a problem with someone using my call illegally.

I had only suspicions at first (recieving QSL cards for HF contacts during periods of time I did not even have a station up) but then I received a letter from someone back in Minnesota (where I am originally from) telling me of their friend using my call but refusing to give either the guilty party or their name.

I notified the St Paul FCC office with a copy of the letter and the other points of suspicion. I don't expect them to go out and find the pirate, but an acknowledgement with a form letter or card would have been nice. I only want to be covered in case they pull anything illegal.

What else would you do?

Steve Howard

I agree. I guess my comments were made under the incorrect assumption (by me) that everyone knew RS "no interest" charges are highly conditional and when any of the conditions are not met, the interest rate is ridiculously high. It wasn't very nice of me to make that comment as it was probably interpretted as me rubbing your nose in it. I apologize.

> The CA DMV might need a bit of convincing, though.

Well, '/' isn't a symbol that the Calif DMV puts on license plates.
Defaceing a plate, either with a '/' or a '-' by definition is a
felony in California.

(For the nit pickers out there: Section 4463. However, this is with
the intent of defrauding the DMV. Simple modification or altering of
a license plate is prohibited in section 4464.)

Jeff
With California Arts Council plates, SKYLD.

By the way, you can't get your callsign (at the special rate) on a CAC
plate. The computer only allows CA (for Cal Arts) or CH (for Cal Ham).
I suspect that if you talked with the manager and requested CA plates
with the callsign as a "vanity" plate at the vanity plate rates you
could get away with it.

There was talk last year that the California Police Officers Association
wanted to ban "special" (i.e.Yosemite, CAC, Big Sur etc.) plates since
they look like out of state plates. Well, the Yosemite plate do look like
the Nevada plates.

Unfortunately, gang activity has become a problem at several theme parks.
While most hams (unless in a pileup) wouldn't resort to violence, the
park operators are not about to start trying to figure out who might or
might not use thier knife.

While on the other hand, park security uses the radio to attempt to stay on
top of disturbances. Whether justified or not, they have the right to limit
access to park with people with radios.

It's just like gun control, "I'm ok, you might be OK, but it's them others".

I tried MSCAN but couldn't get it to work with my VGA display
adapter. It requires a configuration step in which you specify
your VGA card type. I picked the WD93... (don't recall exactly
right now) corresponding to the chip in my machine. Didn't work.
Tried installing a couple different VESA drivers known to work with
other applications. Picking the VESA choice in the MSCAN set up
didn't work either. The screen went mostly blank with speckles
and the machine started beeping.

If you want to receive SSTV images with the least amount of
effort, grab a copy of /pub/hamradio/pc/digital/atv/ezsstv.zip
from oak.oakland.edu.

>
>Jim, AA7MY, Tucson
>Jim >> "Facts are stubborn things...." John Adams, 1770

The IF-232C is very necessary. Its purpose in life is to convert
RS-232 to TTL levels and back. There are a couple different ways to
make your own RS232 to TTL converter, one is decribed in message with
the same heading above. I made my own using 1488 and a 1489 and a
7404. Works quite well. You will also need to get 2 chips and install
them inside the TS-440S/AT. Kenwood price is kind of high, but I was able
to find them from outside source for around 15 bux. Of course no docs.

There are several programs out there that are written to contol the
440. Naturaully am partial to the version I wrote. 440_5.zip

But weather its worth while or not, I had fun developing the hardware and
software to do it, but as far as direct control, you can do about every-
thing from the front control of the 440, but if you like to build things
and learn from it, its alot of fun to do.

Good Luck and have fun

Snyder in resonse to Leif Erickson's truck questions stated that there was a new newsgroup for 4x4 vehicles; however, I haven't been able to locate "rec.autos.4x4". Any additional info? Am partcularly interested in Jeeps--is there a users group specific to this out there somewhere?

Also, I think what Leif was trying to get across is "HOW" people setup 4x4's for ham gear since it's a little rough riding for the equipment. Try looking at Yaesu's FT-3000 series for "off roading" rugability. There is different mounting requirements, etc. when you are combining these two sports. Let me know if you have any specific questions.

Source record: 250333

I don't understand why people are picking on the no-codes. Cw doesn't make a person a good operator. Just listen to a pile-up on 20meters sometime and there are extra class acting like they are on ch 19. What needs to happen is people have to start elmering these new hams whether they be no-code or Tech plus. There was a 13 year old who got his no-code and went on to get his extra and he was a darn good operator all through. Don't discourage these new people help them. The more people we have using the ham bands the safer they are. If we lose them then we *ALL* will be on 11m :-(. 73 de Gary/WR1U EXTRA CLASS

3737. Mods for Standard C5718DA?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-20 23:00:31 UTC
From: larryp@beeper.charm.net
Message-ID: <3kkqes$mn8@canton.charm.net>
Source record: 250334

Does anyone know of any mod information for the Standard Dual Band Mobile C5718DA?

Thanks

Larry Putman WB3ANQ

larryp@beeper.charm.net

3738. IPS Daily Report - 20 March 95

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-20 23:14:58 UTC
From: rwc@ips.oz.au
Message-ID: <3kl29i$ru7@flare.syd.ips.oz.au>
Source record: 250335
Cross-posted to: aus.radio,ips.solar.activity,rec.radio.amateur.misc,rec.radio.info

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 20/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 20 MARCH AND FORECAST FOR 21 MARCH - 23 MARCH

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 89/33

GOES satellite data for 19 Mar
Daily Proton Fluence >1 MeV: 8.2E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.8E+09 (very high)
X-ray background: B1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
21 Mar 22 Mar 23 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 21 Mar: 90/34

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 19 Mar
Learmonth 7 2212 3221
Fredericksburg 5 3
Planetary 6 7

Observed Kp for 19 Mar: 2122 2222
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
21 Mar 10 Quiet to unsettled
22 Mar 5 Quiet
23 Mar 10 Quiet to unsettled
COMMENT: A slight increase in the level of activity is possible on 23
Mar due to a long-duration flare and disappearing filament late on 20
Mar.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
20 Mar normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Mar normal normal fair
22 Mar normal normal normal
23 Mar normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
20 Mar 33 near predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
21 Mar 30 Daylight enhancements of 10-20% and otherwise near
predicted monthly values.
22 Mar 30 As for 21 Mar.
23 Mar 30 As for 21 Mar.
COMMENT: Observed Townsville and Hobart frequencies: near predicted
monthly values.

hamilton on BIX (hamilton@BIX.com) wrote:
: The claim that the retailer had his terms posted near the register
: does not hold up in court. He has to show a "meeting of the minds"
: that you were aware of and accepted his terms. He undoubtedly knows
: that, he's just trying to bully.

Except that retailers are under virtually no obligation to accept returns of non-defective equiptment in any state I've ever lived in. As far as I can tell, the dealer was generous taking the unit back at all, and charging 15% for the "evaluation period" does not seem even slightly unreasonable. If you thought you were going to take the radio back and that was important, you should have asked about their terms. Assuming that they would let you bring it back was not a good assumption.

73,

Bret

: >
: Substitute wavelength for F and it makes sense. I'm sure this is the
: very first time a Japanese equipment manual has been, shall we say,
: garbled :)

This thought also occured to me so I called up Kenwood tech support and
the person I spoke to there said that F indeed stood for frequency
in MHz. However I should add that my whole converstion with him did
not make me feel that he knew what he was talking about.

EA-RTTY Contest

The Spanish EA-RTTY Contest starts 1600 April 1 until 1600
April 2 on all 5 HF bands 80 through 10 meters according to
IARU band plans. (Please note revised date for this contest.)

Classification:
A) Single Operator All Band.
B) Single Operator Single Band.
C) Multi-Operator All Band only.
D) Short Wave Listener.

Exchange Message:
RST plus CQ zone number.
EA stations send RST plus *Prefijo Provincial* and CQ zone
number. There are 52 Spanish *Prefijos Provinciales*

QSO Points:
On 10, 15 and 20 meter bands, score one point for QSO within
own continent. Score two points for QSO outside own continent.
On 40 and 80 meter bands, score three points for QSO within
own continent. Score six points for QSO outside own continent.
Contacts between stations in the same DXCC country are valid
for Multiplier credit, but have Zero QSO points value.

Multipliers:
On each band, count one multiplier point for each CQ zone and each Spanish Province (*Prefijo Provincial*).

Final Score:
Total QSO points from all bands times total Multipliers from all bands.

Trophies:
Award and plate to winner in Class A).
Award to winners in Class B), C) and D).

Logs:
Use separate log sheet for each band. Include Summary Sheet showing, Scoring and other essential information. Official Log forms are recommended. Mailing deadline for all entries is May 5th 1995. Send completed logs to:

EA RTTY Contest Manager, Antonio Alcolado (EA1MV). P.O. Box 240, -9400 Aranda de Duero (Burgos), Spain.

IPS WEEKLY REPORT
---
10 MARCH - 16 MARCH

DATE OF ISSUE: 17 MARCH 1995

INDICES:

DATE 10 11 12 13 14 15 16
10CM 79 76 76 77 79 81 84
A 13 23 26 29 15 16 (11 ESTIMATED)
T 47 48 66 49 34 12 21

SOLAR ACTIVITY WAS VERY LOW 10TH TO 13TH, AND 15TH MARCH; AND LOW 14TH AND 16TH.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS UNSETTLED TO ACTIVE ON 10TH, INCREASING TO ACTIVE ON 11TH, ACTIVE TO MINOR STORM OM 12TH, CONTINUING AT MINOR STORM LEVELS ON 13TH. THE FIELD REDUCED ON 14TH TO UNSETTLED TO ACTIVE, THEN QUIET TO UNSETTLED ON 15TH TO 16TH MARCH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE ENHANCED BY 15 PER CENT 10TH TO 11TH, 15 TO 30 PER CENT ENHANCED 12TH TO 13TH, NEAR NORMAL TO 15 PER CENT ENHANCED 14TH, AND NEAR PREDICTED MONTHLY VALUES ON 15TH TO 16TH MARCH.

FORECAST (17 MARCH - 23 MARCH)

SOLAR: LOW.

GEOMAGNETIC: 17 MARCH - MOSTLY UNSETTLED, WITH BRIEF ACTIVE PERIODS POSSIBLE; 18 TO 23 MARCH - QUIET TO UNSETTLED.

IONOSPHERIC: DAYLIGHT ENHANCEMENTS OF 10 TO 20 PER CENT
THROUGHOUT THE WEEK.

Notes of Interest:
EUROPA, FR/E - Look for FR5HG/E now until mid-April on 10, 15, 20. and 40 meters working all modes.

SPRATLY, 9M0 - The 9M0A expedition between 29 March and 3 April, mentioned in last week's Notes, will operate RTTY on the following frequencies: 7029, 14080, 21080 and 28080 khz. QSL via JA9AG.

TUVA REPUBLIC, UA0Y - A one month DXpedition to this isolated central asian republic in Zone 23, starting in late May or early June, is being organized by AA6EG and UA4LCQ. All modes 80-10 meters including RTTY, are planned. Russian operators will include UA5WE, RB5WA, UA4LC, and others. There is room for an additional American operator. If interested in participating, contact Pat Barthelow, AA6EG, 1388 Boles Ct., Seaside, CA 93955. Tel: (408) 394 5531. Internet:4947@mgs.com, or Packet: AA6EG@K6LY.#NOCAL.CA.USA.NOAM

The 1994 RTTY operator of FT5XJ told W5ZPA in a telephone conversation that some QSLs have gone out but the remainder have been delayed for about a month, due to a computer problem.

The VK2SG RTTY DX NOTES are available on Internet via Telnet or FTP at ab6z.ampr.org. The directory is called - forward slash - rttynote
(Note the - forward slash - ...NOT a - back slash -)

For next week's bulletin send your bandpass and notes of interest to Luciano, I5FLN at ZS5S.ZAF.AF

73 es good hunting de Jules W2JGR at W5KSI.#NOLA.LA.USA.NA

3743. IC(2/4)SRA owners wanted

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-21 00:12:49 UTC
From: yuri@macline.com
Message-ID: <2613501855.6858542@macline.com>
Source record: 250340

I'm looking for anyone who has one of either of these rigs (Icom IC2SRA or IC4SRA) who would bother to tell me what they think of them. I think I'm interested in one, but I would like to hear opinions to make sure. The 440 version is my real interest, but I'm sure they'll both work similarly.

Thanks and 73,

KB8RFU
Yuri.

3744. Re: AM vs. FM -> Aircraft?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-21 00:23:29 UTC
From: leblancm@gel.ulaval.ca
Message-ID: <3kl6a1$lkv@goudron.gel.ulaval.ca>
Source record: 250341

While it is true that propagation is not dependent on the modulation technique being used, it is also true that, for weak signal work, AM is better because the bandwidth is somewhat smaller, and thus less thermal noise enters the receiver.

For the same reason, DX at UHF/microwaves never uses FM, but rather SSB, which is the type of analog modulation that occupies the least possible bandwidth.

73.

de Mario Le Blanc, VE2GTP

In article <D5r63s.9x8@spaceworks.com>, billhar@spaceworks.com (bill harris) writes:

They certainly weren't clogged this past weekend! Lots of wide open
spaces on every HF band!

Actually, if you look closely, you'll see that contests don't clog
every band. Nor every weekend. There are only a few major contests
that are capable of clogging bands -- and those are generally one
mode at a time, leaving plenty of room for other activities.

On the rare occasions that a contest does clog some bands/modes, it
just might be because a whole lot of people like the activity.

Welcome to the world of ham radio. Your call sounds great. I am partial to calls with the suffix u in them. My original call was ka1uep and now is wr1u. Keep it even when you upgrade, it's a good cw call. 73 de Gary/wr1u

Gary Ricketson (garryr@netcom.com) recently wrote
in <garryrD5r0sK.BI2@netcom.com>:

: Lets give a worse case scene , you and your kids are out bicycleing
: in a rurual area , a truck accidently hits one of your kids ,
: there are no phones or houses near by , your kid is dieing ,
: but you have a hf rig , just about the time you are going to give
: directions to your location , some idiot like k1man starts playing
: his one way "loop tapes" ,"bullitons" , and the station you
: were giveing the info to cannot hear you any more ,not even well
: enuff to establish another freq , one way broad casts have no place
: in bands that are intended for 2 way communications.

You might learn how to use the vfo and listen up or down from the
frequency. Most nets and communications do move + or - the QRM. Most
gentlemen have practiced this concept with ease for many years. This
proposal does nothing to reduce the real QRM on the bands. The real QRM
comes from stations who think they own the frequency. Be flexible, move a
little bit, it could save a kids life.

VK2 President's Message

This is Michael Corbin VK2PFQ.

Here we are again another week into our campaign for FEE
FREE Amateur Radio. As with last week I intend reading further
extracts of Hansard from last weeks Parliamentary Debate. Last week
I read the speech by the mover of the motion Mr. Elliott, member for
Parramatta. This week I'll read the speech of another Government
Member as well as one from the opposition. This will show you both
sides of the spectrum. You might get your tape recorders ready, but
first a bit more preamble.

You will recall last week that I asked you to now write to your
Senators and enlist their help, as this matter has to go to the Senate for
debate. During the week, I have received more copies of letters from
the Democrats' Whip Senator Vicki Bourne. It so happens that this
lady is most interested in finding out more about Amateur Radio
People. Senator Bourne seems to have sent basically the same letter in
answer to all Amateurs who have written to her with small alterations.
I quote from the letter that she sent to Greg Wilson, VK2JWA;

``The Democrats share your concerns at the Spectrum Management
Agency's recommendation for large increases in amateur radio licence
fees. The Agency fails to recognise the benefit the community gains
from the amateur radio community.

``We have raised your opposition to the fee increases with the Minister
for Communications and with the Agency. You will no doubt be
aware that, on 9th March, the government announced that the
proposed new charge had been reduced from $71 to $51. This is
obviously a large improvement, but it still represents a sizeable
increase over the previous fee. We will not finalise our position on
that move until we have received further feedback from the amateur
radio community.

Thank you for bringing your concerns to my attention.....''

Well there you have it an open invitation to write to Senator
Vickie Bourne......BUT do it NOW! Do it TODAY! Do it after the
Broadcast....But whatever you do ... DO IT!!! DON'T put it off!!!

Yesterday I spoke with one of the members of the ALP Caucus
Committee on the Arts, Transport and Communications. He told me that
he personally had received many many many letters as well as personal
representations. He reckoned it was all my fault. Let me tell you I was

flattered to have caused him all that work. Further he indicated that the Government had also received its share of fan mail. This show that your letters did exactly what you wanted them to... To change the Governments mind. Your letters got the fees from $71 to $51. Now you have the opportunity to get them down even further - hopefully to nothing.

Does this mean that you have to write a new letter to another politician? The answer is of course....NO! Lets take a leaf from the politicians book. We are in an age of recycling so....recycle that letter you sent to your member and send it now to the Senators of the Upper House. The Senators that we are particularly interested in alerting to our plight are those of the Democrat persuasion, The Greens and the lone Independent Senator Harradine from Tasmania.

How long have you got to do this...only this week. So don't put it off, do it now. The Lower House sits again in the week beginning the 27th March. The Senate sits next week, so you only have a week to do it. So who do send them to. I'll tell you that at the end of my broadcast. By then you will have heard the political argument of two members of the Lower House, M/s Henzell, Government and Mr. Forrest, Opposition. If these illuminating addresses don't galvanise you into action..... nothing will!! So... pens and pencils ready at the end of these two speeches from Hansard. I have by necessity read them quicker than normal as I have to put a lot of information into a small space.

RADIOCOMMUNICATIONS (TRANSMITTER LICENCE TAX)
AMENDMENT BILL 1994
Cognate bills:

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX)
AMENDMENT BILL 1994

RADIOCOMMUNICATIONS TAXES COLLECTION
AMENDMENT BILL 1994
Second Reading

Mr FORREST (Mallee) (1.55 p.m.)--Here we have another example of this government's propensity to tax the community of Australia with absolutely no mandate whatsoever. We have these bills before us today, with titles which all include the word `taxes': the Radiocommunications Taxes Collection Amendment Bill, the Radiocommunications (Transmitter Licence Tax) Amendment Bill, and the Radiocommunications (Receiver Licence Tax) Amendment Bill.

It seems that this government has an unbelievable preoccupation with tax, trying to satisfy an insatiable thirst for revenue. There is a suggestion that everything that moves, and sometimes even everything that dies, should be taxed; and not only taxed here, but taxed at a whole variety of different points. I have spent 20 months in this parliament, Mr Deputy Speaker; and given what I remember of the March 1993 election, I would say that if this government has any mandate whatsoever it is not to increase taxes. But here we have another example of its preoccupation. The government is so preoccupied with taxing that it wants to tax hobbies.

I have noted that the government has responded to what has been a fairly massive degree of representation, and I have noted that most members have received letters from persons within their own electorates who are amateur and ham radio operators. I do not think the government can take too much credit for reducing a proposed increase in its tax on amateur radio operators. All it has done is to reduce it by $20. It is still an increase in a tax on a hobby.

I can appreciate that there are other elements, and that the purpose of this legislation is to enable some flexibility in the payment of annual licence instalments. There may be some merit in that, and to that extent the coalition is not opposing these bills. However, my namesake, the honourable member for Forrest (Mr Prosser) has just appealed to the government to reconsider its intent to tax a group of Australians who make a contribution to our community. I would like to take the opportunity later to demonstrate that it is a valuable contribution. The government ought to consider what it might cost a government to provide the sorts of resources in terms of public safety and contribution to public events that are provided by ham and amateur radio operators.

Indeed, when it is considered that the annual revenue from licence renewals is something around $100 million per year, it is clear that it is already a significant source of revenue for the government, so I was particularly annoyed to see the Spectrum Management Agency proposing initially to double licence fees. I was at least somewhat relieved to hear the Parliamentary Secretary to the Treasurer (Mr Elliott), when he introduced these bills, say that there has been some amendment to that.

The Spectrum Management Agency currently supervises about 250,000 radio licences. The fees for these have in the past varied from $18 a year for smaller marine licences and for CB and VHF operators to some huge amounts for multiple public mobile telecommunication services, fees for which often amount to several hundreds of dollars-- even $700,000 per year on big installations.

I want to address the assistance that is provided by amateur radio operators, particularly in emergency situations. The support they provide to community organisations has been a consistent part of their ethos, and has been promoted by radio operators as part of that ethos for decades.

One of the other valuable contributions--I have a notable number of international radio operators in my own electorate--is the contribution they make to the worldwide promotion of goodwill because of their community and international communications. I have been informed by some of them that, when they have made comments about this increase to some of their international corresponders via the radio spectrum, other amateur operators in other countries are completely surprised to find that this country wants to introduce such a dramatic increase in fees. I think it ought to be labelled as a cynical revenue raising exercise.

I note that the previous speaker, the member for Watson (Mr Leo McLeay), called us cynical and mean spirited in the contributions that we have already made to this debate. The only mean spirited people that the community of Australia ought to be alerted to are those who occupy the government benches. It is unbelievably mean spirited of them to tax community and amateur operators out there who, as I have said, provide such a valuable contribution to this community.

The Radiocommunications Act 1992 made provision for people such as community amateur radio operators because it included `adequate provision for use by public or community services'. The act also requires `a responsive and flexible approach to meeting the needs of users'. The substantial increase in licence fees causes me great concern because of its inconsistency with existing provisions of the act.

From that I formed my own conclusion about what a cynical tax raising exercise this is turning out to be. None of my corresponders are encouraged by the government's recent announcements that the amount of the increase is to be reduced. They still maintain that, as amateur radio operators who provide a valuable communication facility to train personnel in what is an important area of communications, their role should be recognised.

As the member for Forrest said, I would urge this government to reconsider that particular part of the legislation because it is completely unfair. I see no justification whatsoever in taxing this particular narrow group of people who are confined by the fact that they are a captive audience because they have fixed locations which are easy to find and, therefore, easily sourced for taxation revenue increases.

Mr Peter Milne of Mildura, whose call sign is VK 3PM, was one of my corresponders. I would like to quote parts of his letter to me in order to make his complaint part of the public record. He introduces his letter by referring to the proposed changes by the Spectrum Management Agency. He then says:

``Amateur radio is a recreational and educational "hobby" pursued by a wide range of people in our community. Amateur Radio is of immense benefit to the community.There are many instances where it has played a crucial and important part in providing emergency communications where civil and military systems have been unable to perform.''

He then provides examples of communications with respect to Cyclone Tracy in Darwin, recent bushfires in many of our states and past earthquakes in New South Wales. He goes on:

``It is a hobby that produces effective self training in technology. Many young people graduate to a career in electronics having had their ambitions developed through such an interest. The Scouts and Guides movements of Australia have many stations used in training of their youth. There is immense social value in a recreational hobby particularly suited to handicapped persons and also senior citizens.''

I continue to quote from Mr Milne's letter. He states:

``The Amateur Radio Service provides a ready pool of trained personnel available for service to the country . . .''

I would emphasise just how important the contribution of amateur radio operators is in rural areas, especially in an area like mine which is 70,000 square kilometres, one-quarter of the north-west of Victoria. The letter continues:

``Australian Amateur radio operators are among the world leaders in development of new technology and have recently made significant contributions to research in areas such as satellite technology and radio propagation studies. The hobby provides a valuable service in development of international relations. There are many more positive aspects that could be mentioned.''

He sought my support to have the proposed fee increases rescinded. He has that support, and he has the support of all of us on this side of the House. It is quite clear that in terms of amateur radio the government ought to have made more appropriate allowances.

Mr Milne's letter refers to some of the community benefits of amateur radio, but there are many others which are impossible to measure in dollar terms. You could not measure in dollar terms the benefit of amateur community radio. Therefore, I find it unbelievable that the government would let its insatiable thirst for revenue override such benefits and that it would propose a cost to services when it has not even considered what it would cost the government to provide such services.

I would like to draw attention to a particular, huge community event that occurs in my electorate. It is the Murray River marathon. The marathon starts as far upstream the Murray River as Albury and ends in Swan Hill, which is the city in which I reside. The role that amateur radio and the communication networks play that ensures the community and public safety of that event is just one example of which I am already aware of the benefit of amateur radio operators.

If we get back to the more particular focus of this legislation, like many other pieces of legislation brought to this House, it is all about tax--for goodness sake, tax it; tax it if it moves! Fuel tax is an unbelievable impost that affects everything we do, particularly those

in rural Australia. I am reminded of the government's obfuscation during its last election campaign when it had those TV advertisements with cash registers popping up at the sight of a tube of toothpaste showing an extra 15 per cent tax. That was a complete obfuscation of the truth, and it completely overlooked the fact that the government's last policy was to remove seven taxes and have only one fair and balanced tax. So, if this government has any mandate, it is not to increase taxes.

Tax it if it dies! Every year in pre-budget deliberations, we hear about death duties and inheritance tax. Tax it if it burns! We recently heard intonations from the government that it wanted to introduce a carbon tax. Thankfully that was knocked on the head. It would have imposed more on-costs to business in this country. Tax it if you sell it-- wholesale sales tax! Tax it again if you buy it! The dramatic increases we have seen in the last 20-odd months in wholesale sales tax completely surpass anything we had originally proposed or intended with the goods and services tax. Tax it if it gains value--a capital gains tax! Now we hear suggestions that if it sleeps it will be taxed--a bed tax. What an imposition that is going to be on the valuable tourist industry of this nation.

When it comes to amateur radio, I think it is outrageous and completely unfair. The government ought to reconsider. It has given some reconsideration, but I think it ought not increase at all this particular component of amateur radio.

My understanding of taxation is that tax ought to be levied on a profit or a likely profit. I remind the government that licence by regulation would prohibit amateur radio operators having a profit. So how could taxing it be right? Tax on the use of radio spectrum, which is already set aside by international convention for amateur radio, does not occur in any other country. So it is completely unfair, unjust and flies in the face of practice in other countries. From what I hear, we are already something of a laughing stock in the international communities in which amateur radio communicates. No other country in the world levies such a tax on their amateur radio operators.

Is the government really aware of the size of the group it wants to antagonise by the introduction of this tax and the powerful communication facility they have available to communicate a message about the lack of mandate this government has to tax them? Currently, there are about 18,000 amateur radio operators and, internationally, their numbers are measured in millions--a huge communication network. They have powerful radiocommunications at their disposal-- they talk a lot. As I said, already international reaction is not favourable on this government's intent to tax them. This particular aspect of this legislation has been grossly ill-considered.

Again, because amateur radio operators are a registered minority, they are an easy target. I refer again to Mr Milne's letter where he asks for my support to see what I can do about ensuring that these increases

are not imposed. In his letter he says:

``I require your support towards action to have the proposed fees rescinded and another more suitable approach taken. We would consider it an excellent result if we were granted licences free of charges as is the case in the United States where the community, education and recreational value of Amateur Radio is highly valued.''

I assure Mr Milne that I do oppose this unjust form of tax. The government ought not hide behind its statement that this legislation is all about a positive gesture of allowing greater flexibility in the payment of radio licence charges. I recognise and support professional and large radio licence operators having their fees reduced by taking up payment options. My particular objection is that I consider amateur radio operators an important group of Australians who have a function to fulfil.

The package was developed as a result of public inquiry which was initiated as far back as December 1993 at the direction of the government. This package aims to respond to industry requirements resulting from that inquiry into that more flexible arrangement, so I support that aspect. The new payment options introduced by the package coincide with a whole new licensing computing system and will therefore provide a much clearer and easier administration. At least that part seems to meet some of the aspirations of the industry. But nowhere in the legislation or in reading the background information do I find any justification for the `punitive' attitudes towards amateur radio operators. I do not think they ought be used to subsidise some of the gains that might be achieved for other licensed operators.

I remind the government that we will take every opportunity to remind them that it has no mandate to increase taxes on Australians. We bitterly oppose these arrangements and certainly take offence at a bill like this which seeks to call increases in tax revenue through licence fees `revenue gaining exercises'. They are simply taxes and they cost Australians, and we are opposed to that.

RADIOCOMMUNICATIONS (TRANSMITTER LICENCE TAX)
AMENDMENT BILL 1994
Cognate bills:

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX)
AMENDMENT BILL 1994

RADIOCOMMUNICATIONS TAXES COLLECTION
AMENDMENT BILL 1994
Second Reading

Ms HENZELL (Capricornia) (2.14 p.m.)--Mr Deputy Speaker, I am pleased to contribute to this debate on the Radiocommunications (Transmitter Licence Tax) Amendment Bill 1994 and cognate bills. I was very disappointed to hear the comments of the member for Mallee (Mr Forrest) who, I know, is concerned about all issues that may impact on his constituents. I believe he is not presenting the full facts. I dare say that the criticism in relation to this bill goes back to 18 January when the shadow minister for communications and the arts, Senator Alston, took up this issue in a press release. He said:

``It is difficult to avoid the conclusion that amateur operators have the misfortune to be a disciplined, individually licensed service and, therefore, an easy target for revenue raising . . . ''

And it goes on and on. While we all recognise the contribution made to the community by amateur radio hams, the opposition spokesperson failed to indicate that he had any idea of what was in the report of the Spectrum Management Agency. He said that it indicated that there had been no consultation. The facts are at variance with that statement. Indeed, if the member for Mallee had cared to look at the information, he would have been able to clarify the situation.

On 8 December 1993 the then communications minister, the present Minister for Resources (Mr Beddall), instituted the inquiry. Throughout January and February 1994, the SMA distributed over 4,000 copies of the discussion paper to interested parties, advertised widely and then proceeded to conduct 14 public seminars attended by over 900 people. It received 422 submissions and reported its findings to the then Minister for Communications and the Arts, the present Minister for Primary Industries and Energy (Senator Collins), at the end of May 1994.

At every stage of the proceedings there was close consultation with the Institute of Wireless Operators. Indeed, it was very involved when this issue was being looked at. There is hardly a case for saying that there has been no consultation. There has actually been widespread consultation.

The general line being presented is that the whole basis of the legislation we are now debating--the report of the Spectrum Management Agency, titled Inquiry into the apparatus licence system: a new outlook--came about because we have a down on amateur radio operators in this country. In fact, as is quite clear from the report, the reforms go to the whole management of radio communications.

Yesterday, when the Parliamentary Secretary to the Minister for Communications and the Arts (Mr Elliott) introduced these bills, he made it clear that the licence for amateurs would be a flat rate of $51; the original proposal for $71 had been just that, only a proposal. The reforms are widespread and very pertinent to the handling of this area of operation.

The report includes a number of recommendations. In relation to citizens band licences, there was a recommendation, adopted in October 1994, for class licences. Other recommendations include: the simplification of apparatus licence categories; arrangement for licence terms up to five years with very flexible payment arrangements--one of the key factors in the bills we are debating; the possibility of transferring apparatus licences between parties; and, very importantly, licence fee concessions for volunteer non-profit emergency organisations, such as rural firefighters, search and rescue organisations, coastguards, surf lifesavers and ambulance services in remote areas. Then there was a definite decision to charge for a range of services provided by the Spectrum Management Agency. Those charges are to be introduced on an equitable and transparent basis so that people can understand what the charges are for and why they are paying them.

What irks me is that the opposition parties continually bleat about government charges and cutting government expenditure. But the minute there is a specific option for user pays principles, for making sure that services are provided and that the government is accountable, they are bleating about how shocking it is that we are raising another tax.

I believe this is very unfair. I am sure all other honourable members have made representations on behalf of amateur radio operators. I take the time and trouble to find out the facts. Unfortunately, it seems that some of my colleagues in the opposition--and particularly the shadow minister--have decided that it is easier to score a cheap political point than to go and make a proper investigation. The shadow minister is the person who would like to be running this area of the government. This is a wide ranging report which has a number of very positive reforms for the use of the spectrum. All the shadow minister can talk about is this one small point.

No-one in this country wants to pay taxes but everybody wants services. Local amateur radio operators in my area felt this was an impost. I am sure they will be delighted with the very sensible decision made by the government. It is not about not charging them. Our amateur radio operators have done all the good things that my colleague the honourable member for Mallee suggested. I have no argument with all those good things.

While the amateurs were paying limited fees for the services they received, other essential services were paying much greater charges. One of the key benefits in these reforms is that a lot of these essential services will have a decrease in charges. That is a very sensible rationalisation. I refer to the editorial by Jim Rowe in the March 1995 edition of Electronics Australia. Mr Rowe indicated that he had lots of representations from amateur radio operators. He has taken a very responsible position. He says:

``Amateur licence fees haven't risen for about 10 years, even though the cost of most other goods and services have risen quite significantly in that time. Some sort of rise was probably

inevitable.''

He goes on to say that there will be increasingly fierce competition for space in the electromagnetic spectrum. He says:

``In many ways this is a finite resource, and historically amateurs have accumulated quite a lot of spectrum `real estate'. In fact I understand that in Australia, amateurs are second only to the Department of Defence in terms of their total allocation of spectrum space.''

He goes on further:

``The SMA has sought to base them clearly on the real costs of issuing and renewing licences, and also on managing each licensee's activities--together with a `spectrum access cost' or tax, based on the perceived value of the spectrum segment(s) being used on an exclusive basis. On the whole this seems reasonable, and is in fact the kind of changes taking place in many other countries as well.''

This is rather interesting:

The problem for amateurs is that because quite a lot of spectrum is allocated to them, applying this rationale strictly `across the board' would result in amateur licence fees rising to well over $500 per year.

If we really wanted to put in place a user pays principle, that is the sort of charge that would be allocated because, as Jim Rowe says, a significant amount of spectrum is allocated to amateur operators.

The other issue that has to be taken into consideration is that, if you are going to get into this hobby, which has lots of positive spin-offs, including emergency availability when there is an accident or a major disaster--and I commend the comments of my colleague the member for Mallee in this matter--the equipment will cost you at least $2,000. It is a considerable investment for people who choose to become involved or interested in this area or hobby. Therefore, a charge of $51, or even $70, would not seem to me to be a major impost.

One of the concerns brought to me that I responded to was about what appeared to be a sudden jump. Jim Rowe--and I assume he knows a great deal more about this area than I do--finishes his article by saying:

``It might well be prudent for amateurs to swallow hard and accept this fee rise, without much fuss. Attracting a lot of interest might cause renewed demands for some of that precious spectrum space, by potential users willing to pay a lot more for the privilege.''

That has not really been taken into consideration by some of our operators, for very well-intentioned reasons, but it has also not been taken into consideration for what I would consider fairly cheap political reasons by some members of the opposition, particularly by the person who would like to be making the decisions in this area--

Senator Alston.

If we look at the suggested reforms to licensing types, we see very clearly that this report has done a very good job. It has done a very good job because there has been, as I said before, this wide ranging consultation. There was a commitment that this consultation would continue in relation to a range of issues, including the cost to amateurs. Page 5 of the SMA discussion paper suggested that the licence types should be:

.workable in number;

.clear, simple and mutually exclusive;

.able to accommodate new developments in technology and service delivery;

.be consistent with SMA management functions, such as planning, applying licence conditions and setting fees; and

.be administered efficiently (for example, by automation).

Thus, as a general principle, there should be a minimal number of `broad purpose' licence types. This approach is consistent with the majority of submissions to the inquiry.

In fact, it came up with a grouping of 16 new transmitter licence types with three new receiver licence types which would be based on definitions in the Australian spectrum plan. I just want to go through those briefly to indicate the breadth of areas we are talking about. The first area is aeronautical. The second area is aircraft. The third area is amateur, and within amateur are several subgroupings: unrestricted, limited, novice, intermediate, novice limited, amateur beacon and amateur repeater. They are allocated a proposed differing amount. The fourth area is broadcasting, which includes broadcast service and narrowband area service. The other areas are defence; earth; fixed; land mobile; maritime coast; maritime ship; multipoint distribution station, MDS; outpost; public telecommunications service; radiodetermination; scientific; and space.

We are talking here about a very important area, particularly with the increase in high tech and communications looking for areas of the frequency. I believe the amateurs continue to have a very fair operation. The sorts of licences we are intending to provide under this bill indicate that we are prepared to be very flexible about the way those payments are made--to make it much easier, for instance, for retired hams to be able to make those payments. I believe we have done a very good job here.

I want to further comment on the public or community service providers. One of the recommendations in the report on page 11 states:The SMA considers that concessions should apply to volunteer, non profit, emergency organisations involved in rural fire fighting, search and

rescue, coast guard and surf life saving activities (principally providing safety of human life services) and to individuals who support such organisations. Organisations involved in ambulance services in remote areas will also qualify for concessions.

The sorts of concerns that have been raised by a number of people, including the amateurs, have certainly been considered in this report. The government and the agency have responded to a range of calls from the community about the method of charging, which has been suggested is in line with recommendations of the House of Representatives Standing Committee on Transport, Communications and Infrastructure and the public inquiry process.

Some concerns were put to me about the fact that citizens band radio holders had been provided with a class licence. But, from information given to me, it is clear that the CB bands - although they appear to very numerous--occupy a relatively small part of the spectrum and do not require the sort of regulation or representation the SMA has made on behalf of the Wireless Institute of Australia in terms of the accreditation of their examinations and international representations.

Although it would appear to individual amateur radio operators on the ground that the Spectrum Management Agency does little for them, a great deal is done on behalf of this group of people--which is about 20,000 across the country. However, this means that about 30 per cent of licensees would experience fee increases--this is where the amateur licence holders are found. Local government authorities, state governments and the emergency service organisations will benefit considerably, as will organisations such as taxi operators and paging services--those small businesses about which the opposition claims to be very concerned. Although I can understand the concerns of amateurs in terms of the CB network, the facts really speak for themselves.

I return now to the amount of spectrum that is available. Amateurs occupy a great deal of the spectrum--44 blocks in 23 different bands, which is well above what is generally available in other countries. So there are 20,000 amateurs with 179 times more spectrum than the estimated 800,000 CB operators. Each amateur uses significantly more power than CB users. As I said before, amateurs occupy more spectrum than most others, except the Department of Defence, which I think we would all agree would require a fair degree of spectrum.

The government, through its consultations, has certainly listened to the voice of a relatively small group, and that is the art of politics. The amateurs have lobbied their members, we have made representations and the government has decided to respond by making it a flat rate, which I believe is realistic and reasonable. I hope that all the amateurs will be very happy with that resolution.

We have not backed down or buckled under pressure, and we hear this nonsense ad infinitum and ad nauseam from the opposition. This has been a process of consultation for more than 12 months, and there have been

further consultations. In my view, it is a good decision and I hope we will hear less from the opposition of this nonsense about another tax.

[end of extract]

Well there you have it....as I said before I read these....If that doesn't stir you into action then nothing will.

If you missed these speeches, then either listen again this evening or consult your Bulletin Board.

If you wish to read the whole of Hansard.... They will be on packet after this mornings' broadcast. Now those addresses...

Senator Vicki Bourne, G.P.O. Box 36, Sydney, 2000

Senator Cheryl Kernot, 145 Melbourne St., South Brisbane 4101

Senator John Coulter, 9 Druid Ave., Stirling S.A. 5152

Senator Meg Lees, 2 Waterloo Street, Glenelg. S.A. 5045

Senator John Woodley, Commonwealth Parliament Offices,
295 Ann Street, Brisbane. 4000

Senator Robert Bell, P.O.Box 96, North Hobart, 7002

Senator Sid Spindler, Eastbourne House, 62 Wellington Pde.,
East Melbourne. 3002

Senator Christabel Chamarette, P.O. Box 137 West Perth 6872

Senator Dee Margetts, Commonwealth Parliament Offices, St.
Martins Tower, 44 St. George's Terrace, Perth, 6000.

Senator Brian Harradine, G.P.O. Box 896J, Hobart. 7001

Hansard extracts in Pres. Msg.

The WIA (VK2 Division) President's address this week contains extracts of the current Hansard, detailing the parliamentary debate about the Amateur licence fees. It makes interesting reading.

Further extracts will be posted as part of the Presiden't address next Sunday, and a summary of the main points raised will appear during the week.

The final part of the address contains the addresses of Senators to whom Amateurs are advised to write, before the bills reach the Senate. The time to make your voice heard is NOW, so please take the time to write.

Note also that your letters to the Federal parliament may be sent POST-FREE - details in another VK2WI bulletin.

FED GOV DEBATE ON FEES

RADIOCOMMUNICATIONS (TRANSMITTER LICENCE TAX)
AMENDMENT BILL 1994
Cognate bills:
RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX)
AMENDMENT BILL 1994
RADIOCOMMUNICATIONS TAXES COLLECTION
AMENDMENT BILL 1994
Second Reading
Consideration resumed from 8 December 1994.

Mr ELLIOTT (Parramatta--Parliamentary Secretary to the Treasurer) (7.10 p.m.)--I move: That the bill be now read a second time.

This bill is one of a package of three bills which amend the radiocommunications tax legislation to implement improvements to the radiocommunications apparatus licensing regime following the findings of a public inquiry held by the Spectrum Management Agency.

The full detail of the amendments in the package is explained in the second reading speech for the Radiocommunications Taxes Collection Amendment Bill 1994.

This bill amends the Radiocommunications (Transmitter Licence Tax) Act 1983 to support the proposed changes by providing for tax to be imposed in relation to transmitter licences in various situations to give effect to the policy of giving applicants for licences greater flexibility in organising their licence arrangements.

The financial impact of the package of bills is explained in the second reading speech for the Radiocommunications Taxes Collection Amendment Bill 1994. I commend the bill to the House.

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX) AMENDMENT BILL 1994

This bill is one of a package of three bills which amend radiocommunications tax legislation to implement improvements to the radiocommunications apparatus licensing regime following the findings of a public inquiry held by the Spectrum Management Agency. The full detail of the amendments in the package is explained in the second reading speech for the Radiocommunications Taxes Collection Amendment Bill 1994.

This bill amends the Radiocommunications (Receiver Licence Tax) Act 1983 to support the proposed changes by providing for tax to be imposed in relation to receiver licences in various situations to give effect to the policy of giving applicants for licences greater flexibility in organising their licence arrangements. The financial impact of the package of bills is explained in the second reading

speech for the Radiocommunications Taxes Collection Amendment Bill 1994. I commend the bill to the House.

RADIOCOMMUNICATIONS TAXES COLLECTION AMENDMENT BILL 1994

This bill is one of a package of three bills which amend the radiocommunications tax legislation to implement improvements to the radiocommunications apparatus licensing regime following the findings of a public inquiry held by the Spectrum Management Agency.

The other two bills in this package are the Radiocommunications (Transmitter Licence Tax) Amendment Bill 1994 and the Radiocommunications (Receiver Licence Tax) Amendment Bill 1994.

There has been concern by some apparatus licensees, particularly amateur radio operators, that changes proposed as a result of the Spectrum Management Agency's public inquiry will lead to significant licence fee increases. Changes to the fees for amateur radio operators are part of broader changes to apparatus licences. Under the proposal contained in Inquiry into the apparatus licence system: a new outlook, released in February, the fees for apparatus licences are to be based on a combination of the administrative and maintenance costs of issuing the licence and a tax component based on the value of the spectrum used.

Many apparatus licence users will see fee reductions under this formula, including the Royal Flying Doctor Service, state governments and taxi services, but some fees, such as amateur fees, were likely to increase under the draft proposal, as published. Most amateurs were paying $37 per annum but under the formula being applied to apparatus licences in general, their annual fee would have risen by between $8 and $34 to a maximum of $71.

As part of the implementation processes for establishing a new apparatus licence regime, it has always been intended that a final round of consultation would take place before fees were set. I am pleased to announce that the SMA has further considered the level of fees to be applied to amateurs in the light of the public benefit that amateurs provide to the community, and that a lower overall fee is now proposed.

In view of the training and experience in communications technology that amateurs provide to young people, and the role that amateurs provide in maintaining communications links in times of emergency, the SMA has decided to reduce the tax component of the licence fee to the minimum level. This will reduce the fee from the proposed $71 to $51 per annum. The fee would be applied to all amateur licensees. While $51 represents a small increase on fees paid for many years by amateurs, the new fee is based on the administration and maintenance services provided to this group by the Spectrum Management Agency, including the cost of issuing the licences, managing interference to their services, issuing and registering call signs, accrediting

examinations, and representing amateur interests in international negotiations. It also represents a reduction of $20, or 28 per cent, from the draft fee proposed prior to the most recent round of consultation.

While there are social benefits of amateur radio, the fee set at $51 represents more than fair value for their access, and ongoing use of large amounts of radiofrequency spectrum. The change in the level of amateur fees will not be offset by any increase in the fees paid by other radiocommunications licensees.

As part of its inquiry processes into apparatus licences, the SMA invited submissions from the public. A total of 422 were received. They covered a wide range of issues and provided a mix of views on how the apparatus licence system could be improved. Submissions were made by individuals and a range of organisations. The Wireless Institute of Australia, other amateur groups and many individual amateur licensees made submissions to the SMA.

A majority of submissions to the SMA's inquiry supported the issuing of apparatus licences for periods of up to five years, and greater flexibility for licensees in relation to the payment of licence fees, either by full up-front payment, or by annual instalments which may or may not be equal. With the commissioning of its new licensing computer system in March 1995, the SMA will be in a position to issue apparatus licences for terms of up to five years.

The proposed bills will give spectrum users greater flexibility in organising their licensing arrangements. Under the amendments proposed in the three bills, an applicant for an apparatus licence or a licensee will be able to choose between the following tax options:

(i) for an apparatus licence issued for a period of 12 months, payment of the annual licence fee current at the time the licence is issued;

(ii) for a licence issued for a period of more than 12 months, payment at the time of issue of the total licence fees;

(iii) for a licence issued for a period of more than 12 months, payment of an annual instalment upon issue and on each anniversary of the date of issue during the term of the licence; or

(iv) for a licence issued for a period of more than 12 months, where the licensee has previously elected to pay by annual instalments, and then decides to pay the balance of the licence fees, payment of the balance on the next occurring anniversary of the issue of the licence.

The Radiocommunications (Transmitter Licence Tax) Amendment Bill and the Radiocommunications (Receiver Licence Tax) Amendment Bill provide for the imposition of tax under each of these options.

The Radiocommunications Taxes Collection Amendment Bill amends the Radio communications Taxes Collection Act 1983 to set out the time the tax becomes payable under each option.

Where a licensee defaults on a payment of tax, the licensee will have failed to comply with the act, which would allow the suspension or cancellation of the licence.

The Radiocommunications Taxes Collection Amendment Bill includes an amendment which will enable the SMA to determine that an interest penalty is payable by a licensee who is paying tax upon each anniversary of the issue of the licence, but does not pay upon the due date for an anniversary. Such a determination will be disallowable by the parliament.

The Radiocommunications (Transmitter Licence Tax) Amendment Bill and the Radiocommunications (Receiver Licence Tax) Amendment Bill include a provision which will impose tax if a default persists for 60 days following the anniversary payment due date.

The amount of tax would reflect the total amount payable over the remaining period of the licence.

It is not possible to make a firm estimate of the financial impact of the proposed amendments as it is impossible to estimate accurately what percentage of licensees will take up the option of apparatus licences of more than 12 months when that option is made generally available to licensees and, of those, what proportion will elect to pay the full fee up-front, rather than pay on each anniversary during the currency of the licence.

The overall intention for the legislative package is to provide more flexible methods of paying licence fees for licensees, with no net loss of revenue over the period of the licence. I commend the bill to the House.

AMENDMENT BILL 1994
Cognate bills:

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX) AMENDMENT BILL 1994

RADIOCOMMUNICATIONS TAXES COLLECTION AMENDMENT BILL 1994
Second Reading

Dr KEMP (Goldstein) (7.20 p.m.)--During 1994 a review of radiocommunications apparatus licensing was conducted by the Spectrum Management Agency. One of the recommendations arising from that review was that a wider variety of payment options be made available to avoid the necessity for regular annual licence tax payments when

the licence term exceeds one year.

Currently, the only payment option available to holders of apparatus licences is to make annual tax payments throughout the duration of the licence. Under the legislation now before the House, the Spectrum Management Agency will be able to offer various payment options to licence applicants. Where licences have a duration of less than 12 months, the licence fee will be payable at issue as is currently the case. Licences of more than 12 months duration will attract a number of payment options, which have been set out by the Parliamentary Secretary to the Treasurer (Mr Elliott) in his second reading speech.

In its discussion paper on the apparatus licensing system in December 1993, the Spectrum Management Agency revealed that approximately 40 per cent of licence renewals are processed late, generally because of late payment. Under these amendments, the Spectrum Management Agency, the SMA, will be given the power to make disallowable instruments which will set interest penalties on outstanding amounts. In the explanatory memorandum to the amendments it is stated that the SMA will impose financial penalties for non-payment, rather than suspend or cancel licences, which at present are the only sanctions available to it. These amendments will commence upon the acts being proclaimed, which will allow for any slippage in the commissioning of the SMA's new RADCOM computer records system, which will be required to process the new applications.

The opposition does not oppose the Radiocommunications (Transmitter Licence Tax) Amendment Bill, the Radiocommunications (Receiver Licence Tax) Amendment Bill and the Radiocommunications Taxes Collection Amendment Bill as the measures in them are uncontroversial. The only question which does arise is the capability of the SMA to handle the licensing procedures and administer the changes in taxation. The Spectrum Management Agency recently increased the licence fees for amateur radio services throughout the community. As the government is plainly aware from the speech we have just heard from the parliamentary secretary, its move to do so prompted an outcry from amateur radio operators around the country.

The coalition clearly recognises the contribution which amateur radio services make to the community, particularly the assistance which these services provide in emergency situations, and the support provided to other community organisations. Until recently, this contribution has been recognised by the amateur radio licence fee structure and, as recently as 1992, when the Radiocommunications Act came into force, one of its objectives was to include `adequate provision for use by public or community services' and a `responsive and flexible approach to meeting the needs of users'.

The proposals to increase licence fees for amateur radio services was initially put forward by the government without, in our view, any proper consultation or publicly stated and convincing justification.

The Spectrum Management Agency failed to adequately explain how it arrived at the proposed fee levels. Although we are now told by the parliamentary secretary what these fees will cover, it is still not entirely clear just how the fee levels have been arrived at and why the fees that are now being announced differed from the fees which were originally put forward.

One can only assume that the changes that have been made were in response to the public outcry which accompanied the initial announcements. Once again, we see the way in which the government is making policy on the run in accordance with and in response to pressures within the community rather than on any sound basis which can be clearly argued and justified to this parliament and to the amateur radio operators in the wider community.

The shadow minister for communications, Senator Alston, indicated that he was attempting to ascertain from the Spectrum Management Agency its reasons for increases in amateur licence fees and the reason for an increase of the magnitude which was proposed. The conclusion has to be drawn that amateur operators have the misfortune to be a disciplined, individual licence service and, therefore, an easy target for revenue raising by the government, which as we know is engaged at the moment in a quite desperate effort to raise revenue to close the enormous gap between its spending and its revenue raising. We have seen a very clumsy effort by the government in this case, across the board, in attempting to rationalise the spectrum and in attempting to make decisions about the way in which this will be paid for.

The Spectrum Management Agency's reticence to provide answers to the questions which have been put to it by the shadow minister, and the way in which the amateur licensing issue generally has been handled by the government is, I regret to say, a part of the government's overall, exceedingly bad performance in the communications area. It seems that this area is constantly before this parliament as one requiring substantial criticism from our side of the House and one which is arousing a great deal of concern throughout the community.

We have seen the pay TV debacle presided over by the same minister who oversaw the recent woodchipping embarrassment. We have seen the current problems in this area with the Minister for Communications and the Arts (Mr Lee) under censure from this side of the House within the last 24 hours. A general record of incompetence and unsatisfactory, politically driven policy making has become characteristic of the communications area. It is a disgrace. I regret to say that the instability in government decisions in relation to licence fees for amateur operators is simply the latest example of the government's inability to put policy in this area on a sound basis.

While the opposition will not be opposing this legislation, on behalf of the coalition I put the Spectrum Management Agency on notice that

we will be monitoring its activities extremely closely and, likewise, the decisions that the minister will be taking in this area in the future.

Debate interrupted.

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX) AMENDMENT BILL 1994

RADIOCOMMUNICATIONS TAXES COLLECTION AMENDMENT BILL 1994
Second Reading

Mr LEO McLEAY (Watson) (1.33 p.m.)--I am very pleased to support the amendments that are before the House and I commend the government for them. I must say at the outset that I was surprised at the rather mean spirited remarks of the member for Goldstein (Dr Kemp), when he was responding on behalf of the opposition to the second reading speech of the Parliamentary Secretary to the Treasurer (Mr Elliott). The member for Goldstein seemed to think that there was something terrible in the fact that the government and the SMA had reconsidered the licensing fee that they were going to charge amateur radio operators. I will come back to that later in my contribution, but it is worth while putting on the record that the remarks were mean spirited. As members of parliament, rather than attacking the government for responding to people who make representations, we should be commending the government and the government agency, instead of telling them that we are starting to keep a closer eye on them for doing this.

These amendments will make it easier for apparatus licensees to pay their licence fees. They will now be able to make those payments annually for an apparatus licence, in instalments if they wish, and licences can be issued for a period of up to five years. That puts a little bit more certainty into these things for the licensees. Licensees will be able to have the choice of paying the total fee for the full period or paying by annual instalments.

Formerly, a default in the payment of a licence fee--which was usually an up-front fee--would have resulted in the suspension or cancellation of a licence. There was no scope to allow a licensee a period of grace in the payment of the fees. Often, people who needed these licences as an integral and ongoing part of their business could have been deprived of them through falling on hard times and suffering cash flow problems. These amendments make it a lot easier for business.

There are amendments which will introduce a system whereby people who default on an annual instalment will only lose their licences as a last resort. Licensees will now be able to pay by instalment, paying interest on the late payment of fees and, if still in default, pay the balance of the licence fee for the entire period. As I said, the licence would only be suspended or cancelled as a last resort.

Those amendments to the bills are the result of a long and detailed public inquiry by the Spectrum Management Agency. In 1993, in response to a report by the House of Representatives Standing Committee on Transport, Communications and Infrastructure, chaired by the honourable member for Shortland (Mr Peter Morris), the government directed the Spectrum Management Agency to inquire into the restructuring of licence fees for cost recovery. The Spectrum Management Agency released a public discussion paper, held extensive public seminars and consulted with the Wireless Institute of Australia and the Radiocommunications Consultative Council. Over 4,000 submissions were received, and the amendments before us today are among the many key recommendations to emerge from that inquiry.

The SMA plans to begin issuing five-year licences from April this year in line with the commencement of the radcom licensing computer system. It should be emphasised that these bills are intended to give apparatus licensees a choice, and give them flexibility in the way that they obtain their licences. They do not relate at all to the restructuring of the apparatus licence regime fee structure which has caused some concern amongst sections of the community.

As the chairman of the caucus committee on transport and communications I have received representations expressing concern about some aspects of the SMA's draft proposal for the change to the fee structure. With a number of other government members--and also, I understand, some members of the opposition--I have made approaches to the government to have the proposed fee schedule re-examined. Rather than the mean spirited way in which the member for Goldstein addressed this, I would like to commend the Spectrum Management Agency and the parliamentary secretary, because I am pleased to see that the SMA has further considered the level of fees to be applied to amateurs in the light of the public benefit that amateurs provide to the community.

A lower overall fee is now proposed by the SMA in view of the training and the experience in communications technology that amateurs provide to young people, and the role that amateurs provide in maintaining communication links in times of emergency. The SMA has quite rightly decided to reduce the tax component of the licence fee to the minimum level. This will reduce the fee from the proposed $71 to $51 per annum. The fee would be applied to all amateur licences. While $51 represents a small increase on fees paid for many years by amateurs, the new fee is based on the administration and maintenance services provided to this group by the SMA and includes the cost of issuing the licences, managing interference to their services,

issuing and registering call signs, accrediting examinations, and representing amateurs' interests in the international negotiations that the government carries on from time to time. It also represents a reduction of $20 from the draft fee which was proposed prior to the most recent round of consultations.

While there are social benefits of amateur radio, the fee set at $51 represents more than fair value for their access to and ongoing use of large amounts of radio frequency spectrum. The important thing is that this reduction in the fee has not been shifted onto others, because the change in the level of amateur fees will not be offset by an increase in the fees paid by other radiocommunications licensees.

I think the parliamentary secretary and the SMA should be commended for taking into account the work that amateurs do, both in times of national emergencies and in providing a very useful network that the community as a whole can take advantage of. People might recall that, during the bushfires in Sydney last year, people in the amateur radio area were involved in helping the State Emergency Service people. I think it was proper and reasonable for the government to take cognisance of the representations that were made, and it was proper and reasonable for the SMA to reflect that element in the fees that it charged.

The changes to the fees for amateur radio operators are part of the broader change to apparatus licences. The fee structure proposal is just one of the results of the inquiry that the SMA conducted for all users of the radio frequency spectrum, not just amateur radio users. The government's objective is to establish an efficient and equitable means of managing this vital national resource. It is a resource that all Australians ought to share in, through the licensing of the spectrum. The changes to apparatus licences are designed to reduce the number of categories of licences, and to provide for a more equitable distribution of the charges that are already made for the use of the spectrum.

The proposals put forward by the Spectrum Management Agency suggest fees based on a combination of the costs of administration and the value of the part of the spectrum being used. This method of charging is in line with the recommendations of the House of Representatives Standing Committee on Transport, Communications and Infrastructure, in which both the government and the opposition participated.

Up until now, as honourable members would know, fees and categories of licensed radio communication equipment have developed in an ad hoc fashion, over time, with little relationship between the fees charged for the spectrum used and the value of that spectrum. The cost to the Commonwealth of the administration and use of the public resource of the radio frequency spectrum should be reflected clearly in the pricing structure. That was one of the key findings of the public inquiry.

Using this method, fees for some categories may rise, while some fees will fall. However, it should be stressed that no overall variation in revenue is being proposed. Fee concessions will be available to non-profit voluntary apparatus licensees who are primarily providing safety or human life services, such as rural firefighting and sea rescue. In broad terms, local governments and state governments could expect to benefit from the restructuring of the fees. Small businesses, such as taxi services and paging services, are also likely to see fee reductions.

The government is fully aware of the concern--a concern, I might add, which has been preyed on by some opposition members, such as Senator Alston--that the proposed restructuring might result in higher fees being charged for amateur operators. They will be higher, but they will not be as high as was proposed, for the reasons that I outlined before.

It is unfortunate that some people have been misleading the public by comparing the suggested fees for amateurs with the fees for CB radio operators, who are now covered by a class licence. It is a very unfair proposition, which is being put forward by some people in the community, to say that CB operators will have a very low one-off fee but amateur radio operators will have a higher fee.

It should be made clear that CB and amateur operators are utilising quite different services,which both the government and international organisations provide. The CB users occupy very limited amounts of the spectrum, and they do not require any sort of frequency coordination.

They can cut across each other and no-one can complain. There is no responsibility carried by the Spectrum Management Agency for interference investigation within the two bands subject to CB licences. The Spectrum Management Agency's activities with regard to CB licences are confined to resolving interference by CB operators to other services, and investigating complaints of abusive or offensive language.

On the other hand, amateur licensees generally occupy a part of the radio frequency spectrum that is highly sought after by alternative users. In Australia, they have access to 44 blocks of spectrum in 23 different bands. That is well above that available in most other countries, and very dramatically different from the amount of spectrum available to CB operators.

Amateurs receive other services from the SMA, such as regular consultations with the Wireless Institute on variations and additions to spectrum availability. The SMA also represents amateurs' interests at international councils. If amateur operators were required to negotiate on their own behalf, they would have to bear a very heavy expense, and it would certainly cost a lot more than the extra $20 by which the licence fee has been increased.

Amateur operators should remember that the SMA recently negotiated international licensing requirements on behalf of Australian amateur operators at no additional direct cost to them, other than the increase in their licence fee. The SMA also arranges and accredits examinations conducted by the Wireless Institute and provides comprehensive interference investigation for operators. That is an entirely different level of service from that provided to the abble on the two CB bands.

As I said earlier, amateur licensees sometimes assist in emergencies and provide their service as a public benefit. The government has recognised that by reducing some of the costs to amateur operators. However, there are many other radiocommunications users who also provide these services in emergencies, while continuing to pay very significant fees.

However, the amendments today will facilitate a degree of flexibility in the radiocommunications licensing area that was not there before. That will be good for small business operators, it will be good for state and local authorities, and the reduction in fees will be good for amateur radio operators. I commend the bill to the House and, in doing so, commend the parliamentary secretary for his responsiveness to calls from members on this side of the House and others for a sympathetic response to the plight of amateur operators.

Many amateur operators are retired people. Others are disabled people who have taken this on as a way of communicating with the rest of the world, while housebound by their disability. Thus the government has helped business, local authorities and the amateur operators who put a lot of hard work in for the community.

AMENDMENT BILL 1994
Cognate bills:

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX)
AMENDMENT BILL 1994

RADIOCOMMUNICATIONS TAXES COLLECTION
AMENDMENT BILL 1994
Second Reading

Mr PROSSER (Forrest) (1.48 p.m.)--As specified by the Parliamentary Secretary to the Treasurer (Mr Elliott) in his second reading speech, the main purpose of these amendments is to assist the implementation of a new apparatus licensing system, which has resulted from a public inquiry by the Spectrum Management Agency. It is important that, prior to making changes to the scheme that has governed radiocommunications in this country, we consider very carefully the

role played by amateur radio operators in the industry and, more importantly, in the wider community, and how this bill may impact on them.

Some 20,000 amateur radio operators in Australia provide a free community service,particularly in time of national disaster and emergency. After Cyclone Tracy, all communications with Darwin were provided by amateur radio networks. The Wireless Institute's Civil Emergency Network, which is provided by amateur operators, is used during bushfires, floods and other disasters in New South Wales.

The United States of America and many other countries recognise the value of amateur radio operators by issuing free licences, while Australian operators must pay one of the highest fees in the world. The Spectrum Management Agency planned to impose a tax on the radio spectrum used by amateurs by more than doubling the fee charged from $35 to $71. I am pleased to hear that the government has now backed away from that, and the fee is now to increase to $51.

The argument used by the SMA was that amateurs should be taxed according to the amount of spectrum they use. That argument does not hold water. The spectrum is fixed by international treaty, and the SMA has little say over the matter. It could not reallocate most of the amateur frequencies to commercial interests even if it wanted to.

My understanding, after taking the time to talk to amateur operators in my electorate, is that the world is divided basically into three broad divisions for the purpose of management of the amateur radio spectrum as agreed by international treaty. It is in the Oceania division that Australia sits for the purpose of management. And it is management that we are talking about here today. What has been introduced is a new scheme of management for the spectrum, a scheme of fees categorised by either a spectrum maintenance charge or a spectrum access tax.

The interesting point to note here is that the spectrum access tax is more of a spectrum denial fee. Primary spectrum users deny spectrum to other users and thus the charge of this fee or tax. This is okay if there is an alternative user for the spectrum, but in the spectrum allocated to amateur users the Spectrum Management Agency has no say on its use other than for amateur radio. The use of the spectrum for amateur radio is fixed by international treaty and thus is binding on Australia. I could, of course, go on to make comment on this government's almost blind adherence to every treaty that has ever come into existence, but I will refrain from that.

What I do find hard to swallow is the tale that the government should be trying to tax the use of amateur spectrum on the basis of exclusion when it has no mandate or authority in any manner to allow any use for that particular spectrum other than amateur use. As to these spectrums, many are fixed as exclusively amateur worldwide and

are of no commercial value to Canberra. Most of the others are already assigned to commercial or government primary users and to amateurs as secondary. Once again, the SMA cannot vary the amateur usage because that is covered by international treaty.

On another point, there are some 300,000 CB radio operators in Australia. They do not have to pass an examination, yet the amateur radio operators have to pass three exams at a 70 per cent pass level in order to gain a certificate. Some CB operators use their stations and repeaters for business, while amateur radio operators are forbidden to do so by law. The licence fee for CB operators has been abolished. The question has to be asked: why should amateur radio operators have to pay when CB users do not?

The distinct role and position of the amateur radio operator as a competent professional and a controlled operator is very clear. I recently visited amateur radio operators VK6 VX, VK6 VHI and VK6 XX in Albany in Western Australia and I was impressed with the use that is now being made of computers linked into amateur radio networks, in particular the ability of these amateurs to operate programs which not only show the track of satellites, including the one that I observed of a Russian space station passing over Albany at the time, but also are able to communicate with those stations. Both NASA and the Russian authorities have recognised the value of the amateur radio network by incorporating those links into the space station and shuttle programs.

On a more important note, I was able to see the message traffic that was generated out of the Kobe earthquake disaster, straight after that terrible earthquake struck that city. The residents of that city would no doubt have been thankful that the amateur radio network was in place to pass their cries for help worldwide.

We have a situation under this scheme where one of the ongoing effects will be to double the user fee for our amateur radio operators. Coming from an electorate of over 28,000 square kilometres, I recognise the true value of the amateur radiocommunication network. The government should reconsider its position on amateur radio operators and recognise the immense value of their work in the community and not impose this increase to this particular area. Indeed, as I mentioned, the government really should look at the huge value of the amateur radio operators to the community.

RADIOCOMMUNICATIONS (TRANSMITTER LICENCE TAX)
AMENDMENT BILL 1994
Cognate bills:

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX)
AMENDMENT BILL 1994

RADIOCOMMUNICATIONS TAXES COLLECTION
AMENDMENT BILL 1994
Second Reading

Mr FORREST (Mallee) (1.55 p.m.)--Here we have another example of this government's propensity to tax the community of Australia with absolutely no mandate whatsoever. We have these bills before us today, with titles which all include the word `taxes': the Radiocommunications Taxes Collection Amendment Bill, the Radiocommunications (Transmitter Licence Tax) Amendment Bill, and the Radiocommunications (Receiver Licence Tax) Amendment Bill.

It seems that this government has an unbelievable preoccupation with tax, trying to satisfy an insatiable thirst for revenue. There is a suggestion that everything that moves, and sometimes even everything that dies, should be taxed; and not only taxed here, but taxed at a whole variety of different points. I have spent 20 months in this parliament, Mr Deputy Speaker; and given what I remember of the March 1993 election, I would say that if this government has any mandate whatsoever it is not to increase taxes. But here we have an other example of its preoccupation. The government is so preoccupied with taxing that it wants to tax hobbies.

I have noted that the government has responded to what has been a fairly massive degree of representation, and I have noted that most members have received letters from persons within their own electorates who are amateur and ham radio operators. I do not think the government can take too much credit for reducing a proposed increase in its tax on amateur radio operators. All it has done is to reduce it by $20. It is still an increase in a tax on a hobby.

I can appreciate that there are other elements, and that the purpose of this legislation is to enable some flexibility in the payment of annual licence instalments. There may be some merit in that, and to that extent the coalition is not opposing these bills. However, my namesake, the honourable member for Forrest (Mr Prosser) has just appealed to the government to reconsider its intent to tax a group of Australians who make a contribution to our community. I would like to take the opportunity later to demonstrate that it is a valuable contribution. The government ought to consider what it might cost a government to provide the sorts of resources in terms of public safety and contribution to public events that are provided by ham and amateur radio operators.

Indeed, when it is considered that the annual revenue from licence renewals is something around $100 million per year, it is clear that it is already a significant source of revenue for the government, so I was particularly annoyed to see the Spectrum Management Agency proposing initially to double licence fees. I was at least somewhat relieved to hear the Parliamentary Secretary to the Treasurer (Mr

Elliott), when he introduced these bills, say that there has been some amendment to that.

The Spectrum Management Agency currently supervises about 250,000 radio licences. The fees for these have in the past varied from $18 a year for smaller marine licences and for CB and VHF operators to some huge amounts for multiple public mobile telecommunication services, fees for which often amount to several hundreds of dollars--even $700,000 per year on big installations.

I want to address the assistance that is provided by amateur radio operators, particularly in emergency situations. The support they provide to community organisations has been a consistent part of their ethos, and has been promoted by radio operators as part of that ethos for decades.

One of the other valuable contributions--I have a notable number of international radio operators in my own electorate--is the contribution they make to the worldwide promotion of goodwill because of their community and international communications. I have been informed by some of them that, when they have made comments about this increase to some of their international corresponders via the radio spectrum, other amateur operators in other countries are completely surprised to find that this country wants to introduce such a dramatic increase in fees. I think it ought to be labelled as a cynical revenue raising exercise.

I note that the previous speaker, the member for Watson (Mr Leo McLeay), called us cynical and mean spirited in the contributions that we have already made to this debate. The only mean spirited people that the community of Australia ought to be alerted to are those who occupy the government benches. It is unbelievably mean spirited of them to tax community and amateur operators out there who, as I have said, provide such a valuable contribution to this community.

The Radiocommunications Act 1992 made provision for people such as community amateur radio operators because it included `adequate provision for use by public or community services'. The act also requires `a responsive and flexible approach to meeting the needs of users'. The substantial increase in licence fees causes me great concern because of its inconsistency with existing provisions of the act.

From that I formed my own conclusion about what a cynical tax raising exercise this is turning out to be. None of my corresponders are encouraged by the government's recent announcements that the amount of the increase is to be reduced. They still maintain that, as amateur radio operators who provide a valuable communication facility to train personnel in what is an important area of communications, their role should be recognised.

As the member for Forrest said, I would urge this government to reconsider that particular part of the legislation because it is completely unfair. I see no justification whatsoever in taxing this particular narrow group of people who are confined by the fact that they are a captive audience because they have fixed locations which are easy to find and, therefore, easily sourced for taxation revenue increases.

Mr Peter Milne of Mildura, whose call sign is VK3PM, was one of my corresponders. I would like to quote parts of his letter to me in order to make his complaint part of the public record. He introduces his letter by referring to the proposed changes by the Spectrum Management Agency. He then says:

``Amateur radio is a recreational and educational "hobby" pursued by a wide range of people in our community. Amateur Radio is of immense benefit to the community.There are many instances where it has played a crucial and important part in providing emergency communications where civil and military systems have been unable to perform.''

He then provides examples of communications with respect to Cyclone Tracy in Darwin, recent bushfires in many of our states and past earthquakes in New South Wales. He goes on:

``It is a hobby that produces effective self training in technology. Many young people graduate to a career in electronics having had their ambitions developed through such an interest. The Scouts and Guides movements of Australia have many stations used in training of their youth. There is immense social value in a recreational hobby particularly suited to handicapped persons and also senior citizens.''

I continue to quote from Mr Milne's letter. He states:

``The Amateur Radio Service provides a ready pool of trained personnel available for service to the country . . .''

I would emphasise just how important the contribution of amateur radio operators is in rural areas, especially in an area like mine which is 70,000 square kilometres, one-quarter of the north-west of Victoria. The letter continues:

``Australian Amateur radio operators are among the world leaders in development of new technology and have recently made significant contributions to research in areas such as satellite technology and radio propagation studies. The hobby provides a valuable service in development of international relations. There are many more positive aspects that could be mentioned.''

He sought my support to have the proposed fee increases rescinded. He has that support, and he has the support of all of us on this side of the House. It is quite clear that in terms of amateur radio the government ought to have made more appropriate allowances.

Mr Milne's letter refers to some of the community benefits of amateur radio, but there are many others which are impossible to measure in dollar terms. You could not measure in dollar terms the benefit of amateur community radio. Therefore, I find it unbelievable that the government would let its insatiable thirst for revenue override such benefits and that it would propose a cost to services when it has not even considered what it would cost the government to provide such services.

I would like to draw attention to a particular, huge community event that occurs in my electorate. It is the Murray River marathon. The marathon starts as far upstream the Murray River as Albury and ends in Swan Hill, which is the city in which I reside. The role that amateur radio and the communication networks play that ensures the community and public safety of that event is just one example of which I am already aware of the benefit of amateur radio operators.

If we get back to the more particular focus of this legislation, like many other pieces of legislation brought to this House, it is all about tax--for goodness sake, tax it; tax it if it moves!

Fuel tax is an unbelievable impost that affects everything we do, particularly those in rural Australia. I am reminded of the government's obfuscation during its last election campaign when it had those TV advertisements with cash registers popping up at the sight of a tube of toothpaste showing an extra 15 per cent tax. That was a complete obfuscation of the truth, and it completely overlooked the fact that the government's last policy was to remove seven taxes and have only one fair and balanced tax. So, if this government has any mandate, it is not to increase taxes.

Tax it if it dies! Every year in pre-budget deliberations, we hear about death duties and inheritance tax. Tax it if it burns! We recently heard intonations from the government that it wanted to introduce a carbon tax. Thankfully that was knocked on the head. It would have imposed more on-costs to business in this country. Tax it if you sell it--wholesale sales tax! Tax it again if you buy it! The dramatic increases we have seen in the last 20-odd months in wholesale sales tax completely surpass anything we had originally proposed or intended with the goods and services tax. Tax it if it gains value--a capital gains tax! Now we hear suggestions that if it sleeps it will be taxed--a bed tax. What an imposition that is going to be on the valuable tourist industry of this nation.

When it comes to amateur radio, I think it is outrageous and completely unfair. The government ought to reconsider. It has given some reconsideration, but I think it ought not increase at all this particular component of amateur radio.

My understanding of taxation is that tax ought to be levied on a profit or a likely profit. I remind the government that licence by regulation would prohibit amateur radio operators having a profit. So how could taxing it be right? Tax on the use of radio spectrum, which

is already set aside by international convention for amateur radio, does not occur in any other country. So it is completely unfair, unjust and flies in the face of practice in other countries. From what I hear, we are already something of a laughing stock in the international communities in which amateur radio communicates. No other country in the world levies such a tax on their amateur radio operators.

Is the government really aware of the size of the group it wants to antagonise by the introduction of this tax and the powerful communication facility they have available to communicate a message about the lack of mandate this government has to tax them? Currently, there are about 18,000 amateur radio operators and, internationally, their numbers are measured in millions--a huge communication network. They have powerful radiocommunications at their disposal--they talk a lot. As I said, already international reaction is not favourable on this government's intent to tax them. This particular aspect of this legislation has been grossly ill-considered.

Again, because amateur radio operators are a registered minority, they are an easy target. I refer again to Mr Milne's letter where he asks for my support to see what I can do about ensuring that these increases are not imposed. In his letter he says:

``I require your support towards action to have the proposed fees rescinded and another more suitable approach taken. We would consider it an excellent result if we were granted licences free of charges as is the case in the United States where the community, education and recreational value of Amateur Radio is highly valued.''

I assure Mr Milne that I do oppose this unjust form of tax. The government ought not hide behind its statement that this legislation is all about a positive gesture of allowing greater flexibility in the payment of radio licence charges. I recognise and support professional and large radio licence operators having their fees reduced by taking up payment options. My particular objection is that I consider amateur radio operators an important group of Australians who have a function to fulfil.

The package was developed as a result of public inquiry which was initiated as far back as December 1993 at the direction of the government. This package aims to respond to industry requirements resulting from that inquiry into that more flexible arrangement, so I support that aspect. The new payment options introduced by the package coincide with a whole new licensing computing system and will therefore provide a much clearer and easier administration. At least that part seems to meet some of the aspirations of the industry. But nowhere in the legislation or in reading the background information do I find any justification for the `punitive' attitudes towards amateur radio operators. I do not think they ought be used to subsidise some of the gains that might be achieved for other licensed operators.

I remind the government that we will take every opportunity to remind them that it has no mandate to increase taxes on Australians. We bitterly oppose these arrangements and certainly take offence at a bill like this which seeks to call increases in tax revenue through licence fees `revenue gaining exercises'. They are simply taxes and they cost Australians, and we are opposed to that.

RADIOCOMMUNICATIONS (TRANSMITTER LICENCE
TAX)
AMENDMENT BILL 1994
Cognate bills:

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX)
AMENDMENT BILL 1994

RADIOCOMMUNICATIONS TAXES COLLECTION
AMENDMENT BILL 1994
Second Reading

Ms HENZELL (Capricornia) (2.14 p.m.)--Mr Deputy Speaker, I am pleased to contribute to this debate on the Radiocommunications (Transmitter Licence Tax) Amendment Bill 1994 and cognate bills. I was very disappointed to hear the comments of the member for Mallee (Mr Forrest) who, I know, is concerned about all issues that may impact on his constituents.

I believe he is not presenting the full facts. I dare say that the criticism in relation to this bill goes back to 18 January when the shadow minister for communications and the arts, Senator Alston, took up this issue in a press release. He said:

``It is difficult to avoid the conclusion that amateur operators have the misfortune to be a disciplined, individually licensed service and, therefore, an easy target for revenue raising . . .''

And it goes on and on. While we all recognise the contribution made to the community by amateur radio hams, the opposition spokesperson failed to indicate that he had any idea of what was in the report of the Spectrum Management Agency. He said that it indicated that there had been no consultation. The facts are at variance with that statement. Indeed, if the member for Mallee had cared to look at the information, he would have been able to clarify the situation.

On 8 December 1993 the then communications minister, the present Minister for Resources (Mr Beddall), instituted the inquiry. Throughout January and February 1994, the SMA distributed over 4,000 copies of the discussion paper to interested parties, advertised widely and then proceeded to conduct 14 public seminars attended by over 900 people. It

received 422 submissions and reported its findings to the then Minister for Communications and the Arts, the present Minister for Primary Industries and Energy (Senator Collins), at the end of May 1994.

At every stage of the proceedings there was close consultation with the Institute of Wireless Operators. Indeed, it was very involved when this issue was being looked at. There is hardly a case for saying that there has been no consultation. There has actually been widespread consultation.

The general line being presented is that the whole basis of the legislation we are now debating--the report of the Spectrum Management Agency, titled Inquiry into the apparatus licence system: a new outlook--came about because we have a down on amateur radio operators in this country. In fact, as is quite clear from the report, the reforms go to the whole management of radio communications.

Yesterday, when the Parliamentary Secretary to the Minister for Communications and the Arts (Mr Elliott) introduced these bills, he made it clear that the licence for amateurs would be a flat rate of $51; the original proposal for $71 had been just that, only a proposal. The reforms are widespread and very pertinent to the handling of this area of operation.

The report includes a number of recommendations. In relation to citizens band licences, there was a recommendation, adopted in October 1994, for class licences. Other recommendations include: the simplification of apparatus licence categories; arrangement for licence terms up to five years with very flexible payment arrangements--one of the key factors in the bills we are debating; the possibility of transferring apparatus licences between parties; and, very importantly, licence fee concessions for volunteer non- profit emergency organisations, such as rural firefighters, search and rescue organisations, coastguards, surf lifesavers and ambulance services in remote areas. Then there was a definite decision to charge for a range of services provided by the Spectrum Management Agency. Those charges are to be introduced on an equitable and transparent basis so that people can understand what the charges are for and why they are paying them.

What irks me is that the opposition parties continually bleat about government charges and cutting government expenditure. But the minute there is a specific option for user pays principles, for making sure that services are provided and that the government is accountable, they are bleating about how shocking it is that we are raising another tax.

I believe this is very unfair. I am sure all other honourable members have made representations on behalf of amateur radio operators. I take the time and trouble to find out the facts. Unfortunately, it seems that some of my colleagues in the opposition--and particularly the shadow minister--have decided that it is easier to score a cheap political point than to go and make a proper investigation. The shadow

minister is the person who would like to be running this area of the government. This is a wide ranging report which has a number of very positive reforms for the use of the spectrum. All the shadow minister can talk about is this one small point.

No-one in this country wants to pay taxes but everybody wants services. Local amateur radio operators in my area felt this was an impost. I am sure they will be delighted with the very sensible decision made by the government. It is not about not charging them. Our amateur radio operators have done all the good things that my colleague the honourable member for Mallee suggested. I have no argument with all those good things.

While the amateurs were paying limited fees for the services they received, other essential services were paying much greater charges. One of the key benefits in these reforms is that a lot of these essential services will have a decrease in charges. That is a very sensible rationalisation. I refer to the editorial by Jim Rowe in the March 1995 edition of Electronics Australia. Mr Rowe indicated that he had lots of representations from amateur radio operators. He has taken a very responsible position. He says:

``Amateur licence fees haven't risen for about 10 years, even though the cost of most other goods and services have risen quite significantly in that time. Some sort of rise was probably inevitable.''

He goes on to say that there will be increasingly fierce competition for space in the electromagnetic spectrum. He says:

``In many ways this is a finite resource, and historically amateurs have accumulated quite a lot of spectrum `real estate'. In fact I understand that in Australia, amateurs are second only to the Department of Defence in terms of their total allocation of spectrum space.''

He goes on further:

``The SMA has sought to base them clearly on the real costs of issuing and renewing licences, and also on managing each licensee's activities--together with a `spectrum access cost' or tax, based on the perceived value of the spectrum segment(s) being used on an exclusive basis. On the whole this seems reasonable, and is in fact the kind of changes taking place in many other countries as well.''

This is rather interesting:

The problem for amateurs is that because quite a lot of spectrum is allocated to them, applying this rationale strictly `across the board' would result in amateur licence fees rising to well over $500 per year.

If we really wanted to put in place a user pays principle, that is the sort of charge that would be allocated because, as Jim Rowe says, a significant amount of spectrum is allocated to amateur operators.

The other issue that has to be taken into consideration is that, if you are going to get into this hobby, which has lots of positive spin-offs, including emergency availability when there is an accident or a major disaster--and I commend the comments of my colleague the member for Mallee in this matter--the equipment will cost you at least $2,000. It is a considerable investment for people who choose to become involved or interested in this area or hobby. Therefore, a charge of $51, or even $70, would not seem to me to be a major impost.

One of the concerns brought to me that I responded to was about what appeared to be a sudden jump. Jim Rowe--and I assume he knows a great deal more about this area than I do--finishes his article by saying:

It might well be prudent for amateurs to swallow hard and accept this fee rise, without much fuss. Attracting a lot of interest might cause renewed demands for some of that precious spectrum space, by potential users willing to pay a lot more for the privilege.

That has not really been taken into consideration by some of our operators, for very well-intentioned reasons, but it has also not been taken into consideration for what I would consider fairly cheap political reasons by some members of the opposition, particularly by the person who would like to be making the decisions in this area--Senator Alston.

If we look at the suggested reforms to licensing types, we see very clearly that this report has done a very good job. It has done a very good job because there has been, as I said before, this wide ranging consultation. There was a commitment that this consultation would continue in relation to a range of issues, including the cost to amateurs. Page 5 of the SMA discussion paper suggested that the licence types should be:

. workable in number;

. clear, simple and mutually exclusive;

. able to accommodate new developments in technology and service delivery;

. be consistent with SMA management functions, such as planning, applying licence conditions and setting fees; and

. be administered efficiently (for example, by automation).

Thus, as a general principle, there should be a minimal number of `broad purpose' licence types. This approach is consistent with the majority of submissions to the inquiry.

In fact, it came up with a grouping of 16 new transmitter licence types with three new receiver licence types which would be based on

definitions in the Australian spectrum plan. I just want to go through those briefly to indicate the breadth of areas we are talking about. The first area is aeronautical. The second area is aircraft. The third area is amateur, and within amateur are several subgroupings: unrestricted, limited, novice, intermediate, novice limited, amateur beacon and amateur repeater. They are allocated a proposed differing amount. The fourth area is broadcasting, which includes broadcast service and narrowband area service. The other areas are defence; earth; fixed; land mobile; maritime coast; maritime ship; multipoint distribution station, MDS; outpost; public telecommunications service; radiodetermination; scientific; and space.

We are talking here about a very important area, particularly with the increase in high tech and communications looking for areas of the frequency. I believe the amateurs continue to have a very fair operation. The sorts of licences we are intending to provide under this bill indicate that we are prepared to be very flexible about the way those payments are made--to make it much easier, for instance, for retired hams to be able to make those payments. I believe we have done a very good job here.

I want to further comment on the public or community service providers. One of the recommendations in the report on page 11 states:

The SMA considers that concessions should apply to volunteer, non profit, emergency organisations involved in rural fire fighting, search and rescue, coast guard and surf life saving activities (principally providing safety of human life services) and to individuals who support such organisations. Organisations involved in ambulance services in remote areas will also qualify for concessions.

The sorts of concerns that have been raised by a number of people, including the amateurs, have certainly been considered in this report. The government and the agency have responded to a range of calls from the community about the method of charging, which has been suggested is in line with recommendations of the House of Representatives Standing Committee on Transport, Communications and Infrastructure and the public inquiry process.

Some concerns were put to me about the fact that citizens band radio holders had been provided with a class licence. But, from information given to me, it is clear that the CB bands - although they appear to very numerous--occupy a relatively small part of the spectrum and do not require the sort of regulation or representation the SMA has made on behalf of the Wireless Institute of Australia in terms of the accreditation of their examinations and international representations.

Although it would appear to individual amateur radio operators on the ground that the Spectrum Management Agency does little for them, a great deal is done on behalf of this group of people--which is about 20,000 across the country. However, this means that about 30 per cent of licensees would experience fee increases--this is where the amateur

licence holders are found. Local government authorities, state governments and the emergency service organisations will benefit considerably, as will organisations such as taxi operators and paging services--those small businesses about which the opposition claims to be very concerned. Although I can understand the concerns of amateurs in terms of the CB network, the facts really speak for themselves.

I return now to the amount of spectrum that is available. Amateurs occupy a great deal of the spectrum--44 blocks in 23 different bands, which is well above what is generally available in other countries. So there are 20,000 amateurs with 179 times more spectrum than the estimated 800,000 CB operators. Each amateur uses significantly more power than CB users. As I said before, amateurs occupy more spectrum than most others, except the Department of Defence, which I think we would all agree would require a fair degree of spectrum.

The government, through its consultations, has certainly listened to the voice of a relatively small group, and that is the art of politics. The amateurs have lobbied their members, we have made representations and the government has decided to respond by making it a flat rate, which I believe is realistic and reasonable. I hope that all the amateurs will be very happy with that resolution.

We have not backed down or buckled under pressure, and we hear this nonsense ad infinitum and ad nauseam from the opposition. This has been a process of consultation for more than 12 months, and there have been further consultations. In my view, it is a good decision and I hope we will hear less from the opposition of this nonsense about another tax.

RADIOCOMMUNICATIONS (TRANSMITTER LICENCE
TAX)
AMENDMENT BILL 1994
Cognate bills:

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX)
AMENDMENT BILL 1994

RADIOCOMMUNICATIONS TAXES COLLECTION
AMENDMENT BILL 1994
Second Reading

Mrs MOYLAN (Pearce) (2.34 p.m.)--I am sure the coalition responds favourably to the member for Capricornia (Ms Henzell) saying that we are about fiscal responsibility in managing the financial affairs of the government. There is no question about that, but sometimes it gets back to a matter of priority. One of my early tasks as a member was to sit on the Public Accounts Committee. It was there that I began to see

some of the horrifying mism anagement that was occurring. I am sure that if the member for Capricornia discussed this matter with some of her colleagues they would find some very large savings in very many areas so they do not have to be mean spirited with a group of amateur people.

During 1994 a review of radiocommunications apparatus licensing was conducted by Spectrum Management Agency. One of the recommendations arising from that review was that a wider variety of payment options be made available, particularly to avoid the necessity for regular annual licence tax payments when the term of the licence exceeds one year. On the surface, it is a very commendable market driven recommendation. However, I wonder how many members of this House are aware of other activities of the Spectrum Management Agency that make the implication of a wider variety of tax payment options almost a necessity for many of Australia's 18,115 amateur radio licence holders. For these clients of the Spectrum Management Agency, the amendments contained in the radiocommunications bills are, unfortunately, timely. These individuals are faced with the spectre of a new tax on their access to the radio frequency spectrum.

Until yesterday, amateur radio licence holders were faced with a new tax of $30 per year - equal to 273 per cent of the annual reissue costs of $11 per year, or 94 per cent of the total administration charge of $32 per year, or 73 per cent of the total annual amateur licence fee of $41 per year. Yesterday the Parliamentary Secretary to the Treasurer, the honourable member for Parramatta (Mr Elliott), came into this House and subsequently, in yet another about-face by the government, announced more policy on the run. Amateur radio operators are now faced with a total annual fee of $51, a 38 per cent or $14 increase on the current $37 fee. This will be a 400 per cent increase on the 1980 fee, when amateur radio licence fees were $10 per annum.

Let us not be deceived by this cynical about-face by the government. Firstly, as I will outline later, this amazing $20 reduction merely removes a blatant act of discrimination against amateur radio operators. On behalf of my constituents, I am very pleased that the government has bowed to the pressure. I have had very many representations from my electorate on this issue. It is good to see the public getting involved and applying pressure to make appropriate changes. Most importantly, the government's real agenda in this case has been exposed: that is, to tax the amateur radio industry out of existence. This industry will now be left to wonder when the next act of government taxing will focus on its members.

It is little wonder that the SMA has implemented some innovative payment schedules to accommodate the payment of the tax on the issue of a receiver licence. Item 2 of the schedule of the Radiocommunications (Receiver Licence Tax) Amendment Bill 1994 inserts proposed new section 6, which gives applicants for receiver licences issued for periods of more than 12 months different options in relation to the payment of the

tax. This is all well and good, but it does not address the concerns of those individuals who hold amateur radio licences. They are in many instances young or elderly members of the community. They may be retired war veterans or simply individuals participating in a very worthwhile hobby. Perhaps they belong to the many hundreds of scout and guide groups around Australia. I know of at least 85 scout and guide groups that are registered amateur radio operators.

Perhaps members opposite would like to hear of the concerns of the Girl Guides Association in Western Australia, which wrote to me on 27 February:

Dear Judi,

The Girl Guides Association in Western Australia was most perturbed to hear of the forthcoming increases in fees for amateur radio station licences.

The guides and scout associations both have stations which are used for the training of younger members. Jamboree of the Air could not function without the assistance of a large pool of amateur radio operators.

A peculiar thing about this whole increase is that over Australia the increase in revenue to the Spectrum Management Agency would only amount to $495,000 per annum.

The Spectrum Management Agency have announced that CB operators would have their licence fees completely waived. This means that Spectrum Management Agency has given up a revenue of around $3.6 million per annum.

As CB operators can use their radio equipment for financial gain as against the amateur's purpose of training and personal intercommunications and, in the case of the guides and scouts, increasing friendship between them and member in other states and countries, it is odd to say the least at the reasoning behind these two decisions.

We request your support towards action to have the proposed fees rescinded.

That group has my support on that, despite the fact that I am concerned about decreasing benefits for the small business community. I do not think the way to do it is to penalise those in our community who not only operate radios as a hobby but also give back a tremendous community service.

On the government's way to the new tax market, a funny thing has happened. The government has decided that the commercial interests associated with CB operators, and the millions of dollars forgone in licence revenue from that market, are somehow made up for by the easy pickings of the amateur radio sector. This is the sort of inequity the community has come to expect from this government. For

amateur radio operators, the SMA's new tax payment options contained in the bill are not the only issues foremost in their mind. They are really concerned about whether or not they will be able to continue to afford to hold amateur radio licences at all.

In its publication entitled Inquiry into the Apparatus Licence System--A New Outlook, the Spectrum Management Agency lists its annual apparatus licence fees. Of the 15 categories listed, the SMA states:

The minimum spectrum access tax is proposed to be $10. All except three of the non assigned licence sub types will attract the minimum tax.

It should come as no surprise to honourable members that the three licences that were to attract a higher fee were all amateur radio licences. The fees for amateur radio licences were to be 200 per cent higher--$30. What possible justification was given? None. Of all the categories listed only one has a higher total fee than amateur radio. The remainder are at least 37 per cent lower, and some of them are as much as 66 per cent lower. What responsible authority would I mpose such an inequity on a community good? Better still, what sort of government would allow this to be imposed on such a valuable community resource?

As indicated yesterday, the government has been caught out. It has been exposed. The SMA's lame duck excuse that this last minute about-face is the result of further consultation and consideration is simply perpetuating the myth that the SMA is concerned about amateur radio. Its actions clearly reveal otherwise. This is the action of a mean- spirited government that is surreptitiously eroding the quality of life for many Australians. In fact, I think it is called robbing Peter, who is the community, to pay for the excesses of Paul, who is the part-time Prime Minister.

The SMA's 273 per cent tax would have raised approximately $550,000 from a community sector that contributes hundreds of hours every year--worth hundreds of thousands of dollars--to a voluntary and free community service. The great bulk of this service just happens to be provided during times of crisis in the community and at a time when other traditional and commercial lines of communication are often not functioning. In many other countries this service is not taxed at all. In the United States, Congress has recognised the importance of amateur radio and, consequently, no licences and no taxes are paid by amateur radio operators. But this is not so in Australia. This government's concept of the clever country is to impose a 273 per cent tax on the activities of our scouts, our guides and committed radio enthusiasts, who have repeatedly demonstrated excellence and commitment to the use and development of amateur radio in Australia and overseas.

It must also be emphasised that the amateur radio community operates in true amateur spirit. Unlike other users of the radio frequency spectrum, amateur radio licensees are prohibited from gaining any pecuniary interest from their activities. This government is using

amateur radio. Perhaps it could be suggested that the government is blatantly exploiting the goodwill and the commitment of this sector of the community and, in the process, is determined to squeeze every bit of financial gain possible from it.

A very clear comparison of the government's commitment to the community is evident when one looks at the discriminatory way amateur radio users are treated as compared with the way users of citizens band frequencies are treated. CB users have had their licence requirements abolished. That is a windfall of approximately $6.5 million to users of the radio frequency spectrum. It must be noted that the CB users are often commercial operators who do gain financially from their investments. As I said before, as the shadow minister for small business, I am the last one who wants to see any additional costs imposed, but I believe this particular measure is inequitable.

The bills being debated today provide the SMA with the power to determine the amount of tax in respect of the issue of receiver and transmitter licences. I believe it would be automatically assumed that with this power would come responsibility. From the activities of the SMA it not only appears that it does have difficulty in developing equitable taxing and licensing regimes but it also appears, from the information provided by industry participants, that certain senior SMA staff have a great deal of difficulty clearly articulating the SMA's actions, intentions and services to a very well-informed community sector.

Concern has been expressed that a misinformation campaign has been embarked upon to cloud the waters of change. This is evident in a transcript from an interview with a senior executive of SMA, who it is alleged provided the following commentary on radio station 5CK at Port Pirie in South Australia on 21 February 1995:

What we do is to maintain the same level of revenue and to redistribute that revenue based on a fair and equitable basis. It is true that much of the amateur spectrum is decided by International Treaty, but that's not to say that Governments can't and in fact shouldn't charge. Most governments around the world do, although there are some that don't.

The Wireless Institute of Australia responded to that statement as follows:

``We know of no other government that makes a charge to amateur radio operators for access to the spectrum. Some do charge a fee for a station licence whilst in some countries no charge is made at all. Australia would be creating a world precedent by applying a Spectrum Access Tax. I believe that (Mr Grant) the SMA executive is being at the least, deliberately misleading here and could possibly be accused of telling a complete lie.''

Unfortunately, that was not the only extract from that interview that drew outrage from the amateur radio community. I refer to the fact that

these bills provide the SMA with the power to determine the amount of tax in respect of the issue of a receiver licence. The SMA has certainly learnt very quickly how to apply that power.

At a recent presentation the SMA identified its revenue estimates for 1995-96. Depending on your point of view it is either interesting or disturbing information. From the point of view of amateur radio operators it is a disgusting example of blatant tax grab. Based on the following figures, I would have to agree. The SMA's revenue forecasts are: 17 per cent from spectrum maintenance charge; three per cent from licence renewal charges; 14 per cent from licence issue charges; two per cent from consultancies; and-- wait for it--64 per cent or $60.6 million from spectrum access tax.

The figures indicate beyond any doubt that the primary activity of the SMA is as a tax gathering front for the government. Unfortunately the amateur radio community is deemed to be a soft touch. The SMA, in its publication titled Inquiry into the apparatus licence system--a new outlook, states:

``As noted earlier, all fees are in fact taxes levied under the Tax Acts. The basis for imposing a spectrum access tax on users, above the costs of spectrum management is that the spectrum is a valuable resource and the community is entitled to a monetary return--or a rent--for its private use. A direct monetary return, via government, is intended to compensate the community for the user benefiting from access to spectrum. It is also a rationing device.''

In respect of amateur radio, the SMA should practice what it preaches when it refers to valuable resource. In February 1995, the SMA stated:

``The SMA appreciates the good work done by the amateur radio enthusiasts in providing services at various times to assist the community. It is also aware of the benefits in encouraging young people to learn about radio.''

The SMA should remember those sentiments and then reconsider its bizarre treatment of this very valuable community resource. The SMA should also listen to others in the community who have commented on the value of the amateur radio network. I would recommend that those on the other side of the House also take note--wherever they are today. In October 1992, the honourable member for the Northern Territory (Mr Snowdon), addressed the SEANET convention in Darwin. He said:

``The work carried out by amateurs when Darwin was ravaged by a cyclone on Christmas Day in 1974 was outstanding.

``There was virtually a total loss of communications with the outside world.

``When telecommunication links were cut, nothing was heard from Darwin for a number of hours until the lone voice of a Darwin amateur made contact with other amateur operators.''

Amateur radio operators must surely feel that they are now a lone voice in the ears of this government and its cohort in this tax exercise, the SMA.

I ask the member for the Northern Territory, now that the chips are down for amateur radio people, where does his support lie? He should have a caucus with his colleagues, the member for Jagajaga (Mr Staples), the member for Bonython (Mr Martyn Evans), the member for Makin (Mr Duncan) and the member for Dickson (Mr Lavarch). I am told they have all offered support to the amateur radio industry. It would appear to be very hollow and ineffectual support if they are not prepared to stand up and publicly be counted on this issue.

One final commendation that sums up the contribution and community value of the amateur radio community is provided by the Acting Chief Commissioner Robert Falconer of the Victoria Police. With respect to the 1993 Victorian floods he said:

``The effort by the Wireless Institute Civil Emergency Network volunteers and the fact that they are volunteers who provide their own time and resources is to be highly commended as in such circumstances it would have been extremely difficult to complete the registration of evacuees by any other method.''

These accolades are given to a valuable community resource. That this government and the SMA seek to tax it out of existence is nothing short of a national disgrace. Like my colleagues, I have had numerous constituents express their anger and concern at the outrageous tax imposts being thrust on amateur radio communities. The views and spirit of the amateur radio community are best summed up by one of my constituents who said:

``We are proud of our history and our achievement but realise that keeping ourselves very much to ourselves for so long we're in danger of becoming just another endangered species!''

That communication was received from Mr Harry Atkinson who, in his own words, is blind, aged 81 years, and still kicking--a great Australian. The coalition supports these amendments. I endorse the comments made by my colleague. I am pleased to see that the government has had a change of heart on this matter in the last few days. No doubt that has been brought about by enormous public pressure and pressure by many of my colleagues in relation to this matter. I do condemn the actions and attitudes of this government and the SMA for their joint attack on the Australian amateur radio community.

RADIOCOMMUNICATIONS (RECEIVER LICENCE TAX)
AMENDMENT BILL 1994

RADIOCOMMUNICATIONS TAXES COLLECTION
AMENDMENT BILL 1994
Second Reading

Mr ADAMS (Lyons) (2.52 p.m.)--One would think that amateur radio was being taken out of existence when one listens to the opposition in this debate on the radiocommunications bills. It is not. In these days of instant communications, there are a growing number of uses of the radio frequency spectrum and a large number of users. It has been of interest to me to see how quickly mobile phones have been adopted as the norm in telephone communications. I see kids on roller blades chatting away on mobiles, pretend or otherwise. Suddenly, these things are all part of our life.

We Australians seem to love technology and we take up the use of it faster than just about any other nation. How we managed without the facsimile machine is anybody's guess. I cannot imagine life now without a computer. Television was introduced in my lifetime. I remember the old Astor set being carried into my house.

Radio communications is more than an industry in its own right; it forms part of another complex communications system and provides an essential transmission medium for telecommunications carriers and broadcasters. Radio communications systems also provide the invisible sinews for other industrial sectors including transport, defence, emergency services, mining, agricultural, commerce, manufacturing and maintenance. That does not mention the domestic or hobby users who also make such varied use of radio airways.

Then there are radio navigation and radio location uses for the guidance of ships and aircraft on radio beams and radar and broadcasting uses such as television and sound radio. These are now using satellite as well as earthbound methods. There are transmitters and translators relaying signals across the country into remote areas. We know all about this in Tasmania, especially with the introduction of aggregation.

We have learned that waves travel in straight lines in empty space, but things like the earth's surface and atmosphere, along with humidity, rainfall and solar activity, can do amazing things to change these signals. Our mountains in Tasmania seem to play great havoc with the new UHF signals. There are all these spaces to be used within the spectrum. And then there are our amateur users, those enthusiasts who have made a hobby out of communication and research around the world, who were the pioneers--going from the crystal sets and the morse code to the more sophisticated equipment that we install today. There are

all those other uses, including radioastronomy; standard time and frequency signals; industrial, scientific and medical, and military and domestic uses. The latter area includes such things as microwave ovens and garage door openers.

The purpose of these bills, therefore, is to assist the implementation of a new apparatus licensing regime which resulted from a public inquiry by the Spectrum Management Agency some time ago. It is a chance for apparatus licensees to choose whether they pay their licence fees up-front or by annual instalment. The amendments are not related to the proposed increases to apparatus licence fees, including those for amateur radios.

With all these things in modern day life, to make things work better requires some sort of charging. The amateur radio users are one such group in that field. I have had a number of people write to me about the suggested amateur radio licence fee increase to $71. Their suggestion is that it is too much for an amateur group. I feel that there is a lot of merit in their argument. I have discussed this with members on my side of the House and I have put my concerns, as others have done, to the minister. These people do not operate for profit, and they play an important role in research, in emergency communication at times, and just as a communication tool between people who find it very difficult to enjoy physically travelling from place to place. This way they can travel on the radio airwaves.

The government has responded to my representations and those of other members of the House on this matter. The SMA has decided to reduce the proposed fee, leading to a flat charge of $51 per annum for all amateurs. It was after consultation and in recognition of the valuable service provided by amateurs to the community in maintaining communication links and in training young people to be proficient in communications technology that the government took this decision, and I believe it was a good decision. I am told this will not be offset by any increase in fees paid by other radio communication licensees, so I am really happy that there has been a reasonable outcome to my representations.

In general, these bills are essential to start coping with the mass use of the radio spectrum. I am sure that there will be a whole host of other uses as the years go by with the technological change we are facing. This will require careful management and, if we are to make use of all our electronic equipment, we will need this sort of management. This is a way of keeping the costs of everything running smoothly and of ensuring it is shared among the users. I commend the bills to the House.

Mr SPEAKER--Order! It being almost 3.00 p.m., the debate is interrupted in accordance with standing order 101A. The debate may be resumed at a later hour. If the honourable member for Lyons thinks of anything further he would like to say, he will be given leave to continue speaking when the debate is resumed.

[DH - there was supposed to be a part 10 of 10 - I never saw it]

VK2 Divisional news

WIA examinations

The next examinations conducted by NSW Division of the WIA will be held at Amateur Radio House Parramatta, 109 Wigram St., on Sunday 2nd April 1995 at 1.00 p.m.

Applications close : Thursday 23rd March

Trash and Treasure Sale

The next Trash and Treasure Sale is on next Sunday 26th March at Amateur Radio House Wigram Street Parramatta. Entry is free to everyone.

Sellers are allowed in at midday, buyers can come in at 1 pm.

What to bring with you ? -- money, and lots of it, and a large truck for some of your purchases. And, don't forget ... hot dogs and cool drinks will be on sale. So if you want to reserve a spot, give a call to the Divisional office.

Bargains galore -- we need the space!

WICEN news

WICEN News

Hunter WICEN have a meeting tomorrow, at the Emergency Operations Centre, on the corner of Elizabeth and Hannell streets, Carrington, starting at 1900: please contact Pauline VK2GTB for further details. The closing date for the next Newsletter has been moved to next Thursday, 23rd March; articles must be in the hands of John VK2AMH (the State Co-ordinator) by then, and he has undertaken to assemble the various diverse formats and send them down to the Newsletter editor. Don't forget to vote at the State Election next Saturday; and WICEN's end of financial year is 31st March, at which renewals are due.

Events in April include the VRA Mid-Year Conference at Wooli (between Coffs Harbour and Grafton) on the weekend of 1st-2nd April; the Forster Triathlon on 9th April, and is commanded by Michael VK2CMW and Darryl VK2DAZ; the Hunter Anzac March, commanded by John VK2JRC is on 23rd April; and the Oberon Car Rally is on 29th April, with about 20 people required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388. Finally, don't forget that the increased Amateur fees are expected to come into force in April, so keep writing!

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123,

St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Dural report

Dural News

Last week saw another working bee here at Dural, and the 6m repeater transmitter antenna was installed atop the tower, and other antennae straightened; thanks go to Peter VK2XZP for doing the monkey-work. Those listening to us on 6m FM, on 52.525, may be interested to know that this service was transferred to that antenna just before last Sunday evening's broadcast, and reception reports are welcomed.

Also last Sunday morning was a test transmission on our new 10m FM service on 29.120 MHz (vertically polarised); this test was successful, and assuming the Dural Engineer can get his act together this will be a permanent fixture from next Sunday. The 10m FM band is expected to be granted to Limited calls soon, and the NSW Division is pleased to be able to offer this service, the only one in the country. Also, don't forget that a 10m repeater is in the works; the VK2 Division is committed to utilising as many bands and modes as possible.

By the way, should anyone have a spare vertical antenna suitable for use on 10m then please let us know; and if listeners want the 6m SSB service to return then a transceiver, crystal-locked with at least 10 watts output, will be required.

48th Urunga convention

Urunga Radio Convention

The 48th Annual Urunga Radio Convention will be held this Easter Saturday and Sunday, 15th and 16th April.

The convention will take place in the same hall as the first convention in 1949, which is now the Senior Citizens Hall in Bonville Street with access to the parking lot via Bowra Street. There is full disability access.

The tradition of fox hunting continues, with ever more interesting places to find a fox. This convention leads the way in fox hunting and a challenge is out for other foxes to come to Urunga and hide. Please contact one of the convenors on the day, you'll be most welcome.

Other features include the Urunga Scrambles, trading tables, displays and competitions for all visitors and family. Awards are presented on Sunday afternoon.

Creature comforts are high on the list of necessities. The convention site has a very comfortable and quiet loungeroom and conveniences beside the hall. Tea and coffee are always available free. Your friends and family will feel very much at home. The village of Urunga is a top holiday spot close to Coffs harbour and the Dorrigo National Park.

The Urunga Radio Convention Committee cordially invites you to attend the convention this Easter, to be part of the activities and have a great time.

Further information is available from VK2ZCQ Brian, VK2DMS Merv, VK2ADA Arnold, VK2DGT Ken, all QTHR.

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

VK2MJ HF-VHF Internet gateway

VK2MJ HF-VHF INTERNET GATEWAY

For about six months Michael Walton VK2MJ has been operating a packet gateway so that country amateurs can have the same facilities as city amateurs. This gateway is not the normal packet gateway found on the HF bands which act as a link to the gateway's BBS or link to the local packet system; the VK2MJ gateway is a link to INTERNET and the world.

From the gateway you are able to talk keyboard to keyboard with amateurs around the world, and send them messages direct to their computers in seconds. You do not have to rely on BBS's to send your mail this way, as it is done by you, the operator.

The Gateway was running "paKet 6" as the software and using the gateway in the TNC to do the switching from HF to VHF. Two weeks ago the software was changed to "JNOS 110d" so that additions could be made to the gateway.

The change to NOS means that users do not have to connect to the Macquarie University gateway VK2GMU to make a connection to other countries; it can be done from the NOS BBS on the gateway itself. Also, mail can be sent or received from the BBS to other users of the Internet system.

If you wish to use Netrom nodes or want a list of nodes or telnet addresses you can connect to the Macquarie gateway by AX.25 or TELNET. At the moment there is no connection to the normal BBS system to send to non-Telnet users; this may happen later but it depends on what facilities are made at Dural and at the Macqarie University gateway.

It is planned to put a port on to connect to VK2AAB so that users can access a normal BBS and read and send normal packet mail.

At the present time there is no intention to operate Netrom as it clashes too much with TCP/IP. The gateway is a "users" gateway and as such BBS forwarding is not catered for and will not be encouraged.

It is hoped that this gateway will enhance the Dural facility when it is operational and give country amateurs a touch of the big smoke.

The operating frequencies are 7.035 MHz and 145.050 MHz.

-- Michael VK2MJ

Club news: Summerland

The Summerland Amateur Radio Club
Coming events

A social evening is being organised for this coming Wednesday the 22nd at the Onon restaurant in Lismore. Check with John VK2XKX for details and bookings.

The next Radio Amateur examinations will be conducted in the Club rooms at Richmond Hill on Sunday 9th April, applications close on 26th March.

The Grand Summerland Computer Expo is getting closer -- Saturday 27th May in Lismore City Hall. Commercial displays in the latest in computers and electronics, bring and buy tables, disposals, amateur radio demonstrations plus door prizes, refreshments. Admission is two dollars. See Rick VK2DJV for more information.

Next monthly meeting on 7-4-1995 at NBN Television studios NCLE starting at 8pm.

from R. Prout VK2CN Secretary

Club news: St. George

From the St George Amateur Radio Society

The next meeting of the Society will be held at the usual venue, that is in the 1st Allawah Scout Hall, corner of Bellevue Pde. and Blakesley Rd., South Hurstville at 7.30 pm on Wednesday evening the 5th of April, 1995.

Visitors are always welcome to club meetings, coffee, tea and biscuits are provided and the members look forward to meeting those interested in attending.

The society invites all interested amateurs to its annual Allan Pettiford Memorial Auction which will be held next month on Saturday the 1st of April at its usual meeting venue in the 1st Allawah Scout Hall, South Hurstville.

Equipment for the auction will be accepted between 10 and 11am.

Viewing of equipment between 11 and 12noon.

Auction to start at 12noon sharp.

Visa, Mastercard and Bankcard credit card facilitation are expected to be available and the snack bar will be open during the course of the auction.

So, look around your shack, dust off any unwanted gear or components, come along and sell a little, maybe buy a little, but above all be part of what is usually one of the highlights on the St. George calendar of events.

Inquiries regarding any specific details are welcome, please phone the society's publicity officer Allan VK2XF at home on 533-1006.

de Allan VK2XF, Publicity Officer

Club news: Fishers Ghost

Fishers Ghost Amateur Radio Club

The Fishers Ghost Amateur Radio Club meets every third Tuesday of the month at the Campbelltown High School in Beverley Road, Campbelltown.

On Tuesday next, the twenty-first of March, well-known experimenter and radio amateur Mister Jack Heath will speak about remote radio control.

On the fourth Tuesday of the month the club conducts a meeting especially for Packeteers.
The next meeting of the Packeteers will be on the twenty-eight of march at the Campbelltown High School in Beverley Road.

Visitors are welcome at any of these meetings.

For any information about the club's activities, call Les Simmons on 046 28 3839.

Club news: Liverpool

The Liverpool and Districts Amateur Radio Club held its March meeting last Tuesday night and members who did not or could not attend should note the following change:

Our meetings will in future be held on the second WEDNESDAY night of each month. This move has been necessary to avoid clashes with many other fixtures. It appears Tuesday has been a very popular choice for many clubs.

The next meeting of the Liverpool Districts Amateur radio Club will be held on WEDNESDAY night, 12 th April. Please mark it on your calendar.

At our last meeting Richard VK2ARS gave a very interesting talk on Homebrewing tips illustrated with overhead slides and examples of his work.

This talk was followed by a brief talk from Paul VK2UPB explaining some of the features of the DopplaScan Foxhunter.

Don't forget, our next meeting will be Wednesday the 12th of April at 7.30pm.

Brad, VK2QQ Publicity Officer

Coming events

COMING EVENTS

Now, a summary of upcoming events of interest to members and other Radio Amateurs and Shortwave Listeners...

Proposed new Amateur licence fees were due to come into effect on the first of March, but have been delayed until April -- so please keep writing!

Hunter WICEN meeting (Pauline VK2GTB). . . . . .Monday
Waverly ARC Amateur classes begin . . . . . .Tuesday
Fishers Ghost ARC lecture night . . . . . .Tuesday
Divisional examinations, applications close . . . . . .Thursday
Daylight Saving Time ends in VK3, VK5, and VK7. . . .Next Sunday
Divisional Trash and Treasure Sale . . . . . Next Sunday
Fisher s Ghost ARC packet night. . . . . 28 March
Great Lakes ARC members' meeting . . . . . 31 March
St George ARS Annual Alan Pettiford Memorial Auction. . . 1 April
Divisional Examinations . . . . . .2 April
St George ARS meeting . . . . . .5 April
Deadline for comment on SMA paper "A New Outlook" . . . . 21 April

If you have an event you'd like publicised on the weekly broadcast, then please send details to the Divisional Broadcast Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, by fax on (02) 626-6066, or on packet to VK2SKY @ VK2AAB.

Items can also be forwarded to the Divisional Office before close of business on the Friday before the broadcast.

: > : In fact, I believe the forced 3 MHz duplex link channel plan you use in
: > : northern California is unique. Five mHz (or approximately 5 MHz) duplex
: > : link spacing is the norm everywhere else.
: >
: > In order to allow the greatest multi-use of the 420 - 450 MHz amateur radio
: > spectrum in northern california, band planners saw the need to tighten
: > the duplex link requirements. We are able to accomadate over three
: > hundred auxiliary duplex links without interference to the two very
: > active ATV frequencies.

: BOB - Maybe you can explain to all of us how reducing the separation
: between transmit and receive frequencies allowed you to fit more stations
: than before, even though their signal bandwidths were not decreased?? The
: transmitter still takes 20 kHz and the receiver therefore still listens to
: a 20 kHz window. Changing the spacing between them does not provide
: additional spectrum to accomodate more users; decreasing spacing merely
: adds increased filter/duplexer losses and reduces the overall efficiency of
: the link or repeater system.

This is not a simple issue. The northern california UHF band plan allows the
greatest number amateur radio Uses of the band while trying to minimise
interference between these Uses.

: Now just to set the "We did it first" record straight, the FCC Rules
: governing sharing of the 470-512 MHz TV channels with land mobile were
: written and implemented in the late 1960's. Thus I cast serious doubt on
: Bob's claim that "In recent years the FCC has followed our example in
: planning the 470 - 512
: commercial bands." Talk about revisionist history, this one even uses a
: time warp!

You may be correct, we may have been operating in parallel with the other
radio service band planners at the time. Our amateur 420 auxiliary
services were operational well before the commercial services occupied the
uhf television T-band.

: In fact, the frequency separation was chosen SOLELY because the TV channels
: are 6 MHz wide by FCC decree, and therefore the only logical separation HAD

: to be 3 MHz to maximize occupancy of the available 6 MHz windows. Sadly,
: nobody thought enough about the effects of the highest base/repeater
: transmitter at bottom.edge.freq+2.9875 MHz on the lowest receiver at
: bottom.edge.freq+3.0125 MHz (which is a T/R separation of only 25 kHz) to
: mandate some common sense geographic separations as well.

The tx - rx inter service separation is a known problem for all radio services in the UHF spectrum. While there may be no commission rules, most service coordinators solve these issues on a case by case basis.

: Getting back to the issue, the T/R spacing INSIDE the 6 MHz TV channels has
: absolutely no bearing on the T/R spacings of other systems operating on
: different modes outside the subject frequency window. If anything, the
: NoCal bandplan has probably STIFLED growth of traditional amateur
: voice/data repeater systems in the (non-TV) 432-450 MHz portion of the
: amateur UHF band, because standard commercial UHF equipment with the
: FCC-mandated 5 MHz T/R offset cannot be used in NOCal without significant
: modification. In this case having no standard is still better than having
: the WRONG standard.

Now for some non-revisionest history...The UHF repeater sub band in northern california is 440 - 450 MHz with five MHz offset. Originally folks operated at 444 and 449. Most repeaters used positive offset while the repeaters at broadcast sites used negative offset because of co-located 450 MHz transmitters. Auxiliary linking was done in the 440 - 442 and 445 - 447 MHz sub bands. Today auxilary linking is done in the 420 - 426 MHz sub band with 20 kHz channel spacing. All amateur UHF repeaters in northern california now use the commercial positive five MHz offset.

This plan has allowed more groups to enjoy building repeaters and links. You might look in the ARRL Repeater Directory to see that northern california has more active UHF repeaters than any other state! Moving the auxiliary link activity to 420 MHz has allowed the entire 440 - 450 sub band to be used for repeaters.

You might want to look at the nation wide 1240 - 1300 band plan. Similar six MHz windows are in place to accomadate amateur television. The six MHz wide repeater sub band uses a twelve MHz offset. Over three hundred fifty 1280 MHz repeater owners in california know this works well!

California again leads the nation with a sound six meter band plan. While the rest of the nation bickers over spacing we have had unpresidented growth with our 500 kHz offset spacing! Our state wide plan allows far more repeater and digital activity in the six meter band. If these plans were un-workable you would not find the tremendous growth we have experianced.

: And last, look at how efficient digital communications is when compared to
: analog. Take a standard telephone line that runs from 300 to 3800 Hz. The
: phone company digitizes that into a DS0 data stream that runs at 64 kbps.
: Where is the efficiency of digital in this arrangement, and how are you
: going to put more digital signals into the same NTSC 6 MHz video channel,

Lets not confuse wire line modulation teckniques with the new digital modulation used with rf transmitters. Certainly a fine television picture can be sent at the T1 data rate using only 1,54 MBs. This digital modulation does not begin to use the AM bandwith of six MHz. Look at the new motorola nextel digital radio systems now operating in the 800 MHz smrs radio service. The new digital radios will use processing power to compress bandwidth in real time. I look forward to computer to computer amateur television in the near future. DSP processing power is already in our computers today allowing us to send video over 14.4 or 28.8 KBs modems. Better pictures could be sent over a 64 KBs amateur radio occupying a 100 kHz bandwidth. Real time DSP will allow more amateurs to have fun with video repeaters and network video.

Looks like the new 219 - 220 MHz amateur band has been divided up into 100 kHz or 64 KBs channels for our new amateur digital radio service. Looks like someone is thinking of the near future, rather than repeat the mistakes of the past. W6GO an amateur in the small northern california town of Rio Linda started the ball rolling for this new band over six years ago. Thanks Jay!

>upgrading to Tech opens up more opportunities, not takes them away.

I'm not aware that Technicians were ever locked out of 2 meters -- though they (like Novices) were limited to 145-147 MHz, which is how the present split between 146 and 147 MHz FM subbands came to pass. The Technician license was not supposed to be a step between Novice and General -- it was intended for those
who intended to experiment above 50 MHz rather than communicate below 30, and it took a while for the FCC to come to its senses, realize that Technicians had in fact passed the Novice elements (this was before no-code) and deserved the same HF privileges. Also remember that the whole purpose of the Novice class is to allow new hams to gain experience before upgrading -- they had HF privileges for those intending to upgrade to General, and VHF (145-147 MHz) for those who intended to upgrade to Tech and had no intention of working HF.

Sometimes?

This idea is like throwing the baby out with the dirty bath water. More hams than I can count have learned their CW with the W1AW code practice; those transmissions would most likely become illegal under such a plan. Thanks Fred, but no thanks . . . this one ranks right up there with offering to send our 610 renewals in for $5 when we can send them in ourselves for 32 cents!

i've had several experiences entering theme parks with radios. the way i usually combat the problem of the park personell with their cries of "interference" is to have a pre-printed list of the park frequencies and the frequency i plan on using. typically, since most parks tend to stick to one band (and i mean "most" parks, some use both vhf and uhf), i opt to use the opposite band they use as it tends to further calm their concerns. usually there are few problems after a brief conversation with a security officer or supervisor. i haven't been turned away yet and i've been to many a park.

Emarit,

All Amateur radios that have a receiver that operates at over 30 MHz are
subject to Part 15
rules. Now if you build your own receiver you do not need to pass Part 15
per say, but a
manufacturered radio does. Any Amateur radio that operates 30 Mhz and
below, does not need
to be Type Accepted, only the HF amplifiers are Type Accepted below 30 MHz.
Part 97 applies to
all transmitters HF and VHF and above as the FCC does not check the
transmitter at all.
Generally the 30 MHz and up receivers are tested under the scanning
receivers section of

Part 15.

For more on Part 15 you will need to get a copy of the Code of Federal Regulations which
contains FCC rule Part 15.

Does this extend to field day and all contest's or just to a few. How much does one group have to give up to make another group happy.

I really think thatmore people would be served by co existance than the harm to any one group by banning any activity.

I'd have to agree, unless you happen to be in one of the flat, mostly farm states. Here in Massachusetts, it's tough enough to not end up dead without having to hold up one side of a repeater chat. I don't even like to yak it up too much when I'm in traffic in the car! I have one of those "serial access" brains that can't do two things at once very well...

Hey, I could put it on a scope and measure it if those guys really want, but I have no reason to believe my wattmeter is that far off... SWR is < 1.1:1, (into 60 ft. of dummy lo... er, um, coax) so nothing funny going on.

The gain of class C power amps is dependent on the beta of the particular transistor, you know. The spec is usually *minimum* power out.

I agree somewhat. I normally run a few hours of class E (at home with
generators) during Field Day, just to test the generators. I can't
take any more than a few hours distributed over the weekend.

I also run contests, but not for the score, just because so many
stations are on the air. This is a great way to advance my DXCC
scores. I _especially_ like RTTY contests because it's the _only_
way to get new states/countries. Except for the contests, RTTY
is pretty dead.

3772. FT-51R DTMF decode? how does it work?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-21 12:59:26 UTC
From: mudaw@uxa.ecn.bgu.edu
Message-ID: <3kmije$u9@ecom2.ecn.bgu.edu>
Source record: 250365

Concerning the FT-51R, It has some sort of a DTMF decoder.
I am trying to find out if it has the capability to decode
DTMF tones, that are not a series of three, separated by a *, and
another three tones. Nobody in my area uses this paging option,
and there is no way for me to test the capabilities of the radio,
except that it can receive some pager frequencies. These
frequencies use DTMF tones, but can I get my HT to decode them?
OR, another idea, if someone used the autopatch on the local
repeater, can the 51R decode the phone number being dialed?

Please let me know how this thing works.
Thanks,
Dave

Ah, now Ed, you start to get the point. When someone can answer 50 questions
and gain all sorts of operating privs on frequencies, shouldn't they have a
basic understanding of the propagation characteristics of those frequencies?
"Uh, gee, I don't understand why he can't hear me. Maybe I'd better boost
power to 1.5kW."

Not any more. Today just put an X on the dotted line, get your 25 Tony Tiger
points, and mail $5.99 to Newington (to cover shipping/handling) to get
your amateur radio license. 10-4!

>Uhhhhhh, what make propagation different for FM than AM?????????

The only difference is the FM capture ratio, which actually is to your
disadvantage with DX signals down near the noise floor.... AM is definitely
better in this regard, especially in a noisy environment.

The reason the aviation folks use AM is so that they can talk over top
of one another... while this might not be polite, it makes it possible to
break in on another transmission, which could be of benefit in an
emergency.

Hallo Theo,

I know the situation, now the reason is, that you normally *just*
learn what you practice for. Here it does not matter if it is
random characters, numbers, words, callsigns or actually QSO
text. Each type of transmission wants to be trained individually,
(at least for my brain).

So for english random text there are plenty of programs, and
as to the german texts in the exam you will have to write a text file
or have someone tapping it out at you.
Viel Spass beim Ueben und mehr erfolg das naechste Mal, 73, Moritz DL5UH

3780. Ramsey 220 MHz kit. Does it work?

I am thinking about buying the Ramsey FX220 220 MHz ham transceiver.
The only Ramsey kit I have is the SS-7 descrambler and I had to
"modify" it to get desireable results. My question is, how well
will this work out of the package (without mods)? I don't mind
spending some time improving it but I don't want any BIG surprises.
Is it worth the $149? Please share your experiences.

I just picked up an Icom R-1 and need help programming to memory. In trying to do the example in the book on programming a memory channel to the 2m freq ... here's what I do:
1. Push MR to get "M"
2. Select the channel # with tuning control.
3. Push CL to select VFO
4. key in frequency.
5. Push F+1(Mode) one or more times to select FM mode. HERE IS THE PROBLEM?? When I simultaneously push F+1 trying to change the mode, the only thing that seems to happen is the numbers(freq)changes.. not the mode.

Help.............. anyone willing to give me a call and step me thru this once on line? Or e-mail me your number and I'll call you..... I don't have Icom's number or I'd call them. The candy store has never been able to step me thru a learning curve... it's always been fellow hams.

GG>in bands that are intended for 2 way communications.

Time out! HF rig on a bicycle? That's a bit of a stretch of my credulousness.

Perhaps a 2-meter HT on a bicycle is more likely. But Fred's proposal is to move the bulletins and Morse practice above 30MHz, like maybe to 2-meters. Ooops, truck just hit another of my kids.... but I got my HT here with a hot battery..... what the heck -- there's N1MBO transmitting bulletins on the repeater. Another kid bites the dust. Darn, I wish I had an HF rig on this bicycle!

>
> Thanks and 73
> W4TZB

Yes and yes. A quite friendly bunch too. Contact the ARRL (members and non-members will be served) for a Bermuda package. They (ARRL) send an info form and license application. File the application with Bermudian authorities and your permit will be forthcoming. Think you have to have a General or higher, though.

When your permit (free) or license (fee required) is returned, you will have an updated info form included. By all means, go by the info form accompaning your permit.

Be sure you have your permit when taking a radio in. Declare the radio at Customs ... don't "forget" that you have it. You might need ownership papers for the US Customs on your return.

Last time I was there, there were two repeaters; literally one on each end of the island. Both cover very nicely. Open autopatch too!

Have a great time! Rent a moped and see the island! They (the Bermudians) are very nice people and quite friendly.

: >upgrading to Tech opens up more opportunities, not takes them away.
:
: I'm not aware that Technicians were ever locked out of 2 meters -- though they
: (like Novices) were limited to 145-147 MHz, which is how the present split
: between 146 and 147 MHz FM subbands came to pass. The Technician license was
: not supposed to be a step between Novice and General -- it was intended for
: those
: who intended to experiment above 50 MHz rather than communicate below 30, and it
: took a while for the FCC to come to its senses, realize that Technicians had in
: fact passed the Novice elements (this was before no-code) and deserved the
: same HF privileges. Also remember that the whole purpose of the Novice class is
: to allow new hams to gain experience before upgrading -- they had HF privileges
: for those intending to upgrade to General, and VHF (145-147 MHz) for those who
: intended to upgrade to Tech and had no intention of working HF.

I don't know what the intention was, but the original post above is correct
as I recall. When I "upgraded" to tech (around 1960) the tech license
did not allow any operation on 2 meters. Perhaps the change that gave
all techs all privaedges over 30MHz came about at the same time as
incentive licensing (around 1967). I don't know the details as
I was inactive from around 1962 until just a few years ago.

SB QST @ ARL $ARLB026
ARLB026 Vanity call change sought

ZCZC AG92
QST de W1AW
ARRL Bulletin 26 ARLB026
From ARRL Headquarters
Newington CT March 21, 1995
To all radio amateurs

SB QST ARL ARLB026
ARLB026 Vanity call change sought

The ARRL has petitioned the FCC for partial reconsideration of one aspect of its proposed vanity call sign program.

The League has asked that the Commission require that amateurs requesting vanity call signs in eligibility ''gates'' other than Gate One specify call sign choices in the call sign region of their then-current mailing address. (Gate One is for applicants for a previously held call sign or the call sign of a deceased relative.)

The League said that, reinforced by the comments of a number of amateurs, it believes that the history of call sign regions and the nature of Amateur Radio communication indicate that call sign regions should be retained for vanity call sign applicants. ''Amateurs are in general most supportive of the use of call signs as a quick means of determining the general location of a station,'' the League said.

The League also said that, because some call sign regions would have fewer available call signs than others, allowing an ''open field'' would deplete the call sign pools in some regions, ultimately depriving some applicants who want a call sign in their own region the opportunity to obtain one. The ARRL cited in particular the limited call sign banks in Puerto Rico (KP4), Alaska (KL7), and Hawaii (KH6), as examples.

The ARRL said that otherwise it fully supports the Commission's vanity call sign proposal, and that it believes sufficient time is available to consider the League's proposed change before the FCC is ready to open Gate Two, the first that would be affected.

Special Bulletin 13 ARLX013
From ARRL Headquarters
Newington CT March 21, 1995
To all radio amateurs

SB SPCL ARL ARLX013
ARLX013 Hamvention honors trio

The Dayton Hamvention has announced its three major award winners for 1995.

The Hamvention Amateur of the Year is Rosalie White, WA1STO. Rosalie, 45, is manager of the ARRL Educational Activities Department, a member of the Shuttle Amateur Radio EXperiment (SAREX) Working Group, and coordinates ARRL continuing education workshops held at major conventions around the country. She holds an Advanced class license and has been a licensed amateur since 1970.

Winner of the Hamvention Special Achievement award is Ed Briner, WA3TVG, of Acme, Pennsylvania. Since 1979, Ed, who is 68, has been involved in humanitarian work providing medical assistance through the Medical Amateur Radio Council (MARCO). He is editor of the MARCO newsletter.

Philip Ferrell, K7PF, is the Hamvention Technical Excellence Award recipient for 1995. Phil, 61, holds a doctoral degree in electrical engineering, and is retired from the Boeing Company in Seattle. The Hamvention cited him for developing ''FingerPrinting,'' a method of identifying radio transmitters by their on-the-air ''signature.''

1995 marks the fourth out of the last five years that an ARRL official or employee has been the Hamvention's Ham of the Year. In addition to Rosalie White, recent winners have included Hudson Division Director Steve Mendelsohn, WA2DHF; retired ARRL General Manager (and now International Amateur Radio Union President) Dick Baldwin, W1RU; and retired ARRL Washington Area Coordinator Perry Williams, W1UED.

3793. Re: Why contest?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-21 17:23:00 UTC
From: dieven@almaden.ibm.COM
Message-ID: <9503210923.ZM18889@penguin.almaden.ibm.com>
Source record: 250285

Jordan Peugeot <dmunroe@vcd.hp.com> asks:

>>Could someone explain what the appeal is in contesting? I realize that people >>have differing ideas of what is fun, but, if contesting is what >>I think it is, spending an entire weekend making thousands of extremely >>brief contacts not only sounds boring, but also seems to be an incredible >>abuse of the spectrum. Wouldn't it be more enjoyable to use the time to >>have real QSO's and possibly make new friends in the process?

Contesting is a sport. And most sports, when viewed objectively by a non-combatant, seem quite silly. Take football. 22 grown men chasing after a ball. With all the money they spend on it, they could buy everyone their own ball and then they wouldn't have to fight over it. Or golf. Golfers hit a ball a long way. Then they chase after it. And when they finally find it, they hit it again! Why anyone in their right mind would CHOOSE to run 26 miles in a marathon is beyond me. From the looks on their faces runners certainly are in pain for at least part of this effort. If it hurts, why do that? Why do kids plug quarters into a video game machine that makes zapping noises and press buttons as fast as they can? They can watch their home television for free.

The appeal of contesting is similar to any competitive sport. You enter an artificial situation for a finite period of time and try to make the most points (or whatever goal you set for yourself). If you chase DX, after a couple of years it is a rare event indeed to work a new country. My "position" in the DX club based on countries confirmed is not likely soon to exceed the position of the Old Guys who have 360 countries confirmed. But in a DX contest, everyone starts at 0000Z with zero. And 48 hours later I have a fair shot at having more DX countries (or more multipliers or more points) than others in my
situation.

You're right in some contests that running endless strings of QSOs with the same country is numbing. But in Sweepstakes, for example, there are 77 sections that I need to work to make a "clean sweep". And making that last QSO with Hawaii or Quebec or the Yukon Territory to make the clean sweep is quite a rush.

So contesting is like ham radio compressed into a weekend. You chase DX, you work a lot of guys, and your operating skills improve. Trying to learn how to break a monumental pileup? Try working all the Carribean stations on all bands in one weekend. Your skills will improve. Trying to learn how to be a DXpedition operator? Take a trip to a rare county in a state QSO party and run stations all weekend. Want to learn about propagation? When is the right time to turn the antenna for long path to Europe on 40 meters? During a DX contest there will be a lot of stations on, so you'll have lots of chances to practice.

Most of the QSOs made by the "big gun" contest stations are not with other "big guns", but with casual participants, guys with 100 watts and wire antennas. The participants are looking for a little DX, maybe just the fun of being in the contest. Few stay the entire 48 hours. And many of the hard core guys find themselves, at one time or another in the contest, wondering what they are doing staying up all night playing with the radio. This must be fun, we say! I liken this to the marathon runner working through a rough spot to get to the finish.

There's a fairly good writeup in the ARRL Operating Manual about the appeal. And like a lot of sports, the appeal is hard to explain unless you try it out. You might just like it!

As for "spectrum abuse", some contests help people to understand that some ham bands that are normally not used adequately are very good for amateur communications. The ARRL 10 meter contest, I think, may have started this way. There's an adage, "Use it or Lose it". And contesting does help generate activity that keeps the usage up on our bands.

I'm still working new countries in contests, too. Not many at a time any more, but it's not unusual to work 100 countries in a DX contest weekend.

Even though the QSOs are short, after a few years you start to recognize a lot of the calls you hear. And I meet these guys (and a few gals) in social occasions. There is a local contest club. We all have a great time at Dayton and Visalia. The camraderie of those in many sports is similar. You like being with those that share the same passion that you do. Even if you're going to compete against them in contests all year. The friends from other countries that come to visit me and those I go to visit are generally contesters. Those friendships mean far more than the friends I'm likely to make with a typical ham radio ragchewing QSO where one discusses the weather, equipment inventory, and then "gotta go".

Contesters (and DXers, and CW traffic operators) think of themselves as better-than-average operators, able to handle stressful situations where lots of interference abounds, and the QSO rates are high. It is good training for handling lots of callers, which might be valuable, for example, if I found myself the only station active in an emergency zone. I'm active in RACES/ARES in San Jose. A lot of it is pretty mundane. But if the situation heats up and lots of people are calling over one another in relative chaos, it is my contesting training that will give me the confidence to deal with that situation better than some of my colleagues. I think National Traffic System net control ops grow similar (but not identical) skills.

Contesting is open to all. Our club's youngest member, Jenny, is 10 years old. She recently upgraded from Technician Plus to General. She told us all in our annual awards banquet that now she was "going to kick butt with the big guys".

3795. ELNEC vs CoProcessor TRICK?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-21 17:39:51 UTC
From: gene@eagle.csl.uiuc.edu
Message-ID: <gene.795807591@eagle.csl.uiuc.edu>
Source record: 250288

I got ELNEC (co-processor version) for Xmas and needed to put together a faster system. I purchased a 386DX-40 (or 33) motherboard to use with an Intel 25 MHz co-processor I had....but found that performance was marginal even at the 33 MHZ jumper position. Using the Non-Turbo mode slowed it down too much (about a factor of two). The motherboard had only one quartz crystal on the entire board. It was approx. 14.3 MHz. Perhaps they double it for 28.6 (33 MHz), and triple it for 42.9 (40 MHz). At any rate, I substituted a 12 MHz Xtal for the 14.3 (simply cut one trace on foil side...leaving it in place with only one side connected) and tack-soldered the 12 MHz on the under-side of the motherboard. Using the 33 MHz jumper connection, I assumed the 12 MHZ gets doubled to 24 MHz which made ELNEC run properly...presumeably because the 25 MHz co-processor is now happy. Of course the internal clock now loses time, but I can tolerate that.
Incidentally, let me add that Lewellan's ELNEC Antenna program is Very Impressive.It performs dozens of functions with an easy press of a key or two which is clearly notated on the color screen....and seems to provide about any feature you can think of. After a few years of tinkering with the original MinneNec...experimenting with modelling becomes fun. Most of the ones I model get evaluated and plotted in about a minute.

I have a TS50 and AT50, and extra hand mic and the looong cable between the tuner and rig. I'd like to trade these guys for a normal sized rig. This one just looks too silly sitting on the shelf. I don't go HF mobil anyway. I'd say the value is around $950 so what do you have that is worth that much to trade? I like Icom and Yaesu better than Kenmore and I'd consider TenTec, too. I'd consider a premium scanner (AOR, Uniden, etc) and/or an older HF plus cash or whatever you've got, make an offer. Just don't be silly, this is a very nice rig in really good condition and I won't give it away. By the way, I do NOT have the boxes, but do have the manuals and a few other goodies for it.

Send email with offers, etc.

Joe

Hello,
I just picked up an old Motorola PT400 transportable FM
RadioTelephone on 158 Mhz. I'm wondering if anyone knows where to get
documentation on this unit? How to convert it to two meters? Any
accessories available?

The full model number is: P43DEN3100BM

Please help!
Thanks!

Or put your $40 into a radio that you don't have to return 3 times
to get one that works... In that way, you'll save some headaches.

Just a thought...

Actually, I didn't expect much from the pre-amp for this reason. It's basically "sucking air" - there's not much signal left to amplify by the time it gets down the cable. I was surprised, however, just how bad it ended up being. Still, having the pre-amp in the shape it's in now is better than with the fried transistor it had before (a ham swap purchase :-( ).

You can find general satellite info in such references as the "CQ Amateur Radio Almanac," the "VHF How-to Book" or the "Getting Started in Amateur Satellites" video, all available from CQ. You may also get, from a variety of sources, satellite tracking programs for your computer. AMSAT has the most popular ones (and if you're going to operate satellites, you ought to join AMSAT anyway). Then you can download up-to-date "Keplerian elements" from any number of online sites that give the programs the numbers to crunch to tell you where and when you'll find a specific bird.

In article <3kesdg$adb@newsbf02.news.aol.com> lydiapolk@aol.com (Lydia Polk) writes:
>spam

Sorry, Jeff, but all the newsgroups in which I posted my 2-line notice about the availability of my article were appropriate newsgroups for this posting. . . .

>40 newsgroups

Jeff's implication here is that if there are 40 appropriate newsgroups out of 8,600, that it's not OK to post a 2-line notice about the availability
of my article to those 40. This is absurd on its face.

Due to the activities of certain commercial enterprises on the network, any message posted to more than 25 individual newsgroups is defined as spam and is likely to be cancelled by one or more of several agents on Usenet.

This is not related in any way to the content of the article, just the way in which it is posted.

This is important: note the difference between crossposting an article to N newsgroups (one copy is propogated, and most newsreaders will only show it to users once) vs. posting it individually to N newsgroups (N copies are propogated, and all newsreaders will show it to users in every group they are subscribed to that gets the article). In the latter case only, if N is 25 or more, your article will almost certainly be cancelled.

I have no comment on the content of the original Polk posting; but I want to make sure she and her respondent understand what is considered spam and what isn't.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 21/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 21 MARCH AND FORECAST FOR 22 MARCH - 24 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 90/34

GOES satellite data for 20 Mar
Daily Proton Fluence >1 MeV: 8.2E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 3.4E+08 (moderate)
X-ray background: A6.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
22 Mar 23 Mar 24 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 22 Mar: 92/37

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 20 Mar
Learmonth 2 2211 1000
Fredericksburg 3 4
Planetary 5 6

Observed Kp for 20 Mar: 1111 3322
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
22 Mar 5 Quiet
23 Mar 10 Quiet to unsettled
24 Mar 5 Quiet
COMMENT: A slight increase in the level of activity is possible on 23
Mar due to a long-duration flare and disappearing filament late on 20
Mar.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
21 Mar normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
22 Mar normal normal normal
23 Mar normal normal fair
24 Mar normal normal normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
21 Mar 30 near predicted monthly values

Predicted Monthly T index for March: 15

I just noticed the new 2 meter mobile being offered by
Radio Shack (Model #HTX212, list $349.99). Power is
45 watts. Their ad on page 160 of April QST does not
indicate if the receive capability is strictly the 2m
ham band or if it has an extended receive capability.

At $350, it should be a pretty good buy when on sale.

--
Bill Sohl K2UNK (Budd lake, New Jersey) (billsohl@planet.net)
This is my opinion and I don't care about what anyone
thinks because this is a personal internet account :-)

Hi Yuzuru

I've been using Logic since version 2 and have tried most others. I find it the most interactive and complete package you can find. They offer a demo copy for about $5 worth trying you can apply it towards the purchase. They have a great deal of additional bells and whistles such as all kinds of reports and configurations for various types of events and logs.

>

Mine came with a 15V recharger, sorry I don't remember the amperage
and I don't have it with me right now.

Does anyone know of an FTP site for the latest version of APRS? I beleive it is ver. 67. It kills me to call the BBS in 410 area code and download at 1200 baud.

Thanks

D.W.Hansen

3823. 154.xxx MHz Frequencies - who uses them?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-22 02:31:18 UTC
From: bsplaine@sr.hp.com
Message-ID: <3ko25m$ocn@canyon.sr.hp.com>
Source record: 250319

I don't know about your location, but here in my county our local Fire D
and police depts use 154.xxx. There are freq's above and below this that
are also used by agencies. Radio Shack's locally have repeater freq's
that they give away with scanner purchases... I have never had a problem
getting one if asked... Some places sell local compilations of freq's of
interest.

Actually, there has been a SEA ACSB repeater in the Los Angeles area for
about a year or two now. With this mode being only supported by
two manufacturers that I know of, the availability of used equipment
is a bit slim, and hams are the cheapes.. er.. most frugal people
on the planet.

While there are some hams in California that are playing with SS
digital systems, (under STA, because the FCC now prohibits
the use of most, if not all SS systems from being used under your
ham license due to the speading techniques and codes now employed)
the main reason that you don't see this for voice is the poor
process gain that most SS systems have. A narrowband signal inside
the SS modulation envelope will result in dropouts of the signal...
not a big problem when your're sending something such as a file,
but a big problem with voice, where there's no "try it again"
protocol.

Once SS systems fully mature, I'm sure the hams will start using it
for non-data modes, but in the meantime, it's a data-only mode.

Someday, the ACSB systems will also be more available. So far,
ACSB has not lived up to it's promise of being this big-time
replacement for FM. It's a good mode, but for some reason or
another, it just hasn't taken off. Hopefully it's use in the
220 MHz band will spur some of this on, I'd sure like to see it.
It's been around for what, 12-15 years, and still somewhat in it's
infancy.

>watts output.

>Rick, WB7UGZ

There's a little-known relationship in Electromagnetics (known as Roach's Law)
that states that one must *never* use a Radio Shack wattmeter to measure
the output of a Radio Shack transmitter. (Is it 01 April yet?)

In article <garryrD5r0sK.BI2@netcom.com>, garryr@netcom.com (Gary Ricketson) writes:
> Lets give a worse case scene , you and your kids are out bicycleing
> in a rurual area , a truck accidently hits one of your kids ,
> there are no phones or houses near by , your kid is dieing ,
> but you have a hf rig , just about the time you are going to give

Oh yes. I carry my HF rig on my bicycle ALL the time, don't you? Yep, got my FT-1000 right up there on the handle bars so I can work bicycle mobile and not have to take my eyes too far off the road to become dangerous... Yeah, right.

The problem with your example is any HF rig you are going to have on a bicycle is inherently going to be of some sort of QRP operation so not all stations are going to hear your signal before they start to operate on your frequency. It is the luck of the draw with such a station. It isn't someone else's fault that the equipment you decide to carry on a bicycle outing isn't the best equipment for the situation or intended use. If you want reliable communications for possible local emergencies, carry a radio intended for local use. 2 meter FM comes to mind... Cell phone also comes to mind.

)I am having the following noise problem with a mobile installation.
)Any suggestions regarding finding or eliminating the problem would
)be greatly appreciated. The car is a 1991 Isuzu Trooper and the
)rig is a Ten Tec Triton 4, and a Kenwood ts430. The antenna is an
)Outbacker Perth mounted on the spare tire carrier on the rear door.
)
)I get a s5+ static noise while the engine is running.
)It goes away when the antenna is disconnected.

Noise is entering through the antenna, not the power cord. Not unexpected.

)It does NOT change pitch or volume with load or RPM.

Then it is not likely related to ignition. Your ignition system would sound
different at different speeds.

)I have grounded the hood, engine, rear door, exhaust, and radio.
)I have not received interference from passing vehicles.
)
)It seems that the noise is related to the ignition system
)and i am checking with Isuzu regarding resistor wires or
)shielded wires.
)

I suggest you figure out where your fuel pump is. It's probably electric,
and probably in your fuel tank. This is unfortunately very near your
antenna.

Here's a test that works on some vehicles:

- with the car turned off, turn on the radio.
- turn the key to the power on position, but do NOT start
- do you hear the same S5 noise for a few seconds?

Some vehicles enable the electric fuel pump when the power is turned on,
and then if you don't start the car, will kill the pump again. The idea
is to pressurize the fuel line. Nissan vehicles exhibit the above. It's an
easy way to determine when you've tackled the fuel pump noise, as well.

I'll give Ed Hare an unabashed plug here... get the ARRL book, Radio
Frequency Interference, How To Find It and Fix It. It has a very good
section on automobile RFI.

I would be interested in hearing of any experiences people have had with Larsen through-the-glass 440 antennas (or for that matter with any of the Larsen line of through-the-glass antennas). I *do* already have experience with the Antenna Specialist antennas. (Any other brands of 440 induction antennas that people like/hate?)

Thanks.

>plates ARE expensive. good luck.
>
>
When my Dad inquired at DMV about amateur plates, he was given
the wrong information.

I copied the relevant section from the vehicle code and he took it the
next time to show the clerk. Worked great!

By the way, have you seen (in photos or on TV) police cars, busses (?)
etc. with unit IDs on the roof. Dad put his callsign plates on their
motorhome. Then he got some 12" or so black vinyl adhesive letters and
put his call on the ROOF of the motorhome.

He reasons that if it ever gets stolen, or if we really need to find them
on the road, the call will be easily spotted fom the air.

Subject: Timewave DSP 9+ or MFJ DSP filter ?
Newsgroups: rec.radio.amateur.equipment,rec.radio.amateur.misc
Newsgroups: rec.radio.amateur.digital.misc
Summary:
Keywords:
X-Newsreader: TIN [version 1.2 PL2 [VAX/VMS]]

I am planning on buying a DSP filter for use mainly with QRP CW.
I will get a rig capable of ssb in the near future.
data mode (rtty, amtor, etc) probably won't do for a while.

which one do you recommend that I buy ? the Timewave DSP 9+
cost $200, the MFJ DSP cost $220.

the MFJ seems to have a lot more features than the Timewave.
and MFJ got good reviews about it noise reduction features.
how good is the Timewave unit in reducing white noise, and
the crashing noise I have been hearing lately on 40M cw ?

also what does the Timewave DSP 59+ do over the 9+ except for
being a knob happy ham's delight ?

For owners of these units, I'd like to get your comment about
your likes and dislikes.

please email replies if possible
thanks

I noticed that the Kenwood TH-79A/D's and TH-28A's have
the dreaded "...complies with part 15 of the FCC rules..."
sticker on them. Is this because of the computing devices
in them? If so, then would not all microprocessor controlled
radios necissitate this sticker? I was under the impression
that we were under soley part 97. Maybe I am wrong, some
one set me straight and explain this one please.

Thanks for your time!

Mr. Jay Hoffman, KA5OST, who is a friend of mine and a long time Radio Shack manager asked me to post his comments and a copy of the comments made to him by Mr. Gerald Schmitt. Jay's compuserve address is plainly shown below. Please correspond with him if you have any other questions.
****

Return-Path: <74056.1524@compuserve.com>
Date: 21 Mar 95 18:52:26 EST
From: "Jay M. Hoffman" <74056.1524@compuserve.com>
To: Joe Jarrett <joejarre@netcom.com>
Subject: Please post

Please post this to rec.radio.amateur.misc

To Whom It May Concern:

Note the dates!

As it turns out, Gerald Schmitt (ggs@aerie.lanl.gov) bought a 2006 on August 26, 1994, during a 0% Interest, No Payment until 1995 promo. He did have it paid for by January 1995 (in the allotted time). His eloquent letter was dated March 11, 1995, about three months after he had paid the bill. He compalained to the credit depatment on March 13, 1995, two days after accusations. Right or wrong, Radio Shack immediatley reversed the $6.97 that he was upset about. I don't expect Mr. Scmitt to apologize but I wanted to set the record straight - he was taken care of immediately and his letters are out of line. Thank you.

Jay M. Hoffman, Radio Shack 01-8085, 2501 W. Parmer Lane, Ste. 100, Austin, TX, 78727-4223, 512-835-9550, FAX 512-835-9509 Radio Amateur KA5OST, Radio Shack since 1979, Senior Manager, Leaders Club Member.

3-21-95:Gerald Scmitt writes:

Mr Hoffman,

A couple of suggestions for you. Get your facts before accusing anyone. I did not let the contract go past the time limit and thus buy myself some interest. I know what the plans and the rules are.

Put a disclaimer on your mail I thought you represented Tandy management and was my flame thrower ever ready. A quick call to corporate HQ led me to the store where you apparently are a sub-manager or sales driod or something. The attitude you display is the very attitude that keeps a lot

of people out of the Shack.

As to your comments about the scanner it is OK but not that special. My old 2004 has a lot less RF leakage and the Icom R-100 puts it in the toilet in performance. I bought it to work pacsats (packet satellites) with but found a better solution in the Icom-281 so I will sell the thing.

I will do you the favor of not forwarding your post further than to the store manager although Fort Worth was interested in seeing it. Oh by the way I am not in the least embarassed but any of my posts.

3-21-95:Gerald Scmitt writes:

I don't know quite who Jay M. Hoffman is but perhaps he would be interested in the facts. I bought the scanner on plan #15 six months 0 interest. During the six months I also purchased some other things. I made it a point to pay every month enough to cover current purchases and pay on the scanner. Many months the statement said nothing due but I always paid anyway. As I understand the RSVP card agreement if it is paid in full each month no interest accrues. Since I paid the last in first out each month plus covering the scanner I should have owed no interest. Instead I was charged interest on the entire ballance.

I wasn't particularly mad about it. I did find the same thing had happened to a number of hams locally by asking questions on the local nets. My post was intended as a "heads up" to buyers intending to take advantage of the 0 percent interest deals. I performed as per the conditions of the credit promotion Tandy Bank did not.

Upon rereading your letter Mr. Hoffman I am now mad. If you are associated with Radio Shack your response is very poor. Perhaps your new slogan should be: "You question us, we get an attitude."

I would greatly appreciate it if anyone could provide me with the Tandy HQ phone number I think it is time to talk to the folks.

> repeater, can the 51R decode the phone number being dialed?
>
> Please let me know how this thing works.
> Thanks,
> Dave

I was told something like this, which was only partially correct. It will decode a whole string of DTMFs, up to (I think) around 20. Unfortunately it only will do this if the string begins with a # and ends with another #. It is part of the message sending part of the radio, which if you look at pages 48-53 of the english part of the manual.
It does make a good diagnostic tool for testing other TT encoders, but if you cannot control the content of the DTMF strings a lot of good the feature is...
Also- remember the radio does a 2-digit routine for the symbols and letters (so 2A is "a", and 2B is "b", etc.) I can see this being troublesome for some strings that mix all 16 tone pairs.

So to the second question- not likely. Unless your repeater a)passes touchtones (I think I know about 3 left in the whole darn country that don't mute 'em!) and b) the sequence starts and ends with a #, you're outta' luck.

Too bad Yaesu didn't make the radio so it decodes anything/everything that It hears, would save me from building/buying another box on my service monitor to decode TTs. Otherwise, luv the radio!

> it required?
>
> 73,
> Bill Rogers KA2CKI

Bill: I used to run one up until I moved to a more "radio friendly" environment 3 years ago. Worked well over 100 countries on it. (I did, at times. use a SMALL linear, an SB-200, and kept the power below the Butternut recommended maximum...And could get through the pile-ups!) It was a fun little antenna to use, but not to construct! I had it mounted at about 25 feet, and used a reconditioned TR-44 rotor I got from C.A.T.S. to turn it.

I too did not have the anti-oxide compound. Mine was up for about 4 years, and never did apply it-- However, that could have yielded some corrosion in a different environment... You can get the stuff from Butternut themselves... They call it "Butter-it's-not." Looks like some kind of mineral oil impregnated with copper filings, but that's just a guess. If you're not in a giant rush, give Butternut a call and get some of the stuff... Don't get carried away and put too much of the stuff on... It's not THAT conductive...

Hope this helped...

The SAM database, which is available on 3.5 inch diskette as well as
CD has a county cross referance as an additional option. I won it
as a door prize at a local club meeting, so I dont know how much
they get for it. BTW, the diskette version comes on about 15
1.4M diskettes.

Newsgroups: rec.radio.amateur.misc
From: brian.carling@acenet.com

GR> Well I personally am glad that this petition was filed.
GR>I hope it gets accepted.

Don't hold your breth OM! Pigs may fly also!

GR> Some may not know what has led up to this , a station in
GR>Main K1MAN , Ted Baxter has been creating alot of trouble
GR>for hundreds of hams , by playing loop tapes of very quest-
GR>ionable content ,(not ham related) he plays them several
GR>times a day , with no regard as to if anyone else is on freq.

Anyone who works HF knows about Baxter's bulletins. They are
not any real problem, except for a few hams on 75 meters who
think that they "own" the frequencies he uses.

GR> He dose not respond or seem to hear any one when they try
GR>to tell him the freq is busy ,many beleive he dose listen
GR>but if he dose he ignores what he hears.

This has nothing to do with prescripptions Gary!

If you had a
GR>emergency he dose not aknowledge "breaks" or anyone.

If you have an emergency, there are 10 million other HF frequencies
you can use to call for help. This is an abserd argument!

GR> He uses the excuse W1AW dose it so can I. Right now tech-
GR>nically I guess it is legal to broadcast one way bullitons.
GR> His abuse of this has led many to realize that if Baxter
GR>can do it what is to stop more from doing it ? ...in fact
GR>I have heard him encourage the idea that more hams start
GR>doing this , is this what we want on HF ? a bunch of ???
GR> playing loop tapes all day and all night ...?

Why not? It will be far more interesting than all the dops
who compere their linyers and overdrive processors all
evening because they have no lyfe!

GR> It is unfortunate that a station like w1aw will also have
GR>to stop the bullitons and cw practice ,

Again, don't hold your breath for that to happen just because
a few grumblers start trying to cause a fuss.

but if one can do
GR>it another will want to and then another and so on...
GR> W1AW or any one could continue operateing , but they
GR>would have to start makeing the cw practice and bullitons
GR> A 2 way deal ,or perhaps even a "net" say the W1AW
GR>announcement net ,

Or maybe the DOn Simpson Net?

take checkins from around the country
GR>then make the ARRL anouncements ,stations could relay ,
GR>these announcements to parts of the country that could
GR>not hear W1AW , isn't that what the American Radio Relay
GR>League used to be about ?.

You are topic-drifting badly here OM!
Check your B+ to the VFO!

..this could also be done on
GR>CW , makeing it 2 way would make it something other
GR>hams could participate in , it would be excellent practice.
GR> A written record could be kept and posted in QST to
GR>check copy..There are a lot of ways W1aw will be able
GR> to continue announceing news if they use a little
GR> imagination ,

Ah yes, after you and Mr. Simpson force 'em all to shut down?
Don't worry, it will not happen!

and yes even Ted Baxter could continue
GR> his nonsense , if he can find another station to
GR> "talk to" but the one way broadcasts need to stop.

Not according to the FCC or the Constitution.

GR> Thats all for now, also I thank W5IY for getting
GR>the petetion started , and KO4TA , and many others
GR> for the hard work they are putting in toward makeing
GR>a needed change.

They are wasting vast amounts of money time and energy with this nonsense, Gary.

The following is an equivalent scale which was based on a manual
that I receiver from SESC some years ago. It has a glossary,
text and other assorted heaps of information.
I was able to obtain these free of charge from SESC, but with
present budget cutbacks, it may no longer be free.
I hope the following info helps.
Regards to all, Lester

SOLAR EQUIVALENT SCALE

Emarit,

All Amateur radios that have a receiver that operates at over 30 MHz are subject to Part 15 rules. Now if you build your own receiver you do not need to pass Part 15 per say, but a manufacturered radio does. Any Amateur radio that operates 30 Mhz and below, does not need to be Type Accepted, only the HF amplifiers are Type Accepted below 30 MHz. Part 97 applies to
all transmitters HF and VHF and above as the FCC does not check the transmitter at all. Generally the 30 MHz and up receivers are tested under the scanning receivers section of Part 15.

For more on Part 15 you will need to get a copy of the Code of Federal Regulations which contains FCC rule Part 15.

Source record: 250256

Any wise avionics techs out there that worked AN/ARC-27 UHF comm radios when they were in the US Air Force? I acquired a very clean one with all accessories recently and have been trying to restore it to specs. My problem is in the transmitter tuning tracking. According to "Janes Mil. Com.", these radios were developed in the late 40's and were still around in the early 70's. The mechanical tuning and freq. presets are a delight to watch in action!

: and cons of various beams;

IMHO

: Mosley,

Built like a battleship, by far the most robust mechanical design of the bunch. Small company, sometimes customer service is bad. Good antenna designs and performance (if they send you the correct parts). Designs geared more towards gain than pattern. I have the Mosley PRO-96, very nice antenna. Having a gain antenna on the WARC bands is great!

: Hy-Gain,

Pretty good mechanical design (not great). Good electrical designs but a lot of $$$ to get a antenna with WARC. I have a used TH7DX that will go up later this spring.

: CushCraft

OK electrical designs, pretty bad mechanical designs. They mount the elements to the boom with a ubolt the goes through the element. Mosley does the same thing but uses double wall tubing at that point, Cushcraft uses only single wall .058 tubing at that point. At just about the point where you get the element tight on the boom the tubing starts to deform in the center of the element. But I've had a A3 on a small tower for 3 years and its still in one piece (we have heavy winds here in CO).

: and others.

You might want to check out the Force 12 C3 antenna. It looks kind of interesting but I don't know much about it.

Subject: Your append to INFOHAMS DIGEST (IBMARC) at 16:32:27 on 95/03/17

Re: Cliff Stoll writes about the net, CB and ham radio

Leigh,

I agree with your assessment of the net in general. It is a very large database of information and opinions. With that large a cross-section we get some bad apples per se.

I don't want to start an argument, but I would like to briefly state some of the reasons that I enjoy HF contesting. I have a pretty meager station and am fired by a competitive spirit to improve both my station's capabilities and my own. I currently use a Ten-Tec Omni-D into a Butternut HF6V vertical and a simple computer to do my logging.

By operating over a 24 hour or longer period with a variety of stations on the air contests provide a unique opportunity to watch and participate in changing propagation patterns. I have learned a lot over the past two years I have had my extra playing around with contesting about when I can expect the band to be open and where. Listening to 10m scatter come and go. Listening to the skip distance change as the sun's energy excites (or not) the ionosphere. The fluttery sound of the East Europeans coming in over the poles. The list goes on. I get to make real comparisons of how my signal gets out based on tweaks I make to the system. I have so much more to learn.

My code speed is enhanced every time I operate or listen to a CW contest. I grant that the exchanges are VERY repetitive. They are filled with the same "markers" that we all know from typical DX contacts; 599, QHT, name hr is, etc. I have overcome my fear of jumping in and responding to a station sending a bit beyond my

ability (with a straight key).

My operating time is limited being the father of a young family. Contests allow me to schedule time to be on the air and know that others from all over will be on as well. Pileups in contests tend to be somewhat less unruly than many of the packet spotted DX pileups I have run into. I get my ragchew fix usually operating CW in the novice and general portions of 40m on the occasional evening.

I am a RACES station and find that as mentioned earlier that contests keep many of my operating skills improving. Aside from propagation, I become very familiar with how to make myself best heard in poor circumstances; what phonetics work best, when to call a station, sending my call fast or slow, whether or not to zero beat the station, etc.

I don't expect to change your mind about contesting. I am only sending you this note to tell you that it takes all kinds to keep this service alive, and that there are all kinds of us out there. There are "real people" behind most of the contesters out there, not just point crazy, wide signaled, CQing on more than one band, never QRLing jerks.

Thanks for listening.

From: horak@convex.com
Message-ID: <3kpgej$h6e@eugene.convex.com>
Source record: 250260

There have been several posts on this group about the HTX-202 getting 10 watts on 13.8v. I didn't believe it until I bought one and tried it out for myself. Mine gets 10 watts on 13.8v too! My old Alinco DJ560 still puts out 5 watts in a side by side comparison. A friend across town on simplex confirmed my joy by describing S-meter comparisons of both radio's transmissions. The HTX-202 had a noticeable gain over the DJ560.

After playing with the radio for a few days I can say that I am VERY happy with it. I DID make sure I was getting a brand new one from the Shack before I bought it!

There are contest free zones. They're called WARC bands. I wonder why many nets
don't move there. The regulars would never feel compelled to jam the
contesters then. This hobby is unique in it's appeal to many types;
some don't care much for SSTV; some don't do phone; some don't do CW. There's
a lot of room for us all.

Dave,

This filter works reasonably well, the only problem being, that
it will handle even a power of 5W only for fairly short transmissions.

A company here just developed a special high power version, which is
guaranteed to handle up to 200W coutinuous output.

the price is only 89 US$ and I am quite happy to take your order
(pre-paid)

3868. World-wide contest this weekend...Try it!

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-22 16:11:58 UTC
From: tigger@prairienet.org
Message-ID: <3kpi8e$rh9@vixen.cso.uiuc.edu>
Source record: 250265

Hi, all-

With all the discussion that's been going on about contesting, I thought I'd point out that there will be a Biggie this weekend. It's sponsored by CQ magazine, and it's the WPX SSB contest.

Everybody can work everybody, with a caveat. Here are the rules, in a nutshell. I'd suggest that if you're seriously interested, read the complete rules in one of the big ham magazines.

The object is to get as many points as possible. This is done by exchanging an RST report (usually 59-a seperate issue) and a sequential serial number. Example: your first contact in the contest would be "59 001", your second contact in the contest would be "59 002", etc.

You get points by exchanging information with as many hams as possible. Note that you get ZERO points for contacting somebody in your own country. However, the multiplier in this contest is the number of different prefixes you get. So, if you're in the US, and you talk to NX0A, you don't get any points for that QSO, but NX0 is a pretty unique prefix, so that counts as a multiplier.

Your final score is a combination of QSO points multiplied by the number of different prefixes you contact. So, if you make a hundred QSO's and you get 50 different prefixes, you get a certain score.

Please note the scoring is slightly wierd for this one. One QSO is not worth ONE point.

Stations on a different continent are worth 3 points.

Stations on the same continent as you, but a different country are worth 2 points.

Stations in the same country as you are ZERO points, but may be worked for multiplier credit.

Also note that if you make a QSO on 40 meters or lower, point values DOUBLE.

Like I said, this is the Reader's Digest version of the rules. If you want to try it, read the rules in their entirety first!

I encourage everybody to get in this weekend and give it a try. Who knows, you might like it!

Take care, and good luck this weekend to all who enter.

73,

Sean

>will this work out of the package (without mods)? I don't mind
>spending some time improving it but I don't want any BIG surprises.
>Is it worth the $149? Please share your experiences.

David, I built the RAmsey 2 meter rig. It needed to be modified
to be clean, and some of the parts in the kit were out of standard,
the offset crystals, and others missing, some resistors. If you
just want a radio, buy something commercial. If you want a challenge
to your troubleshooting and design skills, buy the Ramsey. Either
way you can wind up with a working radio. Would I do it again for
$150? No, but that's because I'd rather modify a commercial radio
than attempt to get one that's *never* worked before working
properly, and I can buy all the old GE or Motorola rigs I want
for $50. You have fewer options at 222 MHz, so the Ramsey may
be a better deal for you.

Message-ID: <3kplau$20c@ecom3.ecn.bgu.edu>
Source record: 250268

I got this information from a private response, and it seems to work.
If you push the function key, then the [call] button, you get the little
telephone icon on the display. Then push the function key for 1/2
second, until the radio beeps, then push the number 9. the radio will
sit there happy as can be decoding any DTMF tones it hears.

Now, one thing that confuses me is that I can monitor a frequency which
has a lot of DTMF activity, and I am always recieving a DTMF 'F'.
No, it isn't a two tone series creating the 'F', it is a single tone
which the radio is calling an F.
Anyone know what this is? I am assuming it is a special key used by the
equipment, and not a standard DTMF tone. Maybe I am wrong.
Are there more than just the 12 DTMF tones on a telephone?
(oh, and the A, B, C, D which the Yaesu is capable of)

Good advice, Mike, but "which F?" might be worth pointing out. The
234/F is recognizable as the length of a quarterwave (vertical) element.
The (1/4 * L) * (0.95) is a formula for radials under a groundplane, so
I'll bet the F in your second equation ought to be an L, for wavelength,
as Mike probably meant. Note that the Odd.Number just means that you may
use a single piece of wire to satisfy the needs of several frequencies.
That is, The counterpoise for 80 meters works for 15 meters, as well; a

Good luck; hope this helps you, Erik.

Attending the 1995 Dayton Hamvention? Then don't miss out on PACK*BASH!

What?
A new event for the digitally-inclined ham, featuring:
* Buffet dinner (with cash bar)
* Nationally-known speaker holding forth on a current topic
* Prize raffle
* TAPR special interest group meetings
* "Bird of a Feather" gatherings

When?
Friday evening, April 28, 1995
Dinner starts at 7:00 pm
Speaker at 7:45
Meetings to begin after the speaker

Where?
TJ's Restaurant
2462 Dryden Road, Dayton
(Dryden Road exit, I75 -- across from the Holiday Inn)

How?
Dinner requires advance registration and payment BY APRIL 24th, 1995.
Seating for dinner only is limited, so register early! The cost is
$16.00 per person, tax and tip included.

All amateurs are welcomed to attend, enjoy the speaker, and
particpate in the meetings, although only those purcashing a dinner
e purcashing a dinner
can eat.

To register, contact:
PACK*BASH
c/o TAPR
8987-309 E. Tanque Verde Road #337
Tucson, AZ 85749-9399

Phone: (817) 383-0000
Fax: (817) 566-2544
Internet: TAPR@TAPR.ORG

Visa/Mastercard Accepted

Who?
PACK*BASH is co-sponsored by TAPR -- Tucson Amateur Packet Radio,
the national leader in digital communication -- and the Miami

Valley FM Association, Dayton's packet radio club.

For further information, contact TAPR, or email packbash@ag9v.ampr.org or BASH@N8ACV.#DAY.OH.USA.NOAM

Doc, I think you need to better inform yourself about the entire situation before posting; right now you appear to be a loose cannon. Mr. Greenspan happens to be general counsel to the FCC, and he is also the unfortunate recipient of a large volume of correspondence from K1MAN regarding the apparent willful and deliberate interference between K1MAN, W1AW, and various well-publicized nets and other amateur radio operators. Let the FCC do some of that enforcement that most of us feel we see far too little of these days!

As an attorney for the government agency which is currently investigating K1MAN's qualifications to continue holding an amateur license, Mr. Greenspan is not only within his right to ask, but is legally required to insist that all communications from K1MAN take place solely through legal counsel. His suggestion to do the same with Ms. Malone stems from the fact that Ms. Malone is on the staff of the Maine Attorney General's office, where other legal action may also be pending.

This is far from being an anti-trust issue. It simply comes down to K1MAN being advised of his legal defense rights so that he can not later claim that he was blindly led into a bad position by the FCC's counsel, should they choose to revoke his amateur license. You probably would never put your amateur license in legal jeopardy in that fashion, but if you did you should get the same warning, very much like the common TV phrase, "Anything you say from this time on can and will be used against you in a court of law."

>
>Is one less hard on the rig than the others?

Full break-in (QSK) allows you to receive between each dot and dash. That way, if the other station wants to interrupt you (i.e., ask for fills, etc.) he/she can do so by pressing the key during your transmission. Semi-break-in can be likened to VOX on a phone transmissions - the rig is shifted into transmit mode and "hangs" there for a certain (adjustable) time period after the last dit or dah. My rig (a Yaesu Ft101e) has semi-break-in, which is FB for getting started. Now that I'm a confirmed CW freak, I would die for full QSK.

Assuming you have solid-state rig (not a t/r relay) I can't see that either would be harder on the rig than the other. Clacking relays wouldn't do it for me, though.

Good luck,

and 73,

>amateurs.

And there are also plenty of general, advanced, and extras who welcome newbies to the ranks of our hobby and service. I agree with Greg that there is a lot of elitism on the bands, and we need to get rid of it if we are going to continue to grow new hams! The no-code ticket is a great way for folks to get into ham radio, work on the repeaters, etc., and upgrade. But we need to encourage them and help them, rather than exclude them. At the same time, though, anyone who is new at ANYTHING - whether it be computers, driving a car, carpentry, plumbing, or ham radio, needs to feel free to ask for help.

3883. Help with 13 WPM

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-22 19:37:17 UTC
From: js024b@uhura.cc.rochester.edu
Message-ID: <1995Mar22.193717.17893@galileo.cc.rochester.edu>
Source record: 250180

Hello everyone,

I passed my Novice and Technician exams 5 years ago and I would like
to upgrade to General (and Advanced). My morse code is very flaky and I
am having a hard time picking it up again. I am using a computer program
which I FTP'd without much success. After thinking it over, I think the
best way for me to pass the 13 WPM exam is to take a CW class. I wouldn't
need the class for the written exams (I passed the General written 5 years
ago but the CSCE has long expired).

Does anybody know if there are classes for the 13WPM exam in the Rochester,NY
area? Any other help would be appreciated.

Thanks.

: oo7@astro.as.utexas.edu

I think that folks gotta realize that contests do not take place more
often than not. Sure, clubs likethe Southwest Slobovia ARC may sponsor a
QSO party most every weekend of the year,
but there are only a few weekends where major contests attract large numbers
of operators.

The masses of rag-chewers have over 300+ days of the year in which to
drone on (or drool on) the air. If one bitches because one can't stand to
talk to their fellow cronies every weekend of the year, then I think they
ought to re-examine their standards of personal utility.

Take a stand! Turn off your radio for a day or so! It won't force your
pacemakers to stop running!

Source record: 250182

drumhell@claudette.nrl.navy.mil (David Drumheller) sez:

DD>call the manufacturer (Antenna Specialists), and they did. The technical
DD>rep said that they had no record of anyone having difficulty installing
DD>the antenna on the make and model of car that they own, and thinks that
DD>the coupling box is inoperative.

DD> Lessons learned: (1) It appears that some of the well-known
DD>manufacturers are willing to work with customers who have purchased a
DD>through-the-glass antenna

I will give kudos to Antenna Specialists because I feel they deserve it.
When I got my antenna it had been removed from another car. In order to be
re-installed I needed the adhesives. I called AS's tech support and told
them that I just got the unit from someone who had removed it from their
car. Without another word they said they'd send me a re-mount kit. Within a
few days it arrived at my door, free of charge. It contained a new metallic
"foot" with the double sided adhesive pad, the plastic brace, cable clips,
a tube of silicon adhesive, and a new adhesive pad for the tuning box. I
also got new instructions, and tuning tips.

DD>installation is correct, but they're unable to resonate the antenna
DD>through the coupling box located in the car interior.

I had this problem too. But we finally got the thing tuned, but it was a
very tight adjustment. You also have to make sure the metal plate from the
shield it either on ground or VERY close to it through the plastic.

Best of luck.

David Horak (horak@convex.com) wrote:
: There have been several posts on this group about the HTX-202
: getting 10 watts on 13.8v. I didn't believe it until I bought
: one and tried it out for myself. Mine gets 10 watts on 13.8v
: too! My old Alinco DJ560 still puts out 5 watts in a side by
: side comparison. A friend across town on simplex confirmed my
: joy by describing S-meter comparisons of both radio's
: transmissions. The HTX-202 had a noticeable gain over the DJ560.

Were you using the same antenna for comparison? 5 watts versus 10
watts would be 3db gain, which would account for about 1/2 an S-unit.
I'm surprised your friend could tell the difference. If you were using
the "stock" rubber ducks on each rig, then there could be additional
differences.

: After playing with the radio for a few days I can say that I am
: VERY happy with it. I DID make sure I was getting a brand new
: one from the Shack before I bought it!

I am also very happy with my HTX-202. I sold my DJ580 and bought the
HTX-202. (I could not see toting around a $400 rig. I'm too clumsy.)

It's around 15 volts, but it's AC, not DC as you might expect. You
can also buy a little motorcycle charger from K-Mart and plug it into
the left cig lighter jack and charge in in a few hours, instead of
overnight. That works fine for me.

I used a discone both times. The only thing I changed was the BNC as I unscrewed it from one radio to the other! My buddy received me at about an S9 using the Alinco and about 10 over S9 using the HTX-202, in his words. This experiment was not meant to be scientific, just to confirm what my watt meter was telling me. No difference was noted in audible quality, obviously, but it was noticeable on his S-meter.

From: wesson@gaul.csd.uwo.ca
Message-ID: <3kq7o4$rei@falcon.ccs.uwo.ca>
Source record: 250189

Does anybody know where I can get information on the radio phones that they use on ships? I have been scrounging around in the library here at university but the information is pretty sparse. I am looking for information on how they work (is it like regular radio)? What's the bandwidth of a radio phone (what frequences can they use? Are they the same frequences the globe around)? What is the error rate, are they any good for data transmission? What's the cost of a unit, and what is the cost of usage?

FYI, I am doing a paper for my communications course on satellite vs. cellular vs. other wireless technologies. I am trying to compare them on coverage, error rate, security and cost, plus the probability of implementation (that's more for the satellite stuff).

Thanks in advance.

I just finished talking with the chief of security at the zoo, and he
advised he knew of no such policy. However I spoke with 2 individuals
yesterday at the zoo, and they were quick to reply that radios were not
allowed. After talking with the security chief today, he was very open to
ham bringing their radios in, and I emphasised how important it could be
if disaster struck while a ham was in the park, earthquake, etc. We could
help out with communications in emergency situations. More to follow
after I speak with him again. I will also be talking with security at the
wild animal park, and 6 flags.

Hi Mark,
Rather than saying the `letters were adopted' the correct entry
should read `The prosign ...---... was adopted...''. That prosign
is represented by: ___
SOS

where the bar indicates no spaces between the `letters'. We use
letters as a close representation of prosigns. Other prosigns
that contain a `bar' are:

___ ___ __ __ __ __ __
XXX TTT AR BT SK (or VA) KN

We have prosigns without bars, too, so that a correct space is sent
between the letters.

Also, you might want to specify that it was at the Berlin Conference
of 1906 in which that distress prosign was adopted, but not until

the London Conference of 1912 that an international distress frequency
was was agreed upon (500 kc).

73 (another prosign) from Hawaii,
Jeff NH6IL

IB>Anybody have any thing to report about the Radio Shack
IB>2m handhelds? Good, bad, indifferent, etc? I'm
IB>contemplating a low-end (not much $$) purchase.

Buying the RS HTX202 will give you the best reciever spec in the handhelds according to all three of the major ham magazines. I had three of them and not even a hiccup untill one was stolen. The only negative is they can not be modified to work anywhere execpt 144-148 megs. Don' even try it unless you intend to purchase a new radio. The best price that you will normally find is 199.99 when they are on sale.

The I had three comment really means that now I have 2 one was stolen in a burgalery and I am waiting for the sale to replace it.

Topics: Young Ham of the Year is being sought...
Hiram Percy Maxim Memorial Award
Where were we?

Due to the situation with the Westlink news report (a former amateur informational service based in California), Newsline has resumed responsibilities of the Young Ham of the Year Award.The Young Ham of the Year Award (or YHOTY for short) was conceived back in 1985 by, then the editor-in-chief of the Westlink Report, Bill Pasternak, WA6ITF. He came up with the idea back then when the nominations of the Dayton Amateur Radio Association Ham of the year award was announced. Mr. Pasternak hoped that the YHOTY award will highlight the accomplishments of the nation's many young radio hobbyists, and to encourage the entry of more young people into the exciting hobby of Amateur Radio. Because Newsline will assume the duties of the YHOTY award, this important program will remain uninterrupted in the years to come, for other young hams to enjoy, and spread the meaning of international goodwill to others.
The 1995 "Young Ham of the Year Award" is officially open to any U.S. licensed radio amateur age 18 or younger. For more information on the YHOTY award, such as nomination forms and rules, please contact send a letter to 1995 Young Ham of the Year Award, c/o Newsline, 28197 Robin Avenue, Saugus, California 91350. or send Electronic mail to billwa6itf@aol.com. Nomination forms must be turned in by June 30, 1995. This year's winner will receive his or her award at the Huntsville, Alabama, hamfest on the weekend of August 18-19, 1995. CQ magazine will be providing the winner with a VIP tour of Spacecamp / Huntsville and NASA's Marshall Space Flight Center.
Along with NEWSLINE, and Yaesu USA, CQ Magazine has also announced that they too will be co-sponsoring the YHOTY award.
"We view this award as an excellent opportunity to encourage young people in amateur radio," says Publisher Richard Ross, K2MGA, "and to show them that you don't have to be an 'old-timer' to make a significant contribution to the hobby. We are pleased to be able to add our support to keeping this award alive."
Past recipients of the Young Ham of the Year award include Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986); David Rosenman, KA9PMK, of Muncie, Indiana (1987); Jonathan Binstock, NK3D, of Potomac, Maryland (1988); Erin McGinnis, KAOWTE, of Topeka, Kansas (1989); Mary Alestra, KB2IGG, of Staten Island, New York (1990); Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991); Angela (Angie) Fischer,

KBOHXY, also of St. Louis (1992); Kevin Boudreaux, N5XMH, of New Orleans Louisiana (1993) and Allison Zettwoch, KD4CKP of Louisville Ky. (1994). Special Thanks to Bill Pasternak WA6ITF, Richard Moseson NW2L, and NEWSLINE and CQ Magazine for the information.

Hiram Percy Maxim Memorial Award

This award was presented since 1936, whereas the Section Managers send in their nominations and an award panel chooses the awardee. The Hiram Percy Maxim Memorial Award is to be given annually to a licensed radio amateur under the age of 21, whose accomplishments and contributions are of the most exemplary nature within the framework of Amateur Radio activities, including (but not limited to) the following:
Participation or leadership in organizational affairs at the local or national level.
Technical Achievement.
Operating record.
Recruitment and training of new amateurs.
Public relations activities.
Nominations should document as thoroughly as possible the Amateur Radio achievements and contributions of the nominee during the previous calender year. Additional information concerning the character of the nominee should be as complete as possible. This years awardee will receive a monetary award, along with an engraved plaque, and travel and accommodations expenses to enable the awardee to attend the ARRL convention at which when the award will be formally be made. "The Hiram Percy Maxim Memorial Award is intended to provide encouragement, and a tangible award, for outstanding young amateurs. It should also provide an opportunity for Amateur Radio, and its many benefits for young people, to be brought to the attention of the public." Nominations from Section Managers must be received at ARRL HQ by March 31, 1995.

Special Thanks to Rosalie White WA1STO (and congratulations), Rick Palm K1CE and the ARRL staff for their cooperation.

Where were we?

Due to the situation here at school; It was becoming more and more challenging sending out Youthnet NEWS bulletins. Also due to my present location, it is also difficult to send Youthnet NEWS bulletins via packet. There is good news though to those on the Internet who are using Web browsing programs such as mosaic, Netscape, or WinWeb. Youthnet NEWS will be readily available via any of those programs soon. We'll inform you when it becomes officially available. Also, the next Youthnet NEWS topic will be on the upcoming Dayton Hamvention.

Youthnet NEWS is an amateur radio
informational service for the young
radio amateur operator.

3902. Help me ground my station - PLEASE

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-23 01:01:48 UTC
From: mikef@microtech.com
Message-ID: <3kqh9s$iig@kadath.zeitgeist.net>
Source record: 250198

I've just set up a borrowed TS-120 to try my hand at HF but I'm don't know how to properly ground the system. Here is my situation. I've got the radio at my office, on the second floor. My antenna is a dipole on the roof.

The first problem is what to use as a ground point. We've got a 1" copper pipe running from the drain on our water heater into a wall to the unkown. I would need about 30' to the pipe, then the pipe runs atleast another 50' before going into the wall(ground?). Another option would be to go to a copper ground rod that has been sunk through our concrete floor. This would require a run of about 60' from the radio. Is there anything else in a building that would make a decent HF ground? Maybe the wiring conduit?

Once I've established the ground point, how do I make a good connection? As I've already discussed, my minimum run will be about 30'. Do I invest in some RG-8 and just use the shield, or is there something else that is better and cheaper that I can use?

Lastly, I assume that the radio and the power supply should both be connected to the same ground point, but what about the sheild of the antenna.

I appreciate any help the collective wisdom of the net can provide.

Any folks out there with low band experience?

My 51.8 MHz repeater will soon be going up to a windy (100 mph) site,
and I would like to find a gain antenna that will withstand the
environmental (wind, but little icing).

Right now I'm using Diamond's 6 dB 6 meter antenna, and this thing would
never withstand the wind up on a hill. Oh, cost is not very important,
it is better to be penny wise than pound foolish.

This weeks Spectrum will feature a visit from Arnie Coro co2kk of radio Havana Cuba's Dxers Unlimited. To our knowledge this will be the first time that a communications magazine program has ever interviewed him. We will take a look at the communications scene in Cuba and take calls from listeners.

Spectrum airs on wwcr on a frequency of 5.065Mhz. The program in addition airs on the Omega Radio Network on Telstar 302 on transponder 21 at a subcarrier of 5.8. Spectrum airs at 0300utc Sunday. That's 10pm est on Saturday evenings in North America.

Spectrum The Communications Magazine You Read With Your Ears!
Internet: spectrum@orn.com Genie: Spectrumshow@genie.geis.com

: In article <2a6.8610.545@acenet.com> brian.carling@acenet.com (Brian Carling)
: writes:

: >LW>Do you want to know the full scoop on Fred Maia's new petition to
: >LW>the FCC? Are you curious about the new vanity callsign program? How
: >LW>does Electronic Filing work? Want Fred's opinion on these or other topics;
: >LW>then tune into the Ham Radio & More show

: >Can't! It's not on in DC!
: >---

: Why doesn't Len Winkler go for full coverage and buy air time from K1MAN,
: W1AW, or KO4TA?

He is waiting for the rules to change so he can buy air time on all those
dead two meter repeaters in all the major markets. He is looking for that
good quality FM broadcast audio. Since there are so many dead or dying
private repeaters out there, he can get his air time for less than a dime.

The impact of this petition on the amateur radio service above 30 MHz
will be far greater than any horse race on 75 meters. Make Money Fast.

How did the difference between 5 and 10 watts change the s meter reading so much??

The last time I checked that is only a 3db gain.

How hot does the HT 202 get as it means it is dissapating 15 watts input to the finals?

Message-ID: <4f6_9503242256@woodybbs.com>
Source record: 250131

KN>My rig (a TS850) gives me the choice of using "Full Breakin",
>"Semi-Breakin", or no break-in at all by just putting the rig in
>send mode.

KN>How does one decide which of these to use and when?

KN>Is one less hard on the rig than the others?

It's really up to the operator to decide which he 'feels' most
comfortable with...

IF YOU ARE AN INEXPERIENCED OPERATOR... still working on getting a
really good handle on copying CW, I'd suggest SEMI-break-in, with a
fairly long DELAY... This will allow you to switch from RX to TX
automatically and still have the transmitter stay in the TX mode while
you send each character... dropping out only when you pause long enough
for the DELAY timeout time to expire (1-2 seconds). This mode provides
some benefits... no unwanted interference received while transmitting,
'calm' and quiet sending... and some drawbacks... can't hear what's
going on on-frequency while you're transmitting.

IF YOU ARE AN EXPERIENCED OPERATOR and want to 'monitor' the frequency
WHILE you are transmitting (e.g. to keep track of activity ON frequency,
such as QRM or other activity), then FULL break-in should be considered.
Full break-in allows you to hear just about everything going on ON your
RECEIVE frequency while you transmit. This permits you to stop sending
if the other op needs to get your attention (he just starts sending to
you or hits a DAH or a DIT a couple of times to get your attention WHILE
you send)... and it allows you to know when/if a tuner-upper comes on
frequency and starts making QRM for your signal... you can stop sending
until the QRM disappears. Full break-in (QSK) also allows two ops to
converse as if they were on the phone... one sends a question and then
just pauses (not having to send 'BK' or 'K') so the other op can send
his reply... When working DX (especially split-frequency DXing), QSK is
alomst a must, because you have to know when to send and when to
transmit.. to get your call in JUST at the right time so the DX station
will hear YOU instead of the other guy. QSK allows you to know when to
STOP sending too, because even while you're sending, you can monitor for
the signal of the DX station and STOP sending as soon as you hear him
come back to you or the other guy.

If you are a beginner, QSK cna be a bit disconcerting, but once you get
the 'hang' of using it.. and the experience to use it without letting
the stuff you're hearing WHILE sending get in your way, you'll
(probably) LOVE it...I certainly do.

Just a little bit of advice....
Put everyting you have away....
If you still remember the letters, even a 2WPM your home free.

Just lit sten to the code at 22 WPM from cassette tapes with an
15 to 18 word per minute spacking....

Or if you can get the tapes that start you out at 22 WPM with 5 WPM spacing
and then move up to 10 then to 15 you'll pass that test in one week...

>I've just set up a borrowed TS-120 to try my hand at HF but I'm don't
>know how to properly ground the system.

Michael:

There are two reasons for grounding your rig, and each has
different requirements.

First, the rig should be grounded for safety reasons. This
includes lightning strikes, internal equipment failures, etc.
A ground for this purpose should be able to carry reasonable
current, but length (within reason) is relatively unimportant.
It is difficult to predict the capacity that might be required
to dissipate a direct lightning strike, but a 200 watt rig
should be safe for other failures with a 14 to 16 gauge ground
wire. Any internal failure should blow the fuse in the rig
long before this gauge wire overheats.

The second reason for grounding the rig has to do with RF.
Many antennas present a reactive load to the rig, and a short,
solid ground connection will prevent RF from "floating" on the
equipment. Additionally, some operators claim that a good
RF ground improves EIRP. I have not personally found the latter
to be true, but my antennas have always been horizontal, i.e.
dipoles and yagis. Perhaps the situation changes when using
1/4 wave or other types of verticals.

At any rate, the requirements for an RF ground cannot be
satisfied with a connection 30 feet long unless you're
operating on a very low frequency (well below 160M). Even
if the water heater was next to your rig, the length of water
pipe (assuming it's copper) between the heater and an outside
ground would probably introduce an unacceptable length.

Therefore, IMHO, you will need to satisfy yourself with
the fact that grounding is for safety purposes only. This
could mean that you may have to resort to other means in
order to eliminate any RF that appears in the shack.

Assuming you are feeding the dipole with coax, elimination
of RF in the shack will require that the antenna exhibit
a low VSWR on all frequencies of operation. This offers
the added advantage, of course, of minimizing feedline losses.
Also, a balun at the feedpoint might prove beneficial, but
it should not be deployed as a substitute for low VSWR.

Baluns operated within high-VSWR systems can actually worsen system balance and efficiency.

There are other techniques available if you can feed the dipole with ladder line, but considering that the rig is borrowed and the installation may be temporary, these may not be appropriate.

In the event you decide on a permanent installation, ladder line can greatly simplify a multiband installation. A little homebrew is required, but I have a technique that can enable operation on all HF bands at high efficiency, regardless of VSWR, and with no RF in the shack. It does not require specific lengths for either the feedline or antenna, nor does it require an RF ground. In a worst-case scenario, I once used the technique to feed 1KW to a 50' total length dipole on 160M. Signal reports were exceptional, particularly when compared to other feed methods. Again, the system absolutely requires a ladder line feeder, so it's not for everyone. E-mail me if you're interested.

Hope this helps - 73,

Jack WB3U

Hi Jerry,
I have the TimeWave 59+ but I have never used the MFJ to be able to make a direct comparison. My use is mainly on CW, and the unit is superb for that mode. Yes, it reduces both "white noise" and static crashes.

The "extra knobs" are what make the 59+. In the CW mode they give you the ability to set the desired width and the desired "center frequency". I prefer to listen to a low pitch CW note, so I set the 59+ at a center frequency of perhaps 500Hz, and adjust the width as appropriate. Another operator may prefer a higher CW note.

Actually, the "center freq" control allows you to use the 59+ as a "mini-VFO" if you wish. Open up the filters wide on your rig in a busy part of the band, set width at a narrow value, say 50 HZ, then use the center freq control to step through the signals. Kinda neat in contests.

I have it, my first radio (ownly radio), Have the TSP plan and I have used it a few times as well (transmit audio went out a couple of times) I find it to be verry durable (droped it from a height of 6' a couple of times) It will take Liking and keep on.... talkin. I plan to renew the TSP when it expires. If you get it, get the TSP too. I found that it comes with alot of featchurs that the other brands charge extra for, and for alot less money too. I also use it for my base radio and for Packet. A nice assory to get with it the lapell speaker mike.

I've never had any complaints about it, I've takin on trips several times, I'm going to tell you about a trip that stikes out of my mind the most.

One time I was at a California state park, that iss ontop of a mountain, at the California, Origon Border, I manage to key a repeater from there that the book said was on Mt. Hood. (I'm not shure if the repeater I keyed was in Mt. Hood or not, I need to go back there and try again), I was using the HTX-202 with a homebrew 1/4 wave mag mount ant. on my car's roof. Latter that day After Lunch, In happy camp I was scanning the band and came accross a interesting conversation (I ownly heard one side), I heard a staion calling a station saying "Ok the american station calling from (I forget the state) go ahead this is (forget the call) The persons voice had a real thick accent, and the call he was using was not a US call, and by judging the subject matter of the conversation I think I was picking up Mir (its just a guest). Every one else in the car got a Kick from listing to it; I manged to receive it for about 5min. I guess I was in the right place at the right time. (still the same ant. from previous).

REVIEW: BUILD YOUR OWN SHORTWAVE ANTENNAS, 2nd Ed. Andrew Yoder TAB/McGraw-Hill

As a radio amateur I have always been interested in antennas because without one, the best radio equipment is useless. Given the sophisticated state-of-the-art in receivers and transcievers, it seems that the only area left for experimentation and practical construction projects is the antenna system.

Andrew Yoder (author of PIRATE RADIO, also published by TAB/McGraw-Hill) gives us lots of good hands-on information for the beginner and veteran alike. In the brief introduction, Yoder gives us some shortwave basics, discusses propagation and even chides the F.C.C. by reprinting a news release written by them in which they display an incredibly erroneous description of radio propagation.

The serious portion of the book begins with beginner and makeshift antennas and continues with basic discussions on horizontal, vertical antennas and transmission lines. Now equipped with some fundamental knowledge we can start to construct some antennas. Author Yoder gives some essential info on construction, tools, materials and practices, masts and supports and, most important, emphasizes safety measures, grounding and lightning protection - probably the most important considerations when discussing antennas.

Also covered are the standard half-wave dipole, end-fed Zepp, loops, rhombics, inverted vees and highly directional antennas. In addition, for those with limited space, there is a chapter on indoor, limited space and portable antenna systems that perform quite well given the limitations. Finally, there's a discussion on radio interference. The appendices include a chart of wire lengths for half-wave antennas, a bibliography and a list of suppliers.

I enjoyed reading Andy Yoder's BUILD YOUR OWN SHORTWAVE ANTENNAS and would definitely recommend it as a valuable addition to any radio enthusiasts bookshelf.

> The second reason for grounding the rig has to do with RF.

I have heard that a proper RF ground should employ a large copper
braid to maximize conductive surface area. I am going
to buy some braid for this purpose. The ground connection on
my rig is a little butterfly nut on a 3/32" threaded shaft
(Kenwood TS450SAT). Most rigs I've seen have similar
little ground connections. Won't this small connector choke the ability
of the braid to carry RF to some extent? If so, then the braid must
be connected to the chassis? In other words, can I get an effective
RF ground by connecting only a few strands of the braid to the
grounding post on my rig?

> solid ground connection will prevent RF from "floating" on the
> equipment.

The bad thing about RF in my shack is that rig doesn't funtion
properly. Strange things happen that indicate that its little
brain is fried. The computer and TNC also act up. I run a Windom
dipole fed with coax into a 6:1 balun. When I operate on bands with
a low VSWR, everything works great. The trouble starts when I
try to operate using the antenna tuner.

> the system absolutely requires a ladder line feeder, so it's
> not for everyone. E-mail me if you're interested.
>

I am interested...please e-mail me the info. I've always tried
to avoid ladder line, but now that I'm having trouble with coax
I'm willing to give it a try.

: (what frequences can they use? Are they the same frequences the globe around)?
: What is the error rate, are they any good for data transmission? What's the
: cost of a unit, and what is the cost of usage?

To the best of my knowledge, most ship/shore communications are now on the
INMARSAT satellite system. It used to be that only INMARSAT-A was
available for voice, but now digital INMARSAT B and M systems are
available. Digital systems lower the price a bit. I'm not sure of
bandwidth, A systems are analog voice, and the others are digital
streams.

If you are a small ship, such as cargo, or passenger without much use for
voice, you can also use INMARSAT-C, data only (and VERY SLOW, 600 baud).
The advantage is very low cost, and low bandwidth. All systems, I think,
include a GPS receiver, for immediately sending a distress signal, with
location.

There are four satellites, in four ocean regions: Atlantic East, Atlantic
West, Pacific, Indian. They cover 95% of the earths surface. THey are
also heavily used for land applications.

:
: FYI, I am doing a paper for my communications course on satellite vs. cellular
: vs. other wireless technologies. I am trying to compare them on coverage,
: error rate, security and cost, plus the probability of implementation (that's
: more for the satellite stuff).
:

Hopefully this gives you some idea to turn to for more reference. You may
be able to get rates by calling COMSAT in the US, I don't have the address
or phone number handy. I am a C user for disaster response by the Red
Cross, we also use A systems around the world.

You can try the Edison Radio Amateurs Association. They have a net on their repeater (145.33) every Thursday (8 or 9PM I forget).

There's the Motor City Radio Club, you can try to contact Bob, K3UWO, on the Edison repeater. He's usually there at 10:15PM for the Southeastern Michigan Traffic Net.

In Ann Arbor, you can try the ARROW club. Get on the 146.96 repeater.

We have no ham stores within a couple of j hundred miles of here. I think the nearest might be in the DFW area -- an eight hour drive. When I was stationed at Moody AFB in south Georgia, the nearest stores that handled ham equipment were in Atlanta (240 miles) or Orlando (AES, 200 miles). So I agree -- we have very few local ham stores any more. Washington DC is NOT a good representation of the country as a whole. (On a LOT of things, but on this in particular!Hehe)

>SWR down with his antenna tuner.
>
>Do you get more power out from the arial using an ordinary antenna tuner, or
>is it the tuner that burns up the reflected power?

The antenna tuner (plus feedline acting as a transmission line transformer)
is actually tuning the antenna. Much of the power does radiate, but obviously
the small antenna is less efficient than a larger one, IE the radiation
resistance is really low while the feed impedance is high, and parasitic
losses are high. And equally obviously, feedline losses and tuner circulating
losses are higher than would be the norm for a near full size antenna. Still,
the tuner/feedline combination is resonating the antenna and allowing it to
take power.

A fairly low mounted 40 meter dipole is usually only 40-70% efficient,
and this antenna is probably 20-30% efficient, acting as a voltage probe
antenna. So while not great, it's likely only 3-6 db worse than a typical
amateur installed full size antenna. That's only an S unit, and at HF that's
not usually signifcant unless he's a QRP operator, or trying to be a
"big gun" Dxer. It's probably comparable to a small magnetic loop, like
the multi-hundred dollar Isoloop, in performance, except that antenna
is primarily current driven while this one is voltage driven. The main
concern with this type of antenna is high voltage flashovers in the tuner
or feedline.

Heathkit has not gone belly-up. While they do not produce the kits that they once did, they do still have many parts in stock. They currently sell electronic training courses to tech schools and for home study. They also still sell their "most accurate clock". Sorry I don't have their phone number with me, but they have an 800 number so you could get it from 800 directory assistance.

Yes. Station records are needed to document a change of control operator
and also keep details of Spread Spectrum transmissions. Other than that,
no daily transcript of transmissions is required unless required by the
Engineer In Charge of the FCC local field office.

>infancy.

For amateurs, ACSB has little to offer over ordinary SSB. The pilot tone allows automatic tuning, but hams are used to tuning in SSB signals, so that's not the important advantage to hams that it is for commercial two-way users. And the 2x compandoring has been surpassed as a way of dealing with the noise floor by DSP processing techniques that will work with ordinary SSB.

I suspect ACSB missed it's window of opportunity about 10 years ago and is now a dead horse.

Anything with a computing device needs Part 15 certification (at least for now, the FCC has announced plans to relax that). And of course any scanning receiver that operates above 30 MHz needs Part 15 certification too. Most of them either have a sticker, or a notice in their manual, that says they are in compliance.

In article <3kqh9s$iig@kadath.zeitgeist.net> mikef@microtech.com (Michael A. Fallavollita, Ph.D.) writes:
>I've just set up a borrowed TS-120 to try my hand at HF but I'm don't
>know how to properly ground the system. Here is my situation. I've got
>the radio at my office, on the second floor. My antenna is a dipole on
>the roof.

Unless you need lightning protection, you don't need a ground connection *at all*. You're running a balanced antenna that doesn't need to work against ground. Just make sure you are feeding it balanced, a current balun at the antenna for coax feed (or use ladder line), and don't forget to disconnect everything before a storm.

Gary

---------- Begin of The QRP Clubs List ----------

==========
THE QRP CLUBS LIST The QRP Clubs List
Version 0.97
March 22, 1995
Compiled by Richard Hieber, DL8MFQ/AA8CP.
Email: <sz0026@daphne.rrze.uni-erlangen.de>
Packet: [dl8mfq@db0sif.deu.eu]

~Subject: The contents:

This file contains information about the following QRP clubs:

o 9A-QRP Club
o Arbeitsgemeinschaft CW / Activity Group Telegraphy (AGCW-DL)
o QRP Club ARI
o QRP Amateur Radio Club International (QRP ARCI)
o Benelux-QRP Club
o Grupo-QRP do Brasil
o QRP Club of British Columbia (BC QRP)
o QRP Society of Central Pennsylvania (QSCP)
o Cleveland QRP Amateur Radio Club
o Colorado QRP Club (CQC)
o CW Operators QRP Club
o EA QRP Club
o G-QRP Club (G-QRP-C)
o Italian QRP Club (I QRP)
o JARL QRP Club (JA-QRP)
o MFJ 90's Radio Club
o Michigan QRP Club (MI QRP, M-QRP)
o The QRP Club of New England (NE QRP)
o The QRP Club of Northern California (NorCal QRP)
o NorthEastern Illinois QRP Society (NEIQS)
o The NorthWest QRP Club (NW QRP)
o NorthTexas QRP Club (NorTex, NQC)
o OK QRP Club (from the Czech Republic)
o Oklahoma QRP Club (OK QRP)
o St. Louis QRP Society (SLQS)
o U-QRP Club

o WI QRP Club
o ZS-Algoa QRP Group

The ordering of this list is somewhat arbitrary though it tries to follow the alphabet :-) No weighing is intended.

Two list entries here are somewhat special:

- The "MFJ 90's Radio Club" is focussed on the MFJ 90xx series of QRP transceivers but not affiliated with the company. Rather than being a club it is more a newsletter and its readership.

- The "AGCW-DL" is not a QRP club but rather a CW club. It is in the list because of its strong QRP activites and because there is no dedicated German QRP club.

In addition to all that you'll also find information about defunct clubs and newsletters, ceased activities, 'unofficial' groups and a small paragraph about the world famous INET QRP Club ;-)

Spelling and punctuation tries to follow European standards.

~Subject: The format:

ABBR: Abbreviation
FULL: Full name
PRES: Club President
ADDR: Contact address for membership and info
SINC: In existance since ...
COST: Membership cost (yearly)
NEWS: Club newsletter, name and frequency
NUMB: Current membership numbers (approximately)
MEET: Regular meeting
QNET: QRP nets, 'on the air' meetings
PROJ: Previous and current projects
TEST: Contests, activity periods
AWRD: Awards
COMM: Comments

The NUMB entry is only meant to give a rough indication about how big the club is. The numbers given are not precise and cannot be. The number of active members is not equal to the last issued membership number - some former members are SK now or have left the club. A good indication of active membership numbers is the number of people that subscribe to the club newsletter.

The PROJ entry isn't meant to be a listing of all the building projects that any club member has ever done. Rather it should list all the projects that were designed by a club member, were realized by several others and are available as a circuit diagram, kit or whatever. This entry shows you where household names like 'Epiphyte'

or 'Sierra' originated.

Similar story with the TEST entry: It is not a list of activities the particular club *participates* in, but rather a list of activities that *originate* within the club. There is no space to give details. By supplying the name everybody can see that a special activity exists which will give him the starter to ask for more information.

I would also like to supply information about regular 'on the air' meetings of the clubs (entry QNET). If you know about such activities, please notify me; my address is at the end of this file.

In this revision of the QRP Clubs List lots of entries are empty, because information is missing. I didn't delete them to encourage feedback so that I can make the list more complete. But I know it looks stupid - so this will change in future revisions of the list.

Addresses in <brackets> are Internet email addresses; those in [brackets] are valid in the Amateur Packet Radio network.

Seaview House
Crete Road East
Folkestone, Kent CT18 7EG
ENGLAND

SINC: 1961, adopted the 'true QRP' power limit of 5 watts in 1979
COST: USA: $14 new member, $12 renewal
DX: 7 Pounds new member, 6 Pounds renewal
NEWS: "QRP Quarterly" (QQ), quarterly (January, April, July,
October)
NUMB: 8.800 (assigned membership numbers)
1.500 (subscribed to newsletter)
MEET: de facto annual meeting at Dayton
QNET: ARCI sponsored nets:
Transcontinental Net (TCN) : Sundays, 23:00 UTC, 14.060 MHz
Western States Net (WSN-80): Sundays, 04:00 UTC, 3.558 MHz
Southeast Net (SEN) : Tuesdays, 00:01 UTC, 7.030 MHz
Gulf States Net (GSN) : Wednesdays, 02:00 UTC, 3.560 MHz
Great Lakes Net (GLN) : Wednesdays, 02:00 UTC, 3.560 MHz
Northeast Net (NEN) : Saturdays, 12:00 UTC, 7.040 MHz
Western States Net (WSN) : Saturdays, 16:00 UTC, 7.040 MHz
Some nets change frequencies and times with the arrival of
Daylight Savings Time.
PROJ: Twofer Transmitter (in the 80's)
TEST: Spring QSO Party, Fall QSO Party, a variety of sprints for
both CW and SSB
AWRD: QRP-25, WAC-QRP, WAS-QRP, DXCC-QRP, 1000-mile-per-watt
(kM/W), QRP-NET (QNI-25)
COMM: The QRP ARCI promotes on the air QRP operation, the use of
designated QRP calling frequencies, regular QRP nets, and a
program of QRP operating awards and contests. Oldest
organisation of its kind; but since the 5 watts power limit
was adopted only later, the G-QRP Club is arguably the first
real QRP club still in existance.

~Subject: Defunct clubs and newsletters, ceased activities:
---

o QRP society of the UK (1949-1964?)
o Pacific Amateur Radio Group (?)
o Illinois QRP Society (ILQRPS) (?)
o "K5FO QRP newsletter" (1994)
o "The Milliwatt" (1970-1975)
o EA8 QRP-DX Club

~Subject: 'Unofficial' groups:
---

o The DRAGONSLAYERS QRP Group

This is mainly a Dutch group of amateurs with guest members
from two other countries only. Dick Pascoe, G0BPS, is the only
British member. Three Germans are also members being a family,
~~~~~~

husband, wife and son. There are no membership fees, no magazine, no contests etc, just a group of friends. Membership is by invitation only!

o Zuni Looper Mountain Expeditionary Force

This is a local gathering of QRP ARCI members in Southern California, who operate Field Day with QRP; the name refers to the particular part of the State or National Park they always operate from (the Zuni Loop area of the park). They are well known and admired for the *HUGE* wire antennas they erect.

o Maryland Milliwatt Club

The club was founded in 1992 by two members. Membership is by invitation only. Mailing Address: Maryland Milliwatt Club, 3052 Fairland Rd, Silver Spring, MD 20904.

o World QRP Federation (WQF)

The only thing I know is that Gus, G8PG is president. I suppose it's a kind of QRP cover organisation. Can anyone give more info on this?

o The WVQRP Commandos

o The LIMARC QRP Heavy Hitters
(LIMARC = Long Island Mobile Amateur Radio Club)

o Old Coots QRP Group

~Subject: Acknowledgments:

I was using the club list maintained by Bill Kelsey, N8ET, as a basis for this list. Much later when perusing the QRP-L archives I discovered that Chuck Adams, K5FO, had already compiled a list which contained clubs that I didn't know about. Additional information came from other contributions to QRP-L and from assorted printed material, most notably publications of the G-QRP Club. Thanks for very helpful contributions and corrections from (sorted by callsign):

3945. Repeater Antennas

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-23 15:33:44 UTC
From: hideg.1@nd.edu
Message-ID: <hideg.1-2303951033440001@hideg.cc.nd.edu>
Source record: 250139
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna

This is probably a re-hash of this thread, but I never saw the beginning of it.

I may have an opportunity to put a 440 repeater on a 13-story or 15-story building. This is in South Bend, IN so there can be a fair amount of wind.

I have a Diamond X-500HNA, which has been my initial choice. I may need to go with something a bit lower-profiled (because of wind and aesthetics).

One antenna I was looking at was Cushcraft's dipole array that you erect with a piece of mast. This antenna is about 8 feet tall (compared to the X-500 at 18 feet).

Any other suggestions?

between
>these two and which one you would recomend of these two. If you know
>anything about what features these have an comparisons between the two
>please e-mail me or post here. I will really appreciate any replies I
can

I can offer some information about these two radios. I bought an FT-530 over a year ago when I got my ticket. When my wife passed her exam in May, I expected to get her a 530 as well but when we went looking, the TH-79A had just come out and caught her eye. Of course it was the most expensive dual-bander HRO had!

Let me start by saying that I really like my 530. However, there are some really nice features on the Kenwood. I think the alphanumeric display is really nice. Especially since there are so many repeaters in the SF Bay area. It is sometimes hard to keep them straight. The 79A is also considerably smaller. That was its main selling point for Anamaria. It fits nicely into her purse even with the rubber duck.

As far as other features go, the only other possible advantage of the TH-79A is the menu system for various features. It means you don't need the manual for a lot of things. Nonetheless, when I tried to remember how to enter a station in memory, it took a while to figure it out.

Both radios have essentially the same features as far as the transmitter/receiver go. I'm not sure what mods are available for the TH-79A but I've done the extended transmit/receive so I can use the 530 as an emergency backup for my marine VHF. One feature that the 530 has that I don't think is on the TH-79A is tone-scanning. If you don't know the PL on a station, and either it re-broadcasts the tone or you can get hear someone on the input, then you can scan for the tone to open the repeaters squelch. I've found that to be handy on a number of occasions.

In short, I think your friend will be quite happy with either radio.

Oh, one little difference is that the FT-530 has separate squelch nobs as the outside part of the volume controls for the two bands. The TH-79A sets the squelch with key presses. A little harder to make adjustments

if you need to do it often.

|>Baluns operated within high-VSWR systems can actually
|>worsen system balance and efficiency.

Please explain this relationship between VSWR and RF in the shack?
RF in the shack is strictly a matter of feedline radiation and can
occur just as easily with a 1:1 VSWR as a 10:1 VSWR.

|>...
|>In the event you decide on a permanent installation,
|>ladder line can greatly simplify a multiband installation.
|>A little homebrew is required, but I have a technique that
|>can enable operation on all HF bands at high efficiency,
|>regardless of VSWR, and with no RF in the shack. It does
|>not require specific lengths for either the feedline or
|>antenna, nor does it require an RF ground. In a worst-case
|>scenario, I once used the technique to feed 1KW to a 50'

|>particularly when compared to other feed methods. Again,
|>the system absolutely requires a ladder line feeder, so it's
|>not for everyone. E-mail me if you're interested.

I think everyone here would be interested in hearing how you turned
a 50' dipole into an efficient antenna system on 160M. Feedline losses are
only a part of the picture with respect to antenna system efficiency.

Date: 1995-03-23 15:49:11 UTC
From: rburgan@detroit.freenet.org
Message-ID: <3ks59n$8ve@detroit.freenet.org>
Source record: 250142

I'm looking for red plastic sheets that I can cut up for filters/
bezels in front of LEDs (red) used for counter displays. I
need something about 1" by 5", but would be nice to have something
a little larger for other projects. Someone I'm sure will come
up with an answer I should have thought of, but so far I've
not found anything I can use. We do not have any hobbycraft
stores in our area.

Or put your $40 into a radio that you don't have to return 3 times
to get one that works... In that way, you'll save some headaches.

Just a thought...

Ken

I know quite a few folks that own HTX-202 and HTX-404 radios Ken.
I've even sold a few of them. All in all well over a dozen. I bought
one of each for my personal use. I don't know why David N1QGK had so
much trouble. It must be some kind of statistical anomoly. The "HTX"
series radios are regarded as very reliable radios both in my personal
experience and here on the net. The Maxon folks have very good QA.

Reliability has become a rather moot point anyhow. Automated assembly
and large scale integration has reduced the potential for manufacturing
errors to a very low number. The average life expectency of semiconductors
is listed in decades. We've come to expect electronic devices to
work "first time, every time".

I think that those radios have a couple of unique advantages that far
distance them from the rest of the pack. They are the only contempory
handheld radios whose front ends are filtered to receive ham-band-only,
thus reducing interference from out of band signals. The second unique
advantage is that Tandy Service Plan. No one else has it. Think about
it. What's the first and biggest worry a potential buyer has when buying
second hand equipment? "Is there some hidden flaw? Will it work a week
from now... a month from now... a year...". The five year coverage of

the TSP can assure the prospective customer that it WILL work until 2000 or Radio Shack will replace it. If you choose to keep it then the TSP will assure you that you will not have to pay for a repair, or even shipping until the turn of the century. Remember: it's not an extended warranty. It's a service plan.

When the battery broke off my two week old $500 icom radio the fine folks at icom said it was not covered by the warranty and suggested I send them $65 for a new battery. Since then I've had to replace the power connector and, later the antenna connector. This "top of the line" radio has taken a bit of wear and tear in a very bad way. I'm sure a $40 service plan would have been a good investment. As it is, I would have spent 5 times that much to repair the radio had I not been so darned cheap and waited until I had time to do it myself. (Shop estimate for power connector $65, for antenna connector $60, for battery $65)

All those things would be covered by the TSP.

(Yes, I DO work part-time for Radio Shack. I apologise to the net for this bit of salesmanship... please forgive me.)

The Cushcraft 4-pole is a piece of crap, and the Diamond is subject
to lightning damage, and UV damage to the radome. The Comet repeater/
base antenna is better, but the wind will whip it around a lot. I've
had one at 970 feet on a TV tower for 4 years now, it's got burns all
over it from lightning strikes, it bends nearly flat in heavy winds,
but it's still working. For the $124 I paid, it's *Recomended*.

3953. W5YI petition...HF on a bicycle?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-23 17:15:20 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9503231114.ZM12166@SALCIUS2>
Source record: 250149

This isn't really related to the thread about banning 1-way broadcasts...

>Time out! HF rig on a bicycle? That's a bit of a stretch of my
>credulousness.

I operate 20 meter SSB on my bicycle. I just returned from a two week vacation in Hawaii where I made 97 contacts on my bicycle-mobile HF station.

I made contacts with Australia, New Zealand, Japan, Argentina, Canada, and the U.S. mainland as far away as Florida. I use an MFJ 9420 20 meter SSB Travel Radio which puts out 12 watts. My antenna is an 8 ft. Hamstick mobile vertical.

During 6 afternoon bike rides near my home QTH in Lake County Illinois, I contacted 25 states and 14 countries from my 20 meter bicycle-mobile station.

BTW, I agree that we should ban one-way broadcasts on ham radio. Ham radio is not the right medium for broadcasting. Without a broadcasting ban, sooner or later we will have dozens of K1MAN type stations clogging the bands.

From: carndt@netcom.com
Message-ID: <carndtD5wMDE.5ou@netcom.com>
Source record: 250150

I've thought about this for a while, now.

For anyone that WANTS more than one set of Cal Amateur plates, AND doesn't mind paying for some vanity plates, also, I submit...

Get the first as regular amateur plates, callsign only.

Any others, get vanity plates with a suffix similar to what we already use in special situations...

KD6DSI for first plate

KD6DSI 1 (like packet calls)

KD6DSI 2 etc

KD6DSI M (for mobile)

California allows up to 7 characters on plates, now, and these are all valid plates as far as I know. Perhaps the 7 character ones don't allow spaces, though.

37,

Chris

I saw one at the local RS three weeks ago. It looked like a decent
unit but the mic was cheaper than hell. It felt like a cheap piece
of empty plastic.

From a quality of materials and workmanship, I'm MUCH more impressed
with the HTs they sell.

I know from what I've read here recently, not many people have a very high opinion of Radio Shack, however, most of you like the HTX 202 2m unit.
Anyways, we just got advance notification today that the unit is to go on sale on April 2 for 189.99. The 440 unit will be onsale also for 229.99. (Yes, there will be a 0% interest promo also. (Please no comments on that!))

3960. Communications Quarterly Spring Highlights

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-23 19:14:39 UTC
From: nw2l@aol.com
Message-ID: <3kshav$94t@newsbf02.news.aol.com>
Source record: 250155

"COMMUNICATIONS QUARTERLY" Reports a Milestone in Communications Receiver Development!

The upcoming Spring 1995 issue of "COMMUNICATIONS QUARTERLY" will feature an article titled: "The Watkins-Johnson HF-1000A Milestone in Communications Receiver Development." This informative piece is written by Scott D. Prather, KB9Y, an author who is frequently published in the Quarterly.

Those of you who would like to learn about this new receiver will find a plethora of information that will explain in detail what it is and how it works. Mr. Prather begins his article: "The Watkins-Johnson HF-1000 is the first affordable, stand-alone commercial receiver to use digital signal processing (DSP) at the IF level. In the HF-1000, DSP provides IF selectivity, demodulation, noise blanking, fine tuning, passband tuning, and signal strength calculation, along with several other features ... The use of DSP in the HF-1000 represents a major turning point in receiver technology." One key piece of information offered by Mr. Prather is that the unit is relatively simple to use. He explains: "I found I could execute about 90 percent of the receiver's features without referencing the manual." In conclusion, the author continues: "So, what's it like to use a digital receiver? It's unbelievable! ... the HF-1000 [is] the most enjoyable receiver I've ever operated." "Watkins-Johnson has made a brilliant move into the future of communications receivers."

The article features such topics as: an overview of the HF-1000, the HF-1000 RF assembly, a brief tutorial on Digital Signal Processing, the HF-1000 digital control assembly, and using the HF-1000. Other features include a schematic of the Siliconix Si8901 high-intercept mixer and photographs of the RF and digital assemblies within the HF-1000.

If you'd like to know more, pick up your copy of "Communications Quarterly" -- on newsstands in May.

3961. GB2RS News 26th March 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-23 19:16:16 UTC
From: dave@llondel.demon.co.uk
Message-ID: <796011376snx@llondel.demon.co.uk>
Source record: 250156
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 26th of March and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

Free stands are available to clubs at the RSGB Stafford Amateur Radio and Computer Show.

More Novice licence instructors are needed.

At this year's Stafford Amateur Radio and Computer Show, there is an opportunity for radio clubs, societies and special interest groups to put on a display free of charge. The event, which incorporates the RSGB National Convention, takes place on the 19th and 20th of August. If your club would like to take advantage of this offer, call 01923 893929 for a booking form.

Are you interested in teaching Novices? The RSGB is looking for Novice Licence instructors, especially in the Blandford area of Dorset, the Waveney area around Diss in Norfolk, south-east and south-west London, Warwick, and Alcester in Warwickshire. Anyone in those areas interested in becoming a Novice instructor should write to the RSGB Project YEAR Co-ordinator, Phil Mayer, G0KKL, 16 Haig Avenue, Poole, Dorset BH13 7AJ (his address is not correct in the current RSGB Call Book) or call him on 01202 700903. Phil will be pleased to give you more details of the scheme and let you know how to apply to become an instructor.

The RSGB Planning Advisory Committee is about to reprint the Planning Permission - Advice to Members booklet and there will inevitably be a few minor amendments to the text to bring it fully up to date. Would any member who has recently used the booklet and who can suggest any improvements please send them as soon as possible to the Planning Advisory Committee Chairman, Geoff Bond, G4GJB, Wolvelay House, Woolley, Wakefield WF4 2JJ. Members should also be aware that the standard letter which is sent out from RSGB Headquarters in support of a member's planning application has been revised and will in future be sent direct to the local planning authority involved. When requesting such a letter, therefore, would members please supply:

- the name and address of their council offices,

- the reference number given to the application, which will be on the acknowledgement form, and

- the address of the site, and whether the application is for the retention of a mast that is already there, or whether it is a proposed new one.

Listeners connected to the Internet service may be interested to hear that Geoff Brown, GJ4ICD, has introduced a Home Page which features amateur radio servers and sites around the world. Also included are new pages to the Internet on DXpeditions and beacon listings. More pages will be added week by week as time allows. The address for logging-in is: http://www.business.co.uk/~equinox

If anybody would like pages included on the Internet regarding amateur radio, please contact Geoff Brown on 01534 77067 during office hours.

Now some notes for your diary: the Morse Enthusiasts Group Scotland is organising an informal get-together near Dunfermline to celebrate the birthday of Samuel Morse on Thursday the 27th of April. All amateurs are welcome for refreshments and a go on the key. For further details, please send an s.a.e. to George Allen, GM4HYF, whose address is correct in the latest RSGB Call Book.

The Amateur Radio Caravan and Camping Club rally at Amerton near Stafford, will take place over the Easter weekend, If you wish to book a pitch please contact the Membership Secretary, Alan Gard, G4LWA, whose address is correct in the current RSGB Call Book, or telephone him on 01494 531755. Completed applications must be with the club by Friday the 7th of April.

The Ayrshire VHF repeater, GB3AY, on channel R2, was moved to its new site at Baidlandhill Dalry, Ayrshire, and became operational on the 18th of March.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

The major expedition to Conway Reef in the Pacific should be on the air by now. They hoped to arrive on Friday or yesterday, Saturday, and plan to be active until Monday the 3rd of April. Callsigns will be 3D2CT on SSB and 3D2CU on CW and RTTY. The group plans to run three stations simultaneously, round the clock, and particular attention will be given to working European stations. Check the usual DX frequencies.

From Fernando de Noronha, PY5CC will sign PY0FM from now until Thursday the 30th of March. Activity will be on all bands from 6 to 160 metres and he will be active in the CQ WPX SSB contest until 2359 UTC today.

And from the Town Hall of Sasso Marconi, Bologna, IY4W is a special event station which will be active until the end of April on all HF bands. QSL via I4ALU.

Next the Rally News:

The Bournemouth Radio Society's 8th annual sale is taking place today, Sunday the 26th, at Kinson Community Centre, Pelhams Park, Millhams Road, Kinson, Bournemouth. The event features amateur radio and computer

traders, clubs and specialist groups. Doors open at 10.30am and there is talk-in on 2-metres channel S22.

Also today, the Magnum Radio and Computer Rally is taking place at the Magnum Leisure Centre, Irvine. This event features the usual traders, special interest groups, a bring and buy stand, and Morse tests on demand. Take two passport-size photographs and identification if you wish to take your Morse test at the rally. Doors open at 11.00 am or 10.30 am for disabled visitors.

And also today, the Pontefract and District Amateur Radio Society rally takes place at the Carleton Community Centre, Carleton, near Pontefract. This event features trade stands, a bring and buy stand and a bookstall. RSGB Morse tests are available on demand, but don't forget to take two passport-size photographs along if you wish to take your test at the rally. Doors open at 11.00 am or 10.30 am for disabled visitors.

Next Sunday, the 2nd of April, the Feltham and Hounslow Sea Cadets Computer and Radio Rally will take place at the Feltham and Hounslow Sea Cadet Corps, 2 Poplar Way, Feltham, Middlesex. The doors open at 10.00 am. For further details, please contact Allan, on 01784 456486.

Now for the HF contest news:

The CQ WPX SSB contest is taking place this weekend and finishes at 2359 UTC tonight. Activity is on all bands from 160 to 10 metres, except the WARC bands. Send RS report and a serial number.

Next Sunday, the 2nd of April, the first ROPOCO contest will take place between 0700 and 0900 UTC. The full rules were published in the April RadCom.

And on Tuesday the 4th of April, the first event of the RSGB Slow CW Cumulative contest will take place. The rules are in February's RadCom.

Next some VHF contest news:

Today, Sunday the 26th, a 70 MHz contest is taking place - it is the 70 MHz Fixed station and SWL contest, and the rules for this contest can be found in the February RadCom.

Also today is the final event in the Winter Microwave Cumulative contest, on all bands from 2.3 GHz and up between 0900 and 2100 UTC. Although this contest does not appear in the VHF Contest Calendar in this month's RadCom, the full rules were published in the November edition.

The Chelmsford UHF repeater, GB3ER, which had been off the air for maintenance, has now returned to service on channel RB3.

The Southampton UHF repeater, GB3NF, on channel RB11, will close down from this Saturday, the 1st of April. This is because the mast being used for the repeater is being dismantled. The Waterside UHF Repeater Group is looking for an alternative site, but bearing in mind the time

required for permission and site clearance, the repeater will be off the air for some time.

And now the solar factual data:

The period from the 13th to the 19th of March saw solar activity at very low levels and with the geomagnetic field declining from 'sub storm' levels to quiet levels. The sunspot indices started the period at 35 and declined to 19 on the 16th before increasing to 69 on the 19th. The mean for the period was 45. Solar flux levels increased from 77 units on the 13th to peak at 92 units on the 18th; the average for the period was 83 units. Several small and insignificant solar flares took place, the largest was a C4/1N on the 16th. A 12 degree filament disappeared on the 18th. The electron fluence has been at a very high level throughout the period. The X- Ray flux increased from A3.9 units on the 13th to B1.3 units by the 19th, the average for the period was A8.0 units. The 90 day solar flux average on the 19th was 83 units, down one unit from last week. Geomagnetic activity started the period at 'sub storm' levels, with an Ap index of 33 units, but declined to quiet levels for the second half of the period. The average for the period was Ap 14 units. The aa indices as supplied by the British Geological Survey for the period from the 7th to the 13th of March started at very quiet levels with only 5.5 and 5.8 nanoTeslas being recorded on the 7th and the 8th respectively. Activity increased daily from the 9th and ended the period at 'sub storm' levels with 53.3 nanoTeslas on the 13th. During the afternoon period on the 13th, 115 nanoTeslas was recorded with a consequent aurora. The average for the period was 29.5 nanoTeslas, about K3.

I'll repeat the figures: Spots - 45, Flux - 83, Ap index - 14, X-Ray flux - A8.0.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers as reported by Meudon for the period from the 10th to the 16th of March averaged 6.5 MHz with the 10th being the best day at 7.8 MHz; levels declined to only 5.7 MHz the following day. The darkness hour lows declined from 3.1 MHz on the 11th to 1.9MHz by the 13th during the height of the geomagnetic activity. Levels recovered slightly to end the period at 2.4 MHz, the average for the period was 2.3 MHz. The daytime highs are taking place between 10.00 and 15.00 hours with the darkness hour lows between 03.00 and 06.00 hours.

I'll repeat the figures: Highs - 6.5 MHz, Lows - 2.3 MHz.

And lastly the solar forecast.

This week the quiet side of the sun should be looking our way; solar activity is expected to be very low with solar flux levels into the mid 80's. Geomagnetic activity is expected to be mostly unsettled, but active conditions may occur for the next couple of days. Ionospheric MUFs for the south during daylight hours are expected to be about 22 MHz

and 19 MHz for the north. The darkness hour lows are expected to be about 9 MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Uniform and G7 Uniform Papa series, and Novice calls in the 2 0 Alpha Kilo and 2 1 Delta Victor series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

3962. KENWOOD TH-F28 modification

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-23 19:45:45 UTC
From: tzclr-sd@yunus.mam.tubitak.GOV.TR
Message-ID: <199503231954.LAA17903@UCSD.EDU>
Source record: 250158

Does anybody know of any TX range modification for the Kenwood TH-F28.
I want only to send between 144-148 MHz during my visit in the U.S.A.

I got mod info about TH-28A but my TH-F28 is from Japan so it is the
"far-east version" of the TH-28 and I think it is not compatible with TH-28A.
A JA OM told me, that it can be modified with keypad sequences, but how?..

Original state: TX= 144-146 MHz
RX= 100-174 MHz, Subband RX= 340-520 MHz continous.

Thank you very much in advance.

So much?? SO MUCH???? Where do you see SO MUCH in my post? You can notice
the difference on an S-meter, period. I didn't say HUGE, I said
noticeable. Do you normally jump to conclusions?

David :-)

Wow. Limited to more than 8 watts? :-) OK, I suppose you meant
no more than 8 watts. Well, think about it. The only way it's
pushing more than 8 is with 13.8 provided. The battery packs come
nowhere close to 8 watts. I plug mine into an external antenna
when it's running 13.8v. Anyway, please quote the regulation about
8 watts being the maximum allowable by law. I'd like to read it.

David

SB DX ARL ARLD014
ARLD014 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, Jerry, KF8EP, Francesco, IK0FVC, and the Contest Corral column from the pages of QST magazine. Thanks to all.

INDONESIA. Team leader YB0RX will be organizing a DXpedition to Enganno Island, a new IOTA, off the coast of South Sumatra, Indonesia. This three day operation starting March 24 will involve 35 people. Listen for their CW, SSB, RTTY and OSCAR on all bands, including the CQWW WPX SSB Contest using the call sign 8A4EI.

CAMBODIA. XU7VK is active on 14007 and 14017 kHz. QSL via HA0HW.

SOUTHEAST ASIA DXPEDITION. Mike, DF8AN, leaves Germany on April 21 bound for Kathmandu, Nepal. He has applied for a visitor's call sign, but may use 9N1/DF8AN between March 22 and April 5. Activity will be mostly CW. From Kathmandu he travels to Hong Kong to operate with a VS6 call sign or VS6/DF8AN between April 6 and 13. While in Hong Kong he plans to visit Macao to apply for an XX9 call sign. From April 13 to 24 he will try to be active from the island Koh Samui, Thailand, with a visitor's licence for HS/DF8AN. Mike's operations will be on 40, 15 and 6 meters only. QSL via the bureau to DF8AN or direct to Michael Noertemann, Amselstieg 4, D-38226 Salzgitter, Germany

EAST MALAYSIA. 9M8RC has been on 14019 kHz. QSL via HL5AP.

TOKELAU. Ron, ZL1AMO, has cancelled his T31 operation slated for April due to transportation problems. He hopes to be active from Tokelau instead.

SVALBARD. Three YL operators will activate Spitsbergen Island, IOTA EU-26, in the Svalbard Archipelago April 8 to 12. Their radio equipment will be a battery powered, synthesized portable radio with

25 watts of output power to a dipole antenna. Try 14247 and 21247 kHz SSB. Some CW operating is planned. Please note that their radio has no provision for split frequency operation. Also consider their limited battery power and make QSOs short by exchanging only signal reports unless otherwise requested. QSL Unni, JW6RHA, via LA6RHA. QSL Turid, JW9THA, via LA9THA. QSL Inger, JW8KT, via LA8KT.

HEARD ISLAND UPDATE. The South Sandwich Island DX Group has announced that Verne Fowler, W8BLA, of Roswell, GA, is the newest team member. Verne will fill one of the CW op slots. There is still a need for CW ops and a team doctor. For details, FAX your request to Jerry, AA6BB, at 503-998-1269 or Tony, WA4JQS, at 606-679-3151.

CANADIAN ARCTIC DXPEDITION. The Inuvik Amateur Radio Club is planning to operate on what is believed to be Hendrickson Island in the Arctic Ocean. This island is located NE of Tuktoyakutuk at 69 29N by 133 36E, is IOTA NA-192 and Canadian Island number NW-37. Operations should start at 0000z April 1 and finish up some time Sunday afternoon. Listen for VE8YEV. Two radios will be used, with one parked on 14260 kHz, an IOTA frequency, most of the time. The other radio will roam 80, 40 and perhaps 15 meters operating CW, SSB and RTTY.

QSL ROUTE CHANGE. Ken, V73C, aka AH9C, reports that OKDXA, the Oklahoma DX Association, no longer handles his QSLing chores. Until further notice, send cards direct to V73C or AH9C Callbook addresses.

QSLS WHILE YOU WAIT. Francesco, IK0FVC, plans to be at the Dayton Hamvention April 28, 29 and 30. He will have 1A0KM and HV4NAC logs and QSL cards. Plans are to be available for direct confirmation for those in attendance still needing these cards.

THIS WEEKEND ON THE RADIO. The CQ World-Wide WPX SSB Contest, sponsored by CQ Magazine, runs from 0000z March 25 to 2400z March 26. Exchange signal report and progressive serial number starting with 001. Details appear on page 105 of February QST. Good luck in the contest.

ok, there are a few things i have to know...

1. for working rs-10/11 HOW do i disable my IC-2GXAT HT's mic? i'm sure RS10 wont like FM sidbands to much, but how do i kill the mic OR pu on a PTT circiut <from hamcomm program>

2. Is it illegal to let somenon-ham use autopatch if i'm right there with that person?

3. where the Heck do i get aluminum solder?

4. what are the RTTY-BAUDOT freqs on 2m IF any
and
5. what are the normal EME freqs? any from 144-144.21?

thanks much...

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 23/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 23 MARCH AND FORECAST FOR 24 MARCH - 26 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 94/40

GOES satellite data for 22 Mar
Daily Proton Fluence >1 MeV: 5.8E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 1.6E+08 (moderate)
X-ray background: B2.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
24 Mar 25 Mar 26 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 24 Mar: 94/40

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 22 Mar
Learmonth 8 2123 2322
Fredericksburg 7 3
Planetary 8 3

Observed Kp for 22 Mar: 0111 1211
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
24 Mar 10 Quiet to unsettled
25 Mar 10 Quiet to unsettled
26 Mar 20 Unsettled to active
COMMENT: IPS Geomagnetic Disturbance Warning 95/08 will be issued
later today for the interval of 26 - 31 March.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
23 Mar normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Mar normal normal normal
25 Mar normal normal normal
26 Mar normal normal normal-fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
23 Mar 39 near predicted monthly values to slightly enhanced.

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
24 Mar 35 Near predicted monthly values
25 Mar 30 Near predicted monthly values
26 Mar 30 Near predicted monthly values
COMMENT: Observed Townsville and Hobart frequencies: near predicted
monthly values.

type the following at a shell tool or command tool prompt while you are connected to the Internet:

finger solar@xi.uleth.ca

Then wait for the data to be sent to you. If it does not do it within 30 seconds, kill the process with a Ctrl-c then do it again.

Flux without the good absorbtion predictions can be obtained from:
http://www.drao.nrc.ca/web/solar.shtml

I'm going the other way--I have the Cushcraft array you mentioned, and I'm
switching to a Diamond X-510NA as soon as the weather cooperates.
My friend in Hawaii didn't care for the Cushcraft's performance on his
repeater. It'll be interesting to see what the difference will be.

Well, my "elmer", AA4MW, likes to tell of when he first moved into his house. He got the tower and antennas up in the back yard, but was too busy for several months to unpack the radios. Several neighbors came around complaining of interference, and he took them out back to show them that the cable was not connected to anything and into the shack to show them that the radios were still in boxes, so it couldn't possibly be him.

When he finally did get on the air, he didn't have any complaints, justified or otherwise.

73,
Clark

|>the center freq control to step through the signals. Kinda neat in
|>contests.

Hans, how do you find the DSP unit compares to an IF filter? My personal
experienc with the W9GR DSP filter that I built seems to indicate that IF
selectivity is much more effective than AF selectivity. At least with my
rigs (FT-767GX, TS-820S, SB-104) selectivity at the IF is much more useful
as it allows the ALC to track the selected signal instead of all the
signals present in a much wider passband.

Together they make a formidable pair, but I wouldn't trade one for the other.

Hi Penn:

My first advice is: DON'T WASTE YOUR MONEY ON THE BRAID; it won't
solve the problem.

There are so many fallacies in the amateur community on this subject,
it has become nearly impossible to untangle the mess. I've only been
reading this news group a few weeks, and I'm already convinced that
someone needs to write a FAQ covering these issues.

My amateur career started in 1966, and I fought this problem for
most of the intervening time. It was only seven or eight years ago
that I finally did the research necessary to resolve this common
difficulty for myself.

*** Note To All Readers Of This Post: ***

A. The following applies only to those operators forced for one reason
or another to use non-resonant dipoles.

B. If you do not enjoy sarcasm, double-click the little "minus sign" now
(or whatever your system interprets as a desire to EXIT).

C. Flames will not be read, at least not by me. I pay my neighbor's kid a buck a day to sort and delete my mail.

OK, onward to the problem.

First, the reason you have RF in the shack is that the standing waves reflected from your antenna have no respect for either the shield of your coax or the chassis of your rig. The fact that humans say these items are grounded is insufficient to convince the reflected energy to behave. The waves flow across everything in their path as though it was part of the antenna itself. And because this is RF, artifically created for the express purpose of radiating, everything just mentioned * is * part of the antenna itself.

There are several basic solutions:

**** 1. ****

Connect one end of a 3' length of 16 or 18 gauge copper wire to the chassis of the rig, and connect the other end to a large pool of saltwater resting on your property. This will force the chassis to assume earth ground potential, dissipating the reflected energy flowing down the outside of the coax. If the impedance and VSWR of your antenna are such that the problem persists, increase the gauge of the ground wire and the size of the saltwater pool until the symptoms disappear.

From time to time, you will need to refill the pool and replace the ground wire due to evaporation and corrosion, respectively. A field strength test will show that the coax is continuing to radiate from the shield at some distance from your rig, and that your pattern is not at all like the figure-eight you anticipated. On a positive note, you will discover that a considerable portion of your RF is heating the pool, providing a perfect place to relax after long-term contesting.

**** 2. ****

Stack several 1KW-size high-permeability toroids together and wind ten or twenty turns of your coaxial feedline through the core. This will choke the RF flowing on the braid, effectively isolating the chassis of your rig/tuner from the reflected energy. At higher power levels, the energy dissipated in the toroid will also be sufficient to create a miniature hotplate for preparing quick snacks between QSO's.

**** 3. ****

Place a balun at the center of the dipole. Any ratio will suffice. At frequencies which produce high VSWR, the electrical characteristics of the balun will change, either "opening up" or shorting the elements. This will produce an unusually dynamic field strength pattern, adding to the fun and challenge of amateur radio. If you operate at higher power levels, a little bird seed glued to the balun will also soon discourage most airborne guests from entering your "no fly" zone. It should be noted that this particular remedy provides no relief from RF in the

shack, but it does encourage a greatly improved comfort level for most operators. This is due primarily to the fact that the magical goodness of the balun, now elevated, is unspoiled by detectable signs of stress.

**** 4. ****

Mount the center of the dipole on a support sufficient to hold the weight of a remote antenna tuner. Shop around for a used Johnson Matchbox, mount it on the support, and connect the dipole elements to the balanced output. Install a heavy-duty slave servo and positioning readout device on each of the tuner's controls and bring the forty-odd control cables into the shack. Now use homebrew skills to fabricate a system of master control and readout instrumentation. Don't forget to weatherproof the tuner.

**** 5. ****

Use the expensive, late model tuner you purchased as-is, connecting the output from it's internal balun to open-wire or ladder line. The effect will be similar to (3) above, although you will eliminate coax losses. In this configuration, do not glue bird seed to the balun.

**** 6. ****

Modify your tuner so the balun always sees it's designed impedance. Feed the output to ladder line. Run a safety ground to your rig in case of lightning or equipment failure. Buy a hotplate. Ignore the birds.

OK, OK . . . I wasn't all that subtle. You're right, it's number 4.

Following are excerpts from recent e-mail to explain the technique. I'm kidding about number 4, of course. Numbers 1 through 5 above have been tried in various forms by many operators, and all present significant disadvantages. They do serve, however, to illustrate the underlying principles still being put to the test in our community.

The technique is simple, but it took me nearly 25 years to come up with it. I constructed my first working model following a ten year absence from our hobby. A year later, I purchased my first new ARRL Handbook and found my idea in print, in the form of a QRP antenna tuner. Sigh. So much for being an inventor <g>.

Anyway, like I said, the concept is simple and by now you may have come across it. In short, it consists of modifying a standard antenna tuner ("T" or Pi configuration) by placing a 1:1 balun at the * input * instead of the output of the tuned components. The primary modification required is insulating the tuned components from the chassis.

I have a schematic for the modifications made to my tuner (Dentron 3KW), and I should mention that the balun ratio isn't critical. In fact,

the usual 1:4 balun that comes with most tuners should work fine. Note that there is a * big * difference between using the balun at the output of the tuner, the way most are supplied from the factory, and the technique described above.

Personally, I will never use any other system for feeding a dipole. Efficiency is superb and there is * no * RF in the shack even when no ground is used. Signal reports are the best I have ever received on any dipole. I have used the system in three locations (two in Texas and one here in PA), and achieved excellent results with low and high power, and with dipoles from 50 to 150 feet.

I can provide numerous additional details regarding this concept, including several that can make the modified tuner more versatile than ever. As a side note, my tuner can be restored to an unbalanced output configuration by placing a single jumper across two terminals on the rear panel. All in all, it is the system I always wanted, but thought only a Matchbox could provide.

The additional details mentioned above include the following:

A.) My tuner was originally manufactured as a "T" configuration. This circuit provides the greatest range of impedance matching within the "three component" category, but offers no harmonic suppression. I rewired my tuner to a Pi network and use B.) below to compensate.

B.) The balun inside the tuner is wired between the input connector and the tuned components. Additionally, I have built an external tapped toroidal transformer which provides ratios up to 16:1. I insert this between the transmitter and tuner. Its input will always be 50 ohms, once the tuner is adjusted for 1:1 VSWR at the transmitter. However, its output will vary as a function of the selected tap. This means in theory that I am mismatching the output of this external transformer by feeding it to RG/8, which in turn connects to a SO239 on the tuner. In practice, the reflections seen by the transformer are only slightly reactive, and losses through the 1' piece of coax and SO239 are extremely low. Anyone worried about this is entitled to a nit-picker award.

I should mention that the external transformer might have been required even with a "T" network, simply because of the extreme range of impedances possible with non-resonant antennas. Due to it's lossless characteristics, ladder line will not mask extremely high impedances in the manner often seen when using long runs of coax.

C.) By grounding one side of the balanced output of the tuner, it can be used to tune unbalanced antennas. This retains the versatility of the tuner for other uses.

D.) In theory, the input balun forces equal currents through the tuner, and through the ladder line. In the near future, I will build a test antenna with unequal-length legs, and drag out my old RF ammeter to

test this. Alternately, a good indicator might simply be whether such an antenna causes RF in the shack with no RF ground. If the antenna is built with one leg at 15 feet and the other at 60, and if 2KW doesn't produce shack RF, I'll pronounce it balanced.

Whew! Sorry if the above seems disjointed, but I do not have the necessary time to reorganize the information just now. I sincerely hope this is of help to anyone still suffering the way I did. Anyone who can add to this topic should do it here if possible, rather than e-mailing me.

As a final note on all this, do not expect predictable radiation patterns from non-resonant dipoles, regardless of feed method. The technique described above merely eliminates RF in the shack and ensures that the maximum possible amount of RF is delivered to the dipole itself.

Penn, let me know if you need additional info on this. I'm off the air right now due to a recent move, but a little digging will produce data regarding the toroids, tuner components etc. I'll tell my helper to give your e-mail priority.

73,

Jack Long, WB3U

3982. NEED HELP ON BUILDING REPEATER!!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-24 02:04:11 UTC
From: helix@solaria.sol.net
Message-ID: <3kt9ar$qcr@solaria.mil.wi.us>
Source record: 250079

HELP!!!

I am putting up (hopefully) a "homebrew" 440 MHz repeater within the Milwaukee, WI area, serving a good chunk of the Southeastern Wisconsin area (esp. outlying Milwaukee Metro). I have a GE MASTER II, 8 channel, 40 watt 450-500 ranged mobile unit, WITH instructions and everything.

I want to place this thing in the amateur band. Now...

I understand that these radios can be modified to receive/transmit properly within the amateur spectrum, but am having problems finding any appropriate documentation regarding this equipment. Seeing how old it is, I have had quite a bit of difficulty within the Milwaukee Metro area finding anything to do with any form of amateur radio.

I NEED HELP!!! If anyone has information who currently has or can point/steer me in the right direction to someone who current has information regarding modifying the GE MASTER II, 8 channel mobile radios into a repeater, I would like to have an email address and/or telephone number along with the name and callsign of the individual.

I am retrofitting this equipment into an existing MOTOROLA MOCOM 440 MHz repeater that works, but the receive isn't too hot. I've heard that GE's equipment is far more adjustable and easier to work with than MOTOROLA's.

Any comments and/or help?

Again... I NEED SOME HELP FROM ANYONE ON THIS MATTER!!!

Please send email to this address: helix@solaria.mil.wi.us

Thanks and 73 de KC6ONL!

I'm confused. I thought the NEDA guys had quite the system of packet
nodes and gateways running in the NorthEast. They're based in New
Hampshire and, from what I've seen of their work, seem to have things
humming along nicely. Or am I mistaken, not being from the area?

Yes, there are several repeaters, although I believe one is kept for emergencies only. I was there a few years ago and the locals were quite friendly in helping me out with my reciprocal licence. There is a little office there where you show your own licence and they issue a certificate allowing you so much time for operation, I think 1 month or something like that. I can't remember if it cost anything. When you're there, if you run into Tom VP9KG, say Hello from Paul VO1HE :)

In a previous article, mudaw@uxa.ecn.bgu.edu (David A. Webb) says:

>jeffrey@math.hawaii.edu writes:
>
>For the most part, any amateur transciever who's reciever can be modified
>to recieve out of band can do so because the receiver was designed to
>be used for more than one application.
>For example, the Yaesu FT-23R out of the box received 144-148.
>BUT, the reciever was identical to the one inside of the radio's
>commercially made brother used in some business bands around 152-156 or so.
>When Yaesu designed the radios, they knew it would be cheaper to build
>one receiver for several radios, and type accept it for the entire range.
>The FCC has type accepted the reciever in the 23R for the range 140-164.
>So modifying the reciever to tune to all of these frequencies won't
>violate type acceptance certification.
>I doubt a manufacturer would design a chip and circuit which could
>be modified to allow reception of frequencies for which the unit's
>reciever wasn't type accepted for. (easy modifications, that is)

Note that many HT's will receive a rather wide band by simply programming
from the pad. I cannot believe this is modifying the unit and causing it
to interefere with anything.
Any comments on that?

Hi All,

Well i have the TNC hook up to the radio and coumpter,but I try to get out to stations,and to rec some coming in but nothing.So it looks like I need more power .does Radio Shack carry anything that i could use to up the ouyput.About how much should it cost for something that could put out 15 to 20 watts .If anyone out there has any ideas on what i can do it will be great.Well I should tell you the equip i am using

RADIO SHACK TANDY 1000sl
RADIO SHACK HTX 202 HT
KANTRONICS KCP-3 TNC

One other thing i get alot of noise coming over the HT it comes from the coumpter like a whislting noise so i don't know how much effect this would have on it to.Any help.Thanks in advance.Need more info please email me @ {techman@ace.com and i will get right back,i need to solve this so i can get up and running on packet.Thanks again.

>
>Do you get more power out from the arial using an ordinary antenna tuner, or
>is it the tuner that burns up the reflected power?
>

The tuner will consume some power, due to ohmic losses in its components,
but this is unlikely to be much of a factor in overall performance.

The greatest "negatives" in the system you describe will be the radiation
inefficiency presented by a shortened vertical (this may not be significant)
and the coaxial feedline losses that occur under high VSWR conditions (this
can be *very* significant).

>-Brian
>

Hi Brian:

I agree with you, except for one thing. I don't find a requirement in CFR 47 for compliance with part 15, except as it applies to the original manufacturer of the product. Nor do I find anything that states that equipment operated by a ham must meet this particular section of the rules.

In other words, I believe the only requirement for meeting part 15 falls on the original commercial manufacturer, and that otherwise, the operator is responsible only to insure that his equipment meets specifications for spurious and such items listed in other parts of the Rules.

A piece of commercial equipment which is proven to be in violation of part 15 carries the possibility of punitive measures only for the original manufacturer, and only if it is proven that the violation is specifically due to a failure on his part.

Let me know if you believe this is incorrect.

>I have not received interference from passing vehicles.
>

Pete,

Considering that the nature of the noise is unaffected by engine RPM, I would wonder if the culprit might be some of the onboard digital circuitry, such as the computer. These sometimes supply modulated control voltages to high current engine controls and the resultant noise radiation can be more severe than you might think. I don't know the specifics of your vehicle, so this is only a guess.

Regarding grounding and shielding, don't forget that noise carried on power leads and audio cables to your audio system can be re-radiated from your AM/FM antenna. You might want to try disconnecting this, just to eliminate one more possibility.

Best of luck with the problem.

I agree with this entirely. Contest chaos preempts all else, including
emergency traffic. ARRL and other amateur organizations have been
unusually negligent in their failure to set aside "alternate use" frequencies
for both phone and CW during contests.

|> 1750 Hz tone. Does anyone know if there are any repeaters in London using
|> the CTCSS tones? If so, freqs and tones would be helpful
|>
|> thanks es 73 de Jay, KD2L

I don't know which, if any, London repeaters are CTCSS equiped, but
the following may be useful...

The UK is divided into CTCSS repeater areas. These are labelled A, B,
etc. up to J.
Where a repeater is CTCSS equiped, it will append the CTCSS ident letter
A..J to its normal ident of GB3??

So the 2m repeater in Swindon, for example, sends a (morse) ident
of GB3WH J

UK repeaters are required by their licence to give their ID at least
every 15 minutes.

The CTCSS frequencies (in Hz) for these areas is ...

A 67.1
B 71.9
C 77.0
D 82.5
E 88.5
F 94.8
G 103.5
H 110.9
J 118.8

Note also that a UK repeater needs EITHER the 1750 Hz tone OR
the CTCSS sub-tone to 'open' it. Once open, it will remain
open until a few seconds of 'no carrier' occurs, when it will
drop out.

None of the repeaters (as far as I know) TRANSMIT CTCSS tones.

Hope that helps....

Mike

A single quarter wave wire per band will serve as a counterpoise for the purposes of removing RF from the shack. It doesn't require a full set of radials as would a counterpoise as the term is used with ground mounted verticals.

I just run the wires around the base of the wall. They don't need to be arranged in any particular shape, or aligned in any way with the antenna.

Make sure that the counterpoise wire for each band has the end taped with electrical tape: these are high-voltage points, and your dog, cat, foot, etc. will not enjoy contacting that end while you are operating!

Jim, I don't quite understand the reason for your complaint. Did you think that your dealer was simply going to pocket the money? Remember, he now has to check out the unit on a test bench to make sure it still works, because not everyone is as honest as you. Some less educated amateurs who didn't RTFM might have accidentally applied reverse power and smoked the insides, or tried to transmit without an antenna and thus fried part of the output stage before they brought the rig back.

Further, since the dealer did actually sell it, and you might have mailed in the warranty card, it is no longer a demo but now is considered USED. You know how big the price difference is between a new rig and the same rig when you try to sell it two weeks later. The dealer is in exactly the same situation, but he also has store overhead to cope with. I think your dealer was quite fair in reducing his normal restocking charge by 40%.

And I think you've learned that if you think a particular piece of gear might not be exactly what you want, you should insist that the restocking charges and time period be written on your invoice. (Examples: Restock fee 5% first 48 hours, 15% up to ten days, 25% up to 60 days.) Ethical dealers will be happy to do that because it protects both them and you so there are no questions or disagreements later; you don't want to deal with the stores who refuse. Last, ALWAYS keep the box, manuals, and warranty card in mint condition during the trial period. You will need the box if you ever send the radio back to the manufacturer's service facility in the future.

Try a photo shop. They have heat resistant film that is glueable. They are called gelatins. Should have several different colors available. If not try a local school that put's on play's for the students. They use sheets of it for changing the colors of their big spot lights.

RL> That 3 >dB would increase our radiated signal in the antenna's best
RL> direction by >twice, or 200 watts. Let's also assume that the
RL> efficiency of the antenna >only has a ratio of 50 percent. That
RL> means we lose 50 watts, but because >the antenna has 3 dB of gain,
RL> we end up with what we started at -- 100 watts >being radiated."

Roy, Maybe just a poor way of expressing it. I think what was
meant was ERP, Effective Radiation Power, when the number 200watts
is mentioned. Of course, I also think that what is sauce for the
goose is sauce for the gander: 50% efficiency also means that
ERP has to be hit by the same amount, i.e. ERP is 100 watts.
Somehow the author ended up with the same ERP via a strange
way of arriving at it.

Every once in awhile CQ misses a mailing to me. I still don't
have the April issue.

4014. New FM/ATV Repeater Coordination Body for EPA/SNJ

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-24 14:18:48 UTC
From: depolo@red.seas.upenn.edu
Message-ID: <3kukc8$6i8@netnews.upenn.edu>
Source record: 250110
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy

This is a press release issued by the Area Repeater Coordination Council
for Eastern Pennsylvania and Southern New Jersey. It is asked that
it be distributed in full by electronic and printed means, particularly
through local amateur radio club newsletters in the EPA/SNJ region.

----

24 March 95

NEW COORDINATION GROUP BEING FORMED

FM repeater coordination for the Eastern Pennsylvania and Southern
New Jersey ARRL Sections has been the province of The Philadelphia
Area Repeater Council (TPARC) but, because of longstanding
problems with the operation of TPARC, a new coordination group is
now in the process of being formed.

The repeater community had long been concerned with the shortcomings
of TPARC and lost coordinations, inaccuracies in the repeater directory,
consistent failures to respond to correspondence and other problems have
been endemic. The organization's structure has provided no opportunity
at all for the repeater community to have any voice in the way repeater
frequency coordination has been managed. Under TPARC, frequency
coordination has been in the hands of five self-appointed individuals
whose operations have been closed to outside participation.

When efforts to change the present system failed, a new frequency
coordination group was announced in February following a meeting attended
by a large and representative cross-section of repeater owners and
operators on February 11 at Fort Washington. To be known as the "Area
Frequency Coordination Council of EPA/SNJ" (or "ARCC"), the new group
is expected to complete its organization in May.

Under ARCC, frequency coordination will be re-formed as a membership-
supported system which will be far more open, representative,
participatory and accountable to the repeater provider community.

ARCC currently has five task forces working to complete its formation
and these five task forces and their chairmen include:

Transition Operations: Gene Pressler, W3ZXV
This is operating as a clearinghouse for all the other task
forces and is responsible for communicating their findings
and recommendations to the entire membership.

Constitution and By-Laws: Steve White, WA3IAO
This group is developing a final draft of a constitution and by-laws and preparing papers for incorporation and non-profit tax exemption status.

Financing and Dues: Vince Bardsley, KB3OM
Under KB3OM as interim treasurer, this group's function is to establish a solid financial base for the future operations of ARCC.

Coordination Policies and Procedures: Ron Raymond, K3LPR
This Task Force is formulating recommendations for coordination policies and how these will be established and followed by the new organization.

Coordination Database: Jeff DePolo, WN3A
Working with the above Task Force, WN3A is working to compile the results of a recently-mailed survey of existing repeaters and, from that, build a complete and accurate coordination database.

In the weeks following the original Fort Washington meeting, a mailing list including nearly every known repeater owner/operator in the EPA/SNJ areas has been developed and announcements of the new group's formation have been mailed to each of them. In addition, substantial start-up and operating funds have been voluntarily contributed by area radio clubs and individuals to help finance the new organization.

Because ARCC is being designed as an open organization, anyone interested in repeater operations has been invited to join in supporting this effort. For further information, please contact:

Gene Pressler, W3ZXV,
1746 Norristown Road
Maple Glen, PA 19002
Telephone: 215/646-5892
FAX: 215/646-6798.

JJ> non-licensed ham could give it a try with a control operator
JJ> present.

How about the more general question: anyone, licensed or not,
may talk on the mike of an amateur station, provided the
station is under the control of a properly licensed operator.

Is this true also of CW? I.e., may an unlicensed person operate
the key of an amateur station provided the properly licensed
operator in control of the station is present?

Extended Warranties are a rip-off. Just read Consumer Reports. The warranties are only good during the first two to three years when you would expect the radio NOT to fail. Notice, you can't come in and buy a warranty after you have had the radio for five years. They know the chances are much greater the radio will fail after you have had it awhile. They are also betting the radio will not fail during the first

two or three years.

As for returning the radio two or three times before you got one that worked. If people would stay away from buying that Korean junk from Tandy, they would not have these problems.

As for taking the radio to a local store and dropping it off. Do you know what happens to your radio then? If the city has a local repair center, this is what happens. The manager or another employee leaves your radio sit around for a few days until they are ready to take all the repairs to the repair depot. Then, they pile all the stuff into the car and drive it to the center. It is not packed and protected. With a little handheld, chances are that it is getting bounced around the trunk on its trip to and from the repair depot. I would rather pack and ship it to the West coast. At least it will be protected during the trip.

Buy quality from a real ham radio dealer. Stay away from the Ft. Worth distributed junk.

Duffy

: too!

Mine puts out 25 watts! I couldn't believe it, but it's true.
I run it straight off the battery in the car, and I get a solid
25 watt output. With the 10 foot tower I've mounted on the trunk
lid and the 7-element Yagi, I can get in almost anywhere. The
rotor control software was a royal pain to write because I had to
install several accelerometers in the tower legs to compensate for
the yaw, pitch, and roll of the car. The other thing that is a bit
annoying is that I have to crank the tower down when I go through
toll-booths and under bridges. Also, cornering is tricky, I have
to get the passengers to move over to the other side of the car.
But the effort was well worth it---I have the best mobile station
anyone could hope for!

No hotter than my Alinco. But then, this unit seems to have more metal
than my Alinco. The HTX-202 feels more like a commercial HT.

>No, it comes with a case of freeze spray. When it gets too warm, you just
>'hose' it down... ;-)

Laugh all you want. Now that I have the HTX-202, I know what a real 2M
ham radio is like! And I could buy two of them for the price of those
"wide band" intermod models. Besides, I already own the world's finest
scanner.

I live in the Idaho Falls, and I am interested in getting started in amateur radio. I have an extensive background in radar already, and I am mainly interested in designing and constructing new types of equipment. If anyone has similar interests or would like to tell me how to get started in the licensing process, I would appreciate it.

I'd worry about that. You are driving the final too hard. If
you try using it in the car it will see more than 14 volts.
That final will have a very short life (although quite a
spectacular ending). You should check the current drain when
it is putting out 10 watts, and adjust the drive so that
there is no more than 1.8 (guessing here) amps.

There's the USECA (Utica-Shelby Emergency Communications Association)
club Field Day near Romeo, MI. USECA is a large but very friendly
club. The folks there will make you feel right at home. There will
be LOTS of opportunities to operate. Last year we ran 16A and finished
VERY WELL in the points. (See Nov 94 QST. The glowing tent on the
cover belongs to Scott KG8IE). Call Arpad WY8M 810-751-3804 for more.
We also have a pre-field day shakedown run and social event at Stoney
Creek metro park in the Winter Cove picnic area on May 13. Food, fun
and radio. (Last year we ran somehing like 7A for the shakedown) Call
Ann KG8IF at 810-739-2448 for details. The club maintains a wide
coverage repeater on 147.180+(100Hz pl). Drop by and chat a while.

I also use _Now You're Talkin_ as a study guide for my technician and I
recommend it to others strongly. I use an Ameco book for General, and I
wasn't overly impressed with it. I use the ARRL study guides for
Advanced and Extra (just pass the written and missed the code.) The
explanations are done pretty well. I feel I have a better understanding
of many areas I have not tried yet. They are only $8 I think, and they
are well worth the money.

_Now You're Talking_ is good for about all ages and expertice levels. I
read it cover to cover before taking my first test. I am a strong
believer in learning material for tests of any sort. Memorizing
questions takes much more time than learning concepts and ideas.

: take any more than a few hours distributed over the weekend.

I like going to a field day operation that is somewhere that a station
normally doesn't operate. The fellowship, fun and even the food are
plenty of reason to get on. I like to work pileups also where I'm being
called. I've become pretty good on SSB, though I tend search and pounce
on CW as I'm not as proficient.

: I also run contests, but not for the score, just because so many
: stations are on the air. This is a great way to advance my DXCC

Same reason I run contests. They are fun too. Beats fighting for a new
country (or state on some bands) under non-contest pileups. I've worked
stations in contests from a dinky home station with wire dipoles that I
never though I could.

I think the more plausible reason I've heard is that the embedded base of
AM radios in aircraft is so great that the FAA has never seriously considered
moving to another modulation scheme. AM does work fairly well in the mode
that it is used in aircraft, so no doubt the Feds have adopted an "if it ain't
broke, don't fix it" attitude. I was in New Zealand a few years back and
found they use FM in aircraft. Pilots were shocked to learn we were still
using such an "antiquated" scheme here in in the states...

> All those things would be covered by the TSP.

Sounds like you had quite a bit of bad luck with that Icom. How many of the problems with the Icom were a result of poor manufacturing? I really don't want to go passing judgement, but it sounds as though you weren't treating the Icom like a $500 investment should be treated. I am of the belief that a radio should be considered for the quality and features that it possesses, not the insurance policy that can be purchased along with it. The insurance plan idea reminds me of "The Good Guys" and "Circuit City" where the companies make MUCH more profit off of the unsuspecting consumer through sales of insurance than sales of equipment. When properly treated and cared for, electronic equipment tends not to just fail outright.

I suppose if one needs to insure against their own clumsiness, something like the TSP might be good for them. For me, I've never had a problem with my HTs related to my clumsiness. For that matter, I've never had a problem with my HTs... Icom, Kenwood or Yaesu.

California allows up to 7 characters on plates, now, and these are all valid plates as far as I know. Perhaps the 7 character ones don't allow spaces, though.

37,

Chris
- - - -

But Doesn't CA DMV disallow use of patterns which are similar to amateur radio callsigns for its vanity plates?

I believe I heard from a pal who tried this but was rejected at the time of
his application. An actual check or attempt would be more helpful than my speculation, I know.

MF>or not Bob can transfer his old copy of Windoze to Jonathan? (For
MF>more thoughts on net.lawyers, see the .sig quote below.)

MF>- Mark

Hi, I'm probably sending this to the wrong sender, but,

Windows 3.1 and Windows for Workgroups are two different products.

So The license agreement for one has nothing to do with the other.
The was a minor upgrade to Win 3.1 to 3.11 that's the upgrade.

A weird coincidence (not unusual for Microsoft after all) to have the
version numbers the same.

Regards,

Werner

>my published list of recommended dealers immediately too.

Good grief! Do you go to Sears, buy a tool, use it for a project then
decide it's not worth the money and return it?

I can see why ham stores do this! If I buy a radio and use it for a
few days and return it, the dealer can't sell it as new. THAT's one
reason why they charge the restocking fee. The other reason is that
they are not a rental store, nor to they have a free trial period. The
threat of the restocking fee keeps people from borrowing gear for a
few days.

You buy a radio, if you don't like it, tough, eat the restocking
fee. You should have used it at the store a bit (or asked about it on
usenet) before you plunked down your cash. All the ham dealers I've
been to have all their rigs on display in an operational state
(antenna and all).

Exceptions to this idea are radios that are dead out of the box, a
case where you've returned two or three DOA radios, or VERY good
customers of the store.

[[EXAMNT3.24W : 3846 in EXAMNT3.24W]]

* Effective - December 20, 1994, prospective licensees and upgraders
can call the FCC at 1-800-322-1117 to learn whether or not their pending
FCC Form 610 license application has been processed, and if a new
license has been granted. If a new license has been granted, the person
can begin immediate on-the-air operation (using their FCC-issued call
sign) with the privileges of the new license as indicated by the FCC
(during the telephone inquiry). The hardcopy (printed) license would
follow shortly after the license grant is indicated in the FCC Amateur
Service data base.

* News Flash * Effective December 1, 1994, FCC began accepting
Form 610 data electronically from the ARRL, W5YI and Sunnyvale VECs.
Four more VECs should also be doing so shortly.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 23-26 days. This includes 5 days between the
VE team and the VEC; 1-2 days at the VEC (in some cases the same day);
and 16-19 days at the FCC.

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT
PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 203-666-1541 x282 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "bjahnke@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 203-666-1541 x219. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "rwhite@arrl.org" or via MCI Mail to MCI ID: 215-5052.

Attention all SCANDINAVIANS ;-)

I'm looking for names and addresses (tel and faxnumbers) to national
HAM, electronics, science or technical magazines published in Denmark,
Norway, Iceland and Finland...

If you could help me with this please reply...

PS! I'm sorry to use an International group for this but I couldn't

find any Scandinavian group with a correct carter...

Thanks in advance,

/Christer

I was amazed how few people in college (Graduated 7 months ago)
believed this! It was all formulas! I always found it easier to learn
and remember something by understanding the basics (ohm's law) and
then understanding what I could do with it. Thevinen's theorem is not
some formula, it's an idea!

But sometimes examples are the best way to learn. Look at the
question, read the answer, understand why the answer is what it
is. Next time you won't need to read the answer, you'll know it!

I am concerned about that; however, I've never seen it go over 10w
in the car. Another thing, since I'm not the only one out here
getting 10 watts and there are a lot of these on the market, AND
I've never heard of blown final problems, maybe my worrys are
unfounded. At any rate, you bring up a good point and I'd like
for someone more technical than myself to comment on it.

>Together they make a formidable pair, but I wouldn't trade one for the other.

[sorry for the total followup-quote, but it's relevant]

I agree with you - in order to use an HF DSP filter, you need a
relatively selective rig. If you try to use an SSB filter for CW, and
get a DSP to fix it, it won't work. Especially if you have a rig with
AGC. All of a sudden, you will lose your intended signal, because the
offending station is booming in. You really need to get a filter that
is ideal for the mode that you are trying to use.

I have some WAV files that you can get that will show before/after
results, if anyone's interested.

If you want to experiment with DSP, you might want to get the 59+.
It's infinitely variable, or close, and it's a superior product. But
if you want to work a contest, where you don't have time for
infinitely variable things, I have to recommend the 9+ as a "must-buy"
for anyone who wants to augment their contest setup. It's a
button-pusher's delight: "make this work!" and it does.

By the way, when I switch it on, it makes it so that other hams (or
aspiring hams) in the shack can copy code that is being sent.

>
Perhaps the article in QST (Oct '88) "Emergency Communication: Is it
legal?", by Edward Mitchell, WA6AOD, could be of interest to anyone on the
subject...

I've got a copy of it in 'electronic form', if anyone wants I could email it
to (I believe you'll find it on the ARRL server too...)

In it, it reads:

" The key words that define an emergency are "immediate safety of
life of individuals or the immediate protection of property." Obvious
examples of an emergency include natural disasters - such as
tornadoes, hurricanes, blizzards, floods - and other forms of severe
weather, forest fires, land slides, and earthquakes, all of which
typically cause immediate danger to both life and property."

But here's -my- humble opnion on the subject of emerg comms:

If it will make a difference, and save a life and/or property. If -I- will
make a difference with hitting the PTT and requesting for aid, I will.

So what if you get slapped with a fine, get tossed in a cell and even your
licence got revoked? All these add up, can it be compared with saving
someones -life-?

"Erm, I can't transmit on -that- freq! I could get <fill in the above> -
Sorry, just lie there in your puddle of blood whist I try to hit the local
repeater..."

Perhaps I'm overly simplistic. But I rather regret the things I have done in
life, than regret those I did not do.

Just -my- opnion. Flames are welcomed on this subject.

NB: In Singapore, our amateur licence can be revoked/'not be renewed' by our licencing authority -without assigning any reason therefor-. They reserve that right to. I guess they make their job so much easier.

Realize, too, that the ham dealer is a specialty store that sells equipment on a relatively small margin, compared to those margins enjoyed by high-volume department stores such as aforementioned SEARS and Penney's. The typical ham dealer cannot operate his/her business the same way, and cannot afford a "no questions asked" type of return policy.

4049. Looking for ARES & RACES Groups

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-24 22:50:17 UTC
From: nacec@millcomm.com
Message-ID: <3kvib9$n22@news.millcomm.com>
Source record: 250048

I have put up a homepage on the WWW. Part of the function of this
homepage is to collect information on as many ARES and RACES groups
as possible. The data collected will be used for two things. First,
to make sure that any disaster relief agency or organization contacting
us for emergency communications support following a disaster is aware
of your group, its capabilities and has a point of contact. Secondly,
when we send our field team into the disaster area we will want them
to contact your group so that we may work to ensure the most rapid
and best deployment of our commercial emergency communications systems.

NACEC is still in the planning and building phase and we hope to
establish a solid and mutually benificial working relationship with
the Amateur Radio Community throughout North America.

Please visit our home page at:

http://www.winternet.com/~nacec/index.html

If you would like to get involved in helping us move this project
on line, please drop me an email message. We could use your help.

NACEC is not compeeting or attempting to replace the critically important
local emergency communications support services provided by the Amateur
Radio community. We are here to make it stronger and together better
serve the needs of the disaster survivors

Thanks

73

Edward Addy / KE0EG
NACEC Minneapolis

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 24/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 24 MARCH AND FORECAST FOR 25 MARCH - 27 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 95/41

GOES satellite data for 23 Mar
Daily Proton Fluence >1 MeV: 1.2E+06
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 4.9E+07 (normal)
X-ray background: B2.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
25 Mar 26 Mar 27 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 25 Mar: 95/41

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 23 Mar
Learmonth 7 3231 2211
Fredericksburg 5 5
Planetary 8 7

Observed Kp for 23 Mar: 1112 3323
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
25 Mar 10 Quiet to unsettled
26 Mar 15 Mostly unsettled, with brief active periods possible.
27 Mar 25 Unsettled to active, with possible isolated minor
storm periods.

COMMENT: IPS Geomagnetic Disturbance Warning 95/08 was issued on 24 March
for the interval of 26 - 31 March.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
24 Mar normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Mar normal normal normal
26 Mar normal normal normal-fair
27 Mar normal normal-fair fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
24 Mar 54 15 to 30% above predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
25 Mar 45 About 15% above predicted monthly values
26 Mar 30 Near predicted monthly values
27 Mar 30 Near predicted monthly values

COMMENT: Observed Townsville and Hobart frequencies: near predicted
monthly values.

4051. re: out-of-band, emergency, etc.

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-25 00:43:23 UTC
From: NFullagar@ccgate.apl.COM
Message-ID: <9502247960.AA796092370@ccgate.apl.com>
Source record: 250050

>I've followed this ridiculous thread for at least 2 1/2 years. Rather than trying to find loopholes in the law so you can satisfy this inner desire to have a police-capable radio, why not instead arm yourself with a repeater directory and a cell phone?

Golly gee, someone with an *even more* perverse and morbid facination with the thread than my own! I'll certainly agree that there's been a lot of absurdities put forth, from various quarters.

>Rather than trying to find loopholes in the law so you can satisfy this inner desire to have a police-capable radio,

I don't see it as finding loophole. The law seems clear enough and if it weren't, who cares? Let's say you've bought a mod'd HT at a hamfest. You didn't but it to xmit on the state police frequency, but you know it will. Are you saying you'll stand there and say "Gee, I could lose my license if I transmit out of band" while someone bleeds to death before your eyes? If so, I'm real sorry to hear that.

Is it just FFC regs that are too sacred to violate? Would you break into a house that you knew contained a landline phone to report a life-threatening emergency if there were no other means readily available?

Of course I would use other available resources first, but in a *real* emergency I'll do what needs to be done and deal with the consequences later. My guess is you would, too.

> why not instead arm yourself
with a repeater directory and a cell phone?

I have both, as a matter of fact. And I take them with me when I travel. And often I carry BOTH an HT and a cell phone on my bicycle. But there's an awful lot of road out there where there's no cell service, despite cellular industry talk about "statewide coverage" and such.

And numerous repeaters require (unpublished) PL tones. (Actually, that brings up an interesting point - why on earth does the ARRL accept director listings of "open" repeaters that specify that a tone is required but don't specify the tone??) And a ham repeater isn't much use in an emergency unless there's someone else there to talk to - someone who isn't also mobile, miles from a phone.

Personally, I intend to make the mods to my HT and VHF/UHF mobile, not so I can transmit out of band but so I can receive. I would like to see the manufacturers design things so an rx mod could be done without the tx mod. To avoid accidentally xmitting where I don't mean to, I'll have to do some creative frequency split programming - which I'll do.

>Jeff NH6IL (who carries a 200W 162.55 MHz transmitter with 1050 Hz tone encoder with him so he can activate all weather radios within a 20 mile radius `just in case'.)

Gosh, I hadn't thought of that... What kind of batteries do you use?

SB PROP @ ARL $ARLP014
ARLP014 Propagation de KT7H

ZCZC AP82
QST de W1AW
Propagation Forecast Bulletin 14 ARLP014
From Tad Cook, KT7H
Seattle, WA March 24, 1995
To all radio amateurs

SB PROP ARL ARLP014
ARLP014 Propagation de KT7H

Solar flux averaged about 10 points higher this week than last.
Combined with quiet geomagnetic conditions, this generated good
conditions.

Propagation should remain good through the WPX SSB contest this
weekend. A recurring coronal hole may affect the end of the
contest, although the full force probably won't be felt until
Monday.

After this weekend the solar flux should stay in the mid-80s over
the next month, with another possible disturbance around April 9.

Sunspot Numbers for March 16 through 22 were 19, 33, 71, 69, 63, 68
and 83, with a mean of 58. 10.7 cm flux was 84.2, 83.4, 91.8, 84.2,
89, 90 and 93.5, with a mean of 88.

The path projection for this week is from middle of the continental
United States to France.

80 meters looks good from 0030 to 0630z, and 40 meters from 2330 to
0730. Check 30 meters from 2130 to 0500, and 20 meters from 1330 to
2200. 17 meters should be open from 1700 to 2000. On some days 15
meters may be open from 1800 to 2000. 12 and 10 meters do not look
good at this time.

Greetings from K2aym and N2jjj in Albany,NY,
We're travelling to Washington DC on 3/25 and would like to know
if there is a 2 meter repeater we can use with our handy-talkies
as we trek around the monuments and museums. If there is, we need
to know any protocol/etiquette in that area.

Would appreciate any info but please respond by email.

Thanks, and 73s

4057. Source For Nichrome Wire?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-25 02:06:44 UTC
From: jackl@pinetree.microserve.com
Message-ID: <3kvts8$s8e@news1.databank.com>
Source record: 250056

Anyone know where I can obtain a small quantity of 14 to 18 gauge nichrome wire? I'll be using it to tame parasitics in an old Gonset KW.

I tried salvaging this from a toaster, but it's impossible to solder after it's been oxidized by heat (even new toasters have been heated at least once).

Any and all help will be appreciated.

I can't hack a restocking fee. I think it should be like computer
stores, stores like Best Buy, etc. They all have a 30 day no questions
asked return policy.
Yes, they have to east some cost from time to time but the good will
is huge.
The percentage of returns is minuscule.
I won't buy if I can't return. Why should I? Many places allow it.

Reminds me of my experience as a kid, when I plugged a 9V transistor
radio into a 12V cigarette outlet. Played exceptionally well for two months.

You know, the fact that these rigs can so easily and conveniently be
mis-operated says a lot for never buying one used. Wonder if they'll all
drop dead in two or three years?

From: ac224@detroit.freenet.org
Message-ID: <3l020u$cj9@detroit.freenet.org>
Source record: 250060

Our club's repeater has fried it's final amplifier. It's a Micor and the
transistors are $40 each list from Motorola (six of them). We've heard
there are more reasonable civilian parts that are subs for the finals.
Does anyone have a source for these or know what the 2nxxx numbers are?
The Motorola parts are:
M1134 (finals, four of these)
M1133 (drivers, two of these)
M1132 (predriver, one)

From: jroudebu@popmail.mcs.com
Message-ID: <3l02qm$he2@News1.mcs.com>
Source record: 250062

A couple of years ago I had my 2 meter running packet and connected to a repeater that I could telnet from. I entered an address I
got from a local club meeting and ended up connecting to an "Internet Conference Bridge" from somewhere in Canada. I used
this to communicate with my brother in Ohio and we typed back and forth in real time. I have long since lost this address but wonder
now that I have an Internet connection can I ftp to this "conference bridge" without using my 2 meter and hopping from site to site to
get there?
Any help on this issue would be appreciated.

ARLX014 Ham-author to speak

Back for a return engagement at the 1995 Dayton Hamvention banquet on April 29 will be Cliff Stoll, K7TA, who wowed the Dayton crowd in 1993.

Stoll, who was profiled in August 1990 QST, became a best-selling author with the publication of his book ''The Cuckoo's Egg.'' He later portrayed himself in a Public Television episode of ''Nova'' that dramatized the events described in ''Egg.''

Doubleday has just published Stoll's second book, ''Silicon Snake Oil,'' that debunks many Internet myths and, according to Stoll, contains a number of references to his Amateur Radio career.

Cliff Stoll is 44 and holds a PhD in planetary science. He's been a licensed amateur since his teen-age days in Buffalo, New York. In ''Silicon Snake Oil'' he describes his earliest memories of his fascination with radio and his parents' reaction to their son's budding interest in science.

Stoll will sign copies of his book at the Books and Company Hamvention booth on Friday. A portion of the proceeds from sales at the Hamvention of ''Silicon Snake Oil'' will be donated to the American Red Cross Disaster Relief Services.

ARLX015 Awards clarification

A March 20 bulletin announcing the 1995 Dayton Hamvention major
award winners was incomplete.

For five of the past six years, an ARRL official or employee has
been the Hamvention's Amateur of the Year. In addition to the 1995
Hamvention Amateur of the Year, Rosalie White, WA1STO, they include
ARRL Hudson Division Director Steve Mendelsohn, WA2DHF (1990);
retired ARRL General Manager (and now International Amateur Radio
Union President) Dick Baldwin, W1RU (1992); former ARRL director and
now president emeritus Harry J. Dannals, W2HD (1993); and retired
ARRL Washington Area Coordinator Perry Williams, W1UED (1994).

Harry Dannals was inadvertently omitted from the earlier bulletin.

[Article crossposted from rec.radio.scanner]
[Author was Richard Delaney (delaney@j51.com)]
[Posted on 24 Mar 1995 23:11:01 GMT]

I picked up a Motorola HT200 radio at a hamfest with a charger for a steal ($5) thinking I could maybe put mu local PD or Ambulance freq in it (155. or 156. mhz) incase of somesort of life-or-death emerg. Can anyone tell me about this radio, I opened it up and saw a crystal in it for 146.94mhz, was this a ham rig to start, or did someone retune it?
The crystal looks like a regular scanner crystal (like RS ones), is that what it is? I can't get it to charge, so I'm going to try feeding power from a supply into it directly.

Thanks

: >X-500 at 18 feet).
: >
: >Any other suggestions?

: The Cushcraft 4-pole is a piece of crap, and the Diamond is subject
: to lightning damage, and UV damage to the radome. The Comet repeater/
: base antenna is better, but the wind will whip it around a lot. I've
: had one at 970 feet on a TV tower for 4 years now, it's got burns all
: over it from lightning strikes, it bends nearly flat in heavy winds,
: but it's still working. For the $124 I paid, it's *Recomended*.

As a general rule I stick with comercial grade antennas. Decibel,
Cellwave, Scala, Antenna Specialist. Antennas like Cushcraft will not hold
up.

Though the Local Packet people have had good luck with Diamonds I will be
sticking with my known winners.

I just would not bother with a regular "HAM Antenna" on a repeater.

Once upon a time I held a Tech license that consisted of the General theory and 5 WPM Code (in a time before no code and tech plus). I had always planned to practice code and pass my 13 WPM for a full General license. If I had, it would have been to no avail as I sent my renewal in one time and didn't think about the fact that it didn't come back until it was too late and my license had lapsed. So here it is a few years down the road and I saw a flyer about a test being given. I tell my father and friends that I am going to go take my test again since I don't have to learn the code. I am warned about the fact that I will be looked down on for not taking the code. Truth is, I don't have time to learn the code before the test and I can always relearn it later. Or so I thought.

I've never been turned off so fast by anything before in my life. The statements about people with no-code tech licenses not "knowing" about propagation or any other aspect of the hobby for that matter may all be true. But each of us have aspects about amateur radio that we don't truly know or understand. I think that is why there are higher classes to be achieved. The higher the license class, the harder the test, the better the reward is; more bandwidth. There is not an

operater out there that was born knowing all. They learned it as they went whether it was through reading, classes, or other hams.

I had a true desire to get back into the hobby. I have been reading this newsgroup since about test day. By the time I received my license I had all but lost interest again. I have no desire to spend money on new equipment (my last purchase was a Drake TR-33C) to find out if this attitude is prevalent here locally. If half of the energy that is spent pointing out how the no-code tech class license is a lowering of the standards was spent encouraging these people who are showing some interest into furthering their knowledge and skills, then amateur radio would begin to flourish instead of losing interest.

I never wanted to build a radio or design circuitry. I wanted to participate in a communications hobby that had structure and class. I was willing to learn some electronics, morse code, and practice some ethics to do so. Apparently that just isn't enough for some.

Cassandra

A college amateur radio club placed first in a contest category which
required the use of a handheld transceiver and a vertical whip antenna.
Their handheld was attached to an Alpha linear and directly to a
full-wave vertical tower. The next year, the rules were made more
explicit.
--scott

Eight watts indeed. Sniff.

For a contrary view, you might want to read the recent QST
review of this receiver. They report significant performance
problems.

This derives from an OSHA requirement. The maximum field strength that
a worker can be exposed to is 10 mW/cm^2. The industry has determined
that a handheld running more than 8 watts will exceed this exposure
level a signifcant part of the time. So they've voluntarily limited
output to 8 watts. In cellular phone usage, where the antenna is
right next to the head, and exposures are typically longer, the power
limit has been set at 0.6 watt.

>
>Where is Gary? :-)

Present. :-)

I'd strongly suggest not to operate the HTX202 at elevated voltage
levels. The SWR protection for a handheld is typically achieved by
running the final well below it's maximum ratings. This eliminates
the need for a SWR shutdown circuit in the radio. If you run the
radio at elevated voltages, you run the risk that a higher than
normal SWR will exceed the Vce rating of the transistor. And the
extra heat of operation can exceed the junction thermal limits.
Remember that 10 watts is only half an S-unit better than the
rated output of the HT, and isn't worth frying the unit to
achieve.

>circiut <from hamcomm program>

A dummy plug in the external microphone jack will disable the internal
microphone. A 10k resistor switched to ground via a key, or keying
circuit, from that dummy plug will key the radio for CW transmission.
You can't send very fast Morse that way, however, because the PTT circuit
of the Icom is rather slow (about 50 ms).

>2. Is it illegal to let some non-ham use autopatch if i'm right there with that
>person?

No, that's Ok. You're handling third party traffic already by using a
phone patch. It's permissable to allow a non-ham to speak into the radio
under your supervision, but they can't actually operate the radio, IE
change frequency, power, etc. You must maintain control of the transmissions.
One caveat, for *international* third party communications, you must be
sure that there is a third party agreement with the country in question
before allowing a non-ham to speak over the radio. For domestic operations,
there's no problem.

>3. where the Heck do i get aluminum solder?

It's available at electronic supply houses, and many home improvement
and hardware stores, even some auto parts places.

>4. what are the RTTY-BAUDOT freqs on 2m IF any

This is local option.

>5. what are the normal EME freqs? any from 144-144.21?

Most weak signal contacts are done near 144.200 MHz. But check
the schedule of any announced EME operation to determine their
actual operating frequency.

The most obvious reason to modify a 2 meter rig is if you are
contemplating illegal operation. Since that reflects badly
on legal amateurs, I don't think it's a good idea to help you.

If you want to include a call sign next time, and indicate a
legal reason for a modification, then some help will be forth
coming.

>related to my clumsiness. For that matter, I've never had a problem with my
>HTs... Icom, Kenwood or Yaesu.

Ken, portable radio equipment needs to be designed to take the kind of abuse that is normal for such equipment. The more the radio costs, the better it should take such treatment (IMHO). The ultimate examples of good HT design, the Moto HT220 and GE Mastr Pro, can be used to drive nails, club a bad guy, or chock a truck, and still work. Even lesser radios should tolerate being dropped occasionally. Anything less is unacceptable in a working tool that will be used in a field environment. If you have to treat the radio as a fragile egg rather than as a working tool, what good is it?

Now a cheap radio can't be expected to perform so well, so a service plan may be a good idea if it doesn't boost the cost up into the range of a more expensive radio. This is the case for the TSP policy.

The downside is that the radio may fail you when you need it most,
but the upside is that you can get it repaired for no extra charge.

PS The Icom battery rail problem is a known and chronic one. It's
a scandal that Icom won't fix this serious design problem for free.
The IC-2AT didn't have this problem. It had metal battery rails
that didn't fail from normal use.

That's fine, Ron, if you have a kilobuck to spend on an antenna. My entire repeater doesn't have that much invested. It's futile to try to move a commercial antenna, such as those you mention, into the ham bands. You'll never get the designed pattern even if you manage to get a decent SWR curve (unless you rebuild every bit of the antenna, and then you might as well call it homebrew). So you have to buy a new one made for your frequency, and that's a kilobuck solution. If an amateur antenna can take the abuse, and the Comet can (at least in our climate), that's a much cheaper solution.

I've done some limited field strength comparisons between my machine and a commercial machine using a Cellwave antenna on the same tower. The differences are negligible. Everywhere I can hit the commercial machine, I can also hit the amateur machine. If we suffered frequent heavy icing, I might bite the bullet and get a Cellwave, but we don't, and so the Comet is fine. The Comet has survived two major ice storms, however, and might still be the better choice.

I can't help with equivalent parts, but I'd like to point out that
you can often find entire Micors for under $50. It makes sense to
just buy a radio and swap out the entire PA deck rather than try
to repair one as extensively damaged as yours.

This morning, I did some current measurements. At 12v, the HTX202 drew
1.25 amps and produced 8 watts. At 13v, it drew 1.4 amps and produced
9 watts. I did not try 13.8/14 because my supply won't go that high
but I have observed 10 watts on my meter in the car. My guess is that
the HT draws somewhere around 1.55 amps at 14v. To compare, my Alinco
HT draws 1 amp and produces 5 watts. Theas measurements were taken with
the HTs transmitting into a discone with an SWR of about 1.3. In my car,
the SWR is about 1.2.

Don't let the few blow hards such as the misfits from Brown spoil your
interest. They are an extremely small minority and are similar to the
loud bigots one hears on 11 meters. If they can't stand on their own merits
and must stoop to denigrating you to boost themselves up, they aren't
worth your time. Ignore them and associate with those that respect you for
what you are, an amateur radio operator. Check out some of the local clubs
before giving up on amateur radio. I think you'll find that you'll be
welcomed with open arms. Another place to look for friendly operators is
to the VHF/UHF weak signal crowd and the satellite operators. I also
suspect that you'd be welcomed by most repeater groups.

Try it before letting the likes of Michael chase you away and relish in
the thought that he's in Rhode Island and not Ohio!

Why mess around with 2M FM? Why out here in the west, our club station is a Cadillac El Dorado four-door, with not one but _FOUR_ ten-foot towers (one at each corner), and four TS-50's, one in front of each seat. Just wait until you hear our booming "multi multi mobile" signal in the next DX contest!

4095. Re: W5YI Files Petition for FCC Rulemaking.

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-25 17:20:20 UTC
From: padawer@usit.net
Message-ID: <3l1jck$5lg@news.usit.net>
Source record: 249995

Whoever mentioned that Fred was doing this out of the goodness of his heart is a bit misled. Fred knows that if he can stop Newsline and other entertaining ham bulletins he will be able to sell more of his "W5YI Report" via the slower U.S. Mail. Frankly, with such high quality over-the-air ham bulletins, why in the world do we need the W5YI Report anyway? Just think, though, how much more important Fred's rag will be if his petition goes through. Give us a break, Fred; we understand what's ::really:: at stake.

Will be in Edinburgh for a week at the end of the month and would like to blather with any local hams so inclined. I've lost contact with the chaps I knew in my GM5DUD (great call, eh?) days. Will be meandering about the Biggar, Penicuik, Edinburgh area and would be amenable to a pint of Belhaven and a ragchew about DX or what-have-you...

Sure. There's a keyboard sequence to enable extended receive (including 800 Mhz). Most dealers will have it and it's also published in some guides and on some of the ham radio CD-ROMs. I can look it up somehwre if you can't find it.

Also, there's a hardware mod to enable extended transmit. It involves adding a couple of surface-mount diodes. I have a couple I can sell you CHEAP. I bought them from Icom when I had a W2A.

>Hi Jeff,
>In 1906 there were no prosigns (procedure signals). That term was
>originally coined in military comm circles much later on.

Morning Hans,
My references are sitting right in front of me. The very first international radio conference was in Berlin, 1903, attended by Germany, US, Italy, Great Britain, France, Hungary, Spain, Russia, and Austria. The major topics were on-the-air protocol, and the destructive practices of the Marconi Company (a whole story in itself concerning the evils of Marconi). The 1904 conference had to be delayed until 1906 due to the Russo-Japanese War.

The 1906 International Conference (also held in Berlin) was attended by 21 nations. Further discussion of how the Marconi Company was distroying the effectiveness of high seas wireless continued. Also duscussed was implimenting a common distress `signal' (I referred to it as a prosign, using today's terminology) to replace the CQD previously used. Distress procedures were set up along with technical standards of apparatus, licensing operators (requiring certain technical proficiency, knowledge of regulations, and 20wpm code speed), maximum allowable power to reduce the massive congestion present, ceasation of on-the-air operator practice, unnecessary testing, and `rag chewing'.

Hi Jack: You should get on HF more often! From my own experience
if 40 is open then so is 30.

Not too many emergencies will be handled on 20 and 15 but if those
bands are open and have contests then certaily 17 will be open
and will also be nice and quiet for your emergency.

You have my personal guarantee.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 25/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 25 MARCH AND FORECAST FOR 26 MARCH - 28 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 92/37

GOES satellite data for 24 Mar
Daily Proton Fluence >1 MeV: /////
Daily Proton Fluence >10 MeV: /////
Daily Electron Fluence >2 MeV: ///// (normal)
X-ray background: /////
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
26 Mar 27 Mar 28 Mar
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 26 Mar: 95/41

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 24 Mar
Learmonth 5 2222 1111
Fredericksburg 4 6
Planetary 9 5

Observed Kp for 24 Mar: 2111 2221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
26 Mar 12 Quiet to unsettled, with possible brief active
periods.
27 Mar 20 Unsettled to active, with possible isolated minor
storm periods.
28 Mar 25 Unsettled to active, with possible isolated minor
storm periods.
COMMENT: IPS Geomagnetic Disturbance Warning 95/08 was issued on 24
March for the interval of 26 - 31 March.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
25 Mar normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Mar normal normal normal
27 Mar normal normal normal-fair
28 Mar normal normal-fair fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
25 Mar 54 15 to 30% enhanced, spread F was observed during
local night.

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
26 Mar 50 15 to 30% above predicted monthly values
27 Mar 30 Near predicted monthly values
28 Mar 30 Near predicted monthly values
COMMENT: Observed Townsville and Hobart frequencies: near predicted
monthly values.

This may be too obvious, but if you are not using some sort of 'grounding
strap' e.g the braid of a piece of coax, you wont get any true grounding
of rf.

We've been told that this is not the case... That Micors in the ham band
frequency range are few and far between (we have been looking for one
at the ham swaps) and go for quite a lot more than $50. We've also
been told that to change the frequency of a Micor amp involves more
parts changing than it's worth.

)In article <3ko2gk$osl@gorgor.pa.tetherless.com> Mark Oppenheim <Mark@Tetherless.com>
writes:
)>ACSB has not lived up to it's promise of being this big-time
)>replacement for FM. It's a good mode, but for some reason or
)>another, it just hasn't taken off. Hopefully it's use in the
)>220 MHz band will spur some of this on, I'd sure like to see it.
)>It's been around for what, 12-15 years, and still somewhat in it's
)>infancy.
)
)For amateurs, ACSB has little to offer over ordinary SSB. The
)pilot tone allows automatic tuning, but hams are used to tuning
)in SSB signals, so that's not the important advantage to hams
)that it is for commercial two-way users.

ACSB versus FM would be interesting if REPEATER operation were used, in
that it would significantly reduce signal bandwidth requirements versus
FM. Now it is all well and good that hams can tune SSB, but it is not so
easy for them to tune their transmitted frequency to match a repeater's
receiver, or for the repeater's receiver to autotune to the ham's signal.

That nice pilot tone provides a way for the repeater to tune properly as
well.

) And the 2x compandoring
)has been surpassed as a way of dealing with the noise floor by DSP
)processing techniques that will work with ordinary SSB.
)
)I suspect ACSB missed it's window of opportunity about 10 years
)ago and is now a dead horse.

I suspect you're right, especially given the expense issues. It's more
likely that various spread spectrum techniques, likely with DSP at the RF
stages, will be the future technology, not ACSB.

)
)Anything with a computing device needs Part 15 certification (at
)least for now, the FCC has announced plans to relax that).

I didn't read the same thing into the FCC's NPRM. What I read was
that they were going to relax the REPORTING rules such that a device
which has been tested and shown to meet Part 15 could then be sold
without waiting for the paperwork to be processed and approved by
the FCC.

There is not going to be a significant change in the part 15 emissions
of computer devices, especially any sold into Europe. Devices have to
meet much tighter standards to be sold in Europe than they do to pass
FCC part 15.

)--

You should check and see if you have a theatrical supply house in your area, or call a local theater (performing arts kind, not movie house) and find out where they buy gels. You can get gel material in just about any color of the rainbow. The stuff is used to color stage lighting.

Hope that helps!

>radiation and can occur just as easily with a 1:1 VSWR as a
>10:1 VSWR.
>

Hi Todd:

First, let's be certain we are using the same definition for "RF in the shack". For purposes of this discussion, my meaning has been "the undesired presence of RF on equipment chassis including tuner, rig, microphone, keyer etc." Helping these operators rid their equipment of this phenomenon was my goal in posting all preceding information. Although related, the presence of RF as one might measure it with a field strength meter was not complained of, and was not discussed.

In any event, your contention that feedline radiation occurs just as easily with a 1:1 VSWR as a 10:1 VSWR is untrue. If a coaxial feedline is attached to a balun at the center of a balanced, resonant antenna, and the VSWR throughout the system is 1:1, an insignificant amount of RF will flow on the outer shield of the coax. Conversely, if the same feedline is connected to the center of a non-resonant dipole, and the balun is unable to cope with the reactance (or if no balun is used), considerable RF will flow on the outer shield of the feedline.

Systems employing a balanced feedline can exhibit similar symptoms if the system becomes unbalanced. Among other things, an imbalance can occur any time an attempt is made to feed the unbalanced output of an antenna tuner to a toroidal balun, and then to balanced line which feeds a non-resonant dipole. This is similar to the second situation described in the previous paragraph. In this configuration, the balun operates under conditions far removed from it's design parameters and often fails to provide either impedance matching or balance.

>
>I think everyone here would be interested in hearing how you
>turned a 50' dipole into an efficient antenna system on 160M.
>Feedline losses are only a part of the picture with respect to
>antenna system efficiency.
>

You are correct, of course. Feedline losses are only part of the picture. Other factors include ohmic losses in the tuner, the balun and perhaps even the antenna itself, depending on wire gauge. Before condemning the efficiency of shortened antennas, however, I suggest you review the many articles on this subject by Jerry Sevick. To summarize only a small part of his work, the failure of shortened antennas to perform adequately is nearly always due to factors other than the antenna itself. Although much of Mr. Sevick's work has been with shortened verticals, it is not unreasonable to suggest that horizontal antennas as small as one-half their original size or less can perform exceedingly well if other potential losses are eliminated.

As a final note, it has so far been my intent to assist a few of this groups readers with the information in this thread. The proposed technique is a blend of theory and practical application, and it works. I am by no means the only amateur using this technique, nor am I the only person pleased with the results.

73,

Jack WB3U

-Ten-Tec also sells a kit (at a slightly higher price).
-Anyone out there who has had experience with it?

No, unfortunately Ten Tec doesn't have a 220 radio. You are thinking about
the 1220 2M mobile kit. Latest rumor is that they should be available in 4-5
weeks, but since they have been telling me that since May, I will take it
with a large grain of salt. It is taking longer for them to design and write
the manual than they thought. If it is anything like the other Ten-Tec kits
that I have built, it should be a very good one. It should put the Ramsey
to shame.

CIS (the proper designator) is the Compuserve Information Service. Many
of its users (not so affectionately perhaps) refer to it as CI$ due to its
inflated charges compared to the other major on-line services.

This is almost but not quite true. There is one (and only one that I know
of, and I'm an active contester) that clogs all bands and modes at once,
namely Field Day at the end of June. While it is true that there is some
minor contest or other almost every weekend, there are only a handful (the
CQ Worldwide, CQ-prefix, ARRL DX, and ARRL sweepstakes, each having
separate CW and phone weekends) which predictably trash wide expanses of
HF spectrum. Also there is Field day as I mentioned above, which is all
modes and all bands (except the WARC bands) at once. BTW, one of those,
the CQ-prefix SSB contest, is happening this weekend (3/25/95).

This would explain my not knowing of the Icom battery rail problem. My Icom is the 2AT... :)

4121. FT-107 mods for Amtor/Pactor

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-26 11:55:09 UTC
From: mats.petersson@mailbox.swipnet.se
Message-ID: <3l3kmu$7r5@news2.swip.net>
Source record: 249933

Hello everybody with an FT-107M!

I have observed that the AGC on my FT-107M is a bit too slow for working AMTOR/PACTOR, even in its "fast" mode.
Anyone out there who has any tip on how to modify the FT-107 to get the AGC work a little faster? It works ok when I turn the AGC off, but it would certainly be nice to have it on, because as it is now, I am forced to ride the RF gain up and down as the signal of the other station varies. Any other suggestions of how to modify the rig to get a faster TX/RX switching is welcome as well. I have looked everywhere in BBS:es and Mailboxes for any kind of mods for the FT-107, with no success.
Any help appreciated!

Best Regards
Mats Petersson SM5SXL

4122. ICOM W21AT BP-130 and LC-105

Hi All,

I was wondering if anyone knew of a mail order house that would carry the ICOM W21AT battery pack BP-130 and the carrying case LC-105. I bought the ICOM HT on February 11 from Lentinis in Newington, CT and they had to backorder the BP-130. They gave me the wrong case (LC-103 which fits another model). It's now been 6 WEEKS and I haven't received either of them yet. I'd like to find someplace that has them IN STOCK so I can cancel my current order. I believe HRO has the BP-130, but noone seems to have the LC-105 in stock. Thanks in advance....

>at the ham swaps) and go for quite a lot more than $50. We've also
>been told that to change the frequency of a Micor amp involves more
>parts changing than it's worth.

There are 3 basic frequency ranges for the VHF Micor. One of them
covers the 2 meter band without modification. The other two require
some capacitor changes for best results. It's not a big deal. The
most common model covers the commercial frequencies just above
the 2 meter band. You can either replace the capacitors with the
larger exact replacements called out in the Motorola manual, or
you can just parallel padders across them. The parts are fairly
non-critical, cheap, and easy to change.

At most major hamfests, such as Dayton, there will be hundreds and
hundreds of Micors stacked up for sale. While a cherry unit may
command a price of $100, you can get one with a working PA for
$50 or less with a bit of shopping and haggling.

Micors are becoming a bit more rare than they used to be. They
are getting pretty old now. But there are still plenty of them
out there to be found.

LARCFEST - Hamfest and Computer Swap

Sponsored by the Longmont Amateur Radio Club

Saturday, April 1, 1995 8:00am - 3:00pm
Boulder County Fairgrounds at Hover and Nelson Rd. Longmont, CO

**********************************************************************
**********************************************************************

One of Colorado biggest and best hamfest and computer swaps is coming
April 1.

Raffle prizes include: Kantronics KPC-3 TNC
PC Multimedia Upgrade Kit
(a $500 value!)

With a GRAND PRIZE: KENWOOD TS-50S HF TRANSCEIVER

Admission is only $4.00 per adult with children under 12 FREE
With your admission you will see a large selection of amateur radio
equipment as well as great values on computer hard and software.

Want to become a Ham? (A licenced amateur radio operator)
VE Exam sessions will be given during the day. CALL 303-776-9158
for more information.

*** Commercial Exhibitors will be there! ***
*** Food and Lots of Coffee Available ***

CAMPSITES WITH CAMPER HOOKUPS ARE AVAILABLE FOR THOSE COMING
FROM OUT OF TOWN. CALL 303-676-1525 FOR DETAILS

VENDORS!: (A few) Tables are still left for $8.00 each
(Does not include admission)

Reservation can be made by sending a check to:

L.A.R.C.
P.O. Box 86
Longmont, CO 80502-0086

or call for more details:
```

John Stransky KF0RQ 303-776-2110
Randy Stevens N0NMO 303-499-1106

Talk-in frequency is 147.87/27 LARC repeater or use simplex
146.52.

My father has one. I can't recommend it. Some serious mistakes in the manual that would cause it not to work if you weren't sharp. His currently has a TX and RX noise problem. I don't doubt that there are others who have had better luck. The old standard "It ain't no Heathkit" applies here. Personally, I'd save up a bit more money and buy a commercial Amateur 220 rig, new or used. There is no PL, or speaker either.

....
>I had a true desire to get back into the hobby. I have been reading
>this newsgroup since about test day. By the time I received my
>license I had all but lost interest again. I have no desire to spend

It's sad that you're so easily swayed into disinterest by what you
read. Try to gain a stronger will and build your self-confidence.

These newsgroups are not ham radio. And I'd guess that less than
1% of the ham community is represented on rra. So don't be put
off by our opinionated comments.

I'm one of the more vocal pro-code pro-homebrew folks but my
intent is not to drive anyone off the air. If you disagree with
we say then jump in the brawl with your own opinion.

Most importantly, get on the air and have fun!

Ohio/Penn DX Bulletin No. 200

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 200
BID: $OPDX.200
March 27, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K4CEF & Southeastern Cluster Group, AD1C, WW1V, NT2X, W4MWT, KH6WU, W7WY, DF4RD, DL2GBT and DL7VEE & DXNL for the following DX information.

3D2, CONWAY REEF. The 3D2CU DXpedition which was to begin on March 24th, has run into some unexpected problems. Garry, NI6T, operating as 3D2CU/mm has reported that the team has arrived at the island but, due to rough seas, they have been unable to transport all the equipment and team members ashore. They lost some equipment when one of the rubber rafts overturned. They are currently waiting for the seas to calm to finish unloading. As this was being written, no activity has been reported. The DXpedition team was hoping to participate in the WPX contest and to be active until April 3rd (as reported by their last press release).

5T, MAURITANIA. I2RLX, IT9AZS, IT9JNT and IT9PHY are planning a DXpedition with the call 5T0AS, from April 1-20th. They will be active on all bands CW/SSB. If possible they will activate IOTA-island AF-050 (Ile Tidra in the Nouadhibou/Akjoujt Province Group) as 5T0AS/p. QSL via IT9AZS.

8Q, MALDIVE ISLANDS. Juergen, DL1IAI, will be on Kuredu Island, from April 12-27th. He has requested the callsign 8Q7AI, but has not yet received the paperwork. He plans to operate on 80-10 meters and if possible 160 meters. QSL via CBA.

IOTA DXPEDITION (Cousin's Island, NA-137). On Saturday, April 1st, Robert, WW1V, and Jeff, KA1GJ, will activate this Maine State West Group for a couple of hours from 1500-1700z. They will be on or around 14260 kHz operating with TS-50 and a R-5 antenna. If operation goes well, the team will plan another operation from the island with a kilowatt and reasonable antennas during the IOTA contest in July.

J8, ST. VINCENT & DEP. Just a reminder that members of the "Hamburger DX Club" (HDC), Mark/DL1XAQ and Ralf/DL9XAT will start their Caribbean trip from St. Vincent (now through April 1st). Next stops will be St. Lucia (J6) April 1st-4th and Guadeloupe (FG) April 4th-7th. QSL via CBA or via the bureau.

JW, SVALBARD. The DX New Letter reports that DF6JC will be active as JW/DF6JC from the station of JW5E from March 24-30th.

EX (ex UM8), KYRGHYZSTAN. Yuri, EX0A, Executive Director of Amateur Radio Union of Kyrgyzstan, has provide OPDX with the following information about amateur radio operators in his country: All radio amateurs in his country use the prefix - EX. Prefix structure is as follows:
EX9 - Club stations
EX0,2,5,6,7,8 - All individual callsigns
EX1,3,4 - Special callsigns
EX/homecall - For foreign operators callsign only
Presently, there are only 4 foreign stations that have a LEGAL LICENCE: EX/DF8WS (QSL via DF8WS), EX/DK7ZT (QSL via DK7ZT), EX/N0LAZ (QSL via DL4MFM) and EX/KD6BKL (QSL via DF8WS). The following are operating without a licence: N6AMC/UM8, EX/RZ4FZT, EX/UA4FAO, EX/UA4FAY and EX/DL1BCL. Yuri states, PLEASE do not send QSLs for stations with UM, RM and EX prefix to the Russia QSL-bureau in Moscow. We have not received any QSLs from the Russian QSL-bureau for about 3 years. And also note: ARRL, JARL and many others QSL-bureaus send all cards for us to Moscow, very sorry but our HAMs will not receive these QSLs. Our radio amateur organization's national QSL bureau (for UM,RM and EX) is:
P.O.Box 1100
Bishkek -20
720020
Kyrghyzstan, CIS

NEW QSL MANAGER. As OPDX reported last week, Ken, V73C, was looking for a new manager and within the last week he has recruited Bruce, N4GAK. Send all V73C cards to: Bruce Smith, 15 Henderson Dr., Fayetteville, TN 37334.

P5, NORTH KOREA. A station signing P5BK has been reported active over the past week from a European PacketCluster and W6-land stations. The station's activity has been on 15/20 meters CW between 2230 and 0000z, plus stating to QSL via JA1BK. ONLY one thing to say, "WFWL".

POSSIBLE FJL RADIO SHUTDOWN. Ed, NT2X, reports he had a conversation with Slava, RX1OX/FJL, operating from Franz Joseph Land, and was told that a possible shutdown of the polar base may happen due to budget constraints. It can happen within the next several months, and if it does, then all personnel will be removed to the mainland. This would mean that FJL will no longer be represented on the air. Currently active from FJL are R1FJL (ex-4K2MAL and last heard on March 24th, on 14014 kHz at 2253z) and RX1OX/FJL (last heard on March 4th, on 14237 kHz at 0123z).

QSL INFO. DL5UF, DK1CE and DF5WA who were active from Madagascar (5R) from February 25th through March 10th, provide the following QSL routes.

QSL via bureau or direct 5R8EH via DL5UF, 5R8EI via DL2GBT and 5R8EJ via DF5WA.

V3, BELIZE. Don, ZF2VW (ex-DJ0IR), will be active as V31VW in San Ignacio, from April 10-24th. Don will be on 12 and 17 meters, CW and SSB for anyone that needs Belize. Also look for him on 21370, 14230 kHz and he will try 10 meters (28410 kHz), if the band opens up. QSL to: Vancouver Mountain Radio Club, P.O. Box 1622, Vancouver, WA 98668.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

|>>
|>
|>Hi Todd:
|>
|>First, let's be certain we are using the same definition for
|>"RF in the shack". For purposes of this discussion, my meaning
|>has been "the undesired presence of RF on equipment chassis
|>including tuner, rig, microphone, keyer etc." Helping these
|>operators rid their equipment of this phenomenon was my goal in
|>posting all preceding information. Although related, the
|>presence of RF as one might measure it with a field strength
|>meter was not complained of, and was not discussed.

I think most people would define "RF in the shack" as unwanted radiation
occuring in feedlines that results in an inordinate amount of RF energy
in the shack.

|>In any event, your contention that feedline radiation occurs
|>just as easily with a 1:1 VSWR as a 10:1 VSWR is untrue. If a

Please dismiss my contention with some evidence. High VSWR occurs as
a result of impedance mismatch between the antenna system and the
transceiver (or amplifier/tuner if either or both is used.) "RF in the
shack" normally occurs as a result of feedline radiation occuring
inside the shack. The two are related but neither is causal of the other.
They can occur together or separately or alone. High VSWR by itself does
not cause "RF in the shack" and "RF in the shack" can occur with a VSWR
of 1:1.

: I picked up a Motorola HT200 radio at a hamfest with a charger for a
: steal ($5) thinking I could maybe put mu local PD or Ambulance freq in it

Thats about the right price for a HT200 -- the radio is probaly older than you are :)

Before you get too far you might want to check the battery condition
Typically those are the most costly part of that vintage radio to replace

If the crystal has the correct carrier freq marked than someone has already
retuned the radio for the lower part of the band.
This may or maynot have required any mods to the radio.

My advise would be that if you cannot use the radio in its present
condition than dump it at the next hamfes to the radio.

Crystals,PL,manuals and a battery would cost more than what you
want to spend on a radio that old (unless your starting a Moto musuem :))

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 26/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 26 MARCH AND FORECAST FOR 27 MARCH - 29 MARCH

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 90/34

GOES satellite data for 25 Mar
Daily Proton Fluence >1 MeV: 4.0E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 8.7E+06 (normal)
X-ray background: B1.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
27 Mar 28 Mar 29 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 27 Mar: 93/38

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 25 Mar
Learmonth 20 2333 4444
Fredericksburg 23 6
Planetary 25 6

Observed Kp for 25 Mar: 1322 2111
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
27 Mar 25 Unsettled to active, with possible isolated minor
storm periods.
28 Mar 25 Unsettled to active, with possible isolated minor
storm periods.
29 Mar 25 Unsettled to active
COMMENT: IPS Geomagnetic Disturbance Warning 95/08 was issued on 24
March and is current for interval 26 - 31 March.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
26 Mar normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Mar normal-fair fair poor-fair
28 Mar normal normal-fair poor-fair
29 Mar normal normal-fair poor-fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
26 Mar 36 15 to 30% above predicted monthly values until 20UT,
15 to 30 % depressed thereafter.

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
27 Mar 0 15 to 20% below predicted monthly values
28 Mar -10 15 to 20% below predicted monthly values
29 Mar -10 15 to 20% below predicted monthly values
COMMENT: Observed Townsville and Hobart frequencies: near predicted
monthly values.IPS HF Radio Communications Warning 95/12 will be
issued later today for interval 27-30 March.

Thanks to all who responded.

Which dictionaries contain the word "prosign"? I'd be a bit
reluctant to use a word that most people couldn't find in their
desk dictionaries.

Cross-posted to: rec.radio.amateur.misc,in.ham-radio,rec.radio.shortwave

The Indiana University ARC will operate K9IU throughout the month of
April to commemorate the 175th anniversary of Indiana
University. Operation will be on the 80 to 10 meter amateur radio
bands and the 2 meter amateur band. For certificate and QSL, send QSL and a
9x12 inch SASE to:

K9IU
Indiana University ARC
Indiana Memorial Union, Room 21
Bloomington, IN 47405

We will also be manning a special event on April 1, 1995 from 11am to
7pm. The frequencies we will be monitoring are:

Band CW Phone
---
80 meter 3.680 Mhz 3.880 Mhz
40 meter 7.130 Mhz 7.270 Mhz
20 meter 14.040 Mhz 14.270 Mhz
15 meter 21.130 Mhz 21.365 Mhz
10 meter 28.130 Mhz 28.470 Mhz
2 meter 146.520 Mhz (simplex)

A prize will be sent to every 100th contact made on April 1st.

Also contact via our repeater at 146.940- Mhz

4141. Call sign re-allocation

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-27 00:40:38 UTC
From: hidaka@lsi.melco.co.jp
Message-ID: <1995Mar27.004038.6579@xfsv.lsi.melco.co.jp>
Source record: 249954

Dear all;

The March/'95 issue of QST let me notice that the FCC will re-allocate call signs
(vanished ones) beginning in this coming April.

I've never heard of this plan because I live in Japan now.
Please let me know ANY recent informations regarding this action,
especially how/when to get the FCC format for this application.

Actually I have a 2x1 call sign (NT1K) which I'd like to change to
a good old 1x2 call sign like W1** or K1** withiout K at the tail
for convenient CW operations.
Do I have any chance?

Thanks in advance.
March 27, 1995

For sale:

100Mhz Tektronix dual trace Oscilloscope Only $800.00
Model: 2235 Military grade
Both A and B channels plus TV trigger input
Includes: all probes/manuals that shipped with it.
In great shape and works perfectly!!

Also has service manual, users manual, discrete viewing hood, carry ase.
Asking just $800.00 (purchase price was near $3,000.00)

Email me or give me a call at 312-507-8026 (day) if I'm not in, just
leave a message and I'll call you back.
Pete

I have an HTX-202 and I Do plug it into the cigaette plug. Have for
months. It only give 12 volts. The radio IS designed for that. As far
as 25 or 10 watts, YEAH RIGHT. Check the specs again.

Hi again Mark,
`Prosign' is a modern-day conjunction of `professional-signal'.
My references actually read ``The signal ...---... was adopted...''
so that might be the most accurate entry for your FAQ. Sorry for any
confusion.

Jeff NH6IL

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

For your interest ...
=================
1. Australia is the world's heaviest per capita user of
Internet, the international computer network.
2. Australia has the second highest number of personal
computers per capita in the world, after the United States.
3. Australia has the second highest level of computing power
per capita in the world, after the United States.
4. Australia is the eighth largest user of personal
computers worldwide.
5. Australia's information technology market is worth more
than 10 billion dollars Australian per year, second only to
Japan in the Asia-Pacific region.
6. Australia's information technology industry is bigger
than Korea's and nine times the size of Singapore's and Hong
Kong's.
7. Australia's business employs more than 2.7 million
personal computers - 48 per cent are on local area networks.
8. Australia's information technology companies export almost
2.5 billion dollars Australian of products a year.

IPS WEEKLY REPORT
---
17 MARCH - 23 MARCH

DATE OF ISSUE: 24 MARCH 1995

INDICES:

DATE 17 18 19 20 21 22 23
10CM 83 92 84 89 90 94 94
A 8 4 3 4 1 3 (7 ESTIMATED)
T 38 27 37 34 30 32 39

SOLAR ACTIVITY WAS VERY LOW 17TH TO 21ST, AND 23RD MARCH; AND MODERATE ON 22ND WITH AN M2 FLARE.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET TO UNSETTLED 17TH AND 23RD MARCH, AND QUIET FOR THE REMAINDER OF THE PERIOD.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE ENHANCED BY 10 TO 20 PER CENT ON 17TH, THEN NEAR NORMAL UNTIL 23RD WHEN FREQUENCIES WERE NEAR NORMAL TO SLIGHTLY ENHANCED.

FORECAST (24 MARCH - 30 MARCH)

SOLAR: VERY LOW TO LOW.

GEOMAGNETIC: ACTIVE TO MINOR STORM PERIODS 26 TO 30 MARCH, QUIET TO UNSETTLED THEREAFTER.

IONOSPHERIC: MOSTLY NEAR NORMAL, 15 PER CENT DEPRESSED EXPECTED ON 29 TO 30 MARCH.

DX BULLETIN 12 ARLD012
FROM ARRL HEADQUARTERS
NEWINGTON CT MARCH 16, 1995
TO ALL RADIO AMATEURS

ARLD012 DX NEWS

THIS WEEK'S BULLETIN WAS MADE POSSIBLE WITH INFORMATION PROVIDED BY TEDD, KB8NW, THE OPDX BULLETIN, ANTOINE, F6FNU, THE YANKEE CLIPPER CONTEST CLUB PACKETCLUSTER NETWORK AND THE CONTEST CORRAL COLUMN FROM THE PAGES OF QST MAGAZINE. THANKS TO ALL.

TUNISIA. 3V8BB HAS SUBMITTED PROPER DOCUMENTATION. CARDS WILL NOW BE ACCEPTED FOR DXCC CREDIT.

ZAIRE. PETER, ON6TT, CONTINUES TO BE ACTIVE AS 9Q5TT. HE WAS RECENTLY OPERATING RTTY ON 20 METERS STARTING AT AROUND 2030Z.

BAHRAIN. THE DX NEWS LETTER (DXNL) REPORTS THAT ADMIRAL SCOTTY REDD OF THE US NAVY, KA SIGNING A92Q. LISTEN FOR HIS 40 METER CW. QSL VIA BOX 116, MANAMA, BAHRAIN.

MALTA. BIRGIT, DL7VTZ, AND HOLGER, DL7VTM, WILL BE ON GOZO ISLAND FROM MARCH 24 TO APRIL 7 SIGNING 9H1TZ AND 9H1TY, RESPECTIVELY. YOU MAY REMEMBER THEIR RECENT DXP AS TN2M ES TN4U FROM THE CONGO. PLANS ARE TO PARTICIPATE IN THE CQWW WPX CONTEST ON THE 25TH AND 26TH. ACTIVITY WILL BE ON ALL BANDS WITH 100 WATTS AND WIRE ANTENNAS. QSL VIA DL7VRO.

BOUVET ISLAND. UA9OBA WILL BE DOING SOME EXTENSIVE TRAVELING THROUGHOUT THE ANTARCTIC AND ARCTIC REGIONS BEGINNING IN JUNE. ALONG THE WAY HE PLANS TO ACTIVATE A FEW NEW IOTAS, NAMELY NANSKIAN AND SCOTT ISLANDS. AT THE END OF THIS LONG TRIP SOMETIME IN LATE OCTOBER OR NOVEMBER HE HOPES TO OPERATE FROM BOUVET, AN-002.

SRI LANKA. WILLEM, ON6TZ, AND GERARD, ON4ASQ, WILL BE ACTIVE UNTIL APRIL 1.

ISRAEL. RIKI, 4X IS ACTIVE ON 160 METERS 20 MINUTES BEFORE AND AFTER HIS SUNSET. HE CAN USUALLY BE FOUND ON OR NEAR 1830 KHZ LISTENING UP. HE NEEDS ID, ND, NV, OR AND UT TO COMPLETE HIS WAS.

CONGO. YL OP HAZEL WAS HEARD LAST WEEKEND SIGNING TN7OT ON 14220 KHZ AROUND 1945Z.

KUWAIT. FAISAL, 9K2HA, REPORTS THAT AS OF MARCH 1, ALL FOREIGN AMATEURS VISITING KUWAIT MUST SIGN 9K2/THEIR HOME CALLS. PLEASE BE AWARE THAT SOME CALLS ONCE ISSUED TO FOREIGNERS ARE NOW ASSIGNED TO KUWAITI NATIONALS. FOR EXAMPLE, 9K2ZZ NOW BELONGS TO FAISAL, EX-9K2HA. QSL VIA ON6BY. AS OF MARCH 1, 9K2ZZ IS 9K2/N6BFM, 9K2ZC IS 9K2/KI0K, AND 9K2YY IS 9K2/N0YKI.

PACIFIC DXPEDITION. TOSY, JA6VZB, WAS ACTIVE FROM BELAU AS KC6VW UNTIL MARCH 17, AND FROM MICRONESIA AS V63BM MARCH 17, 18 AND 19, AND GUAM AS AH0T/KH2 MARCH 19 AND POSSIBLY LONGER. HE WILL WORK ALL BANDS USING CW, SSB AND RTTY, BUT CONCENTRATE ON 160 METERS AND RTTY. ONLY QSL VIA THE BUREAU TO JA6BSM.

EUROPA. FR5HG SHOULD BE ACTIVE THROUGH APRIL 30 WITH CW, RTTY AND SSB. HE RUNS 500 WATTS TO A LOG PERIODIC ANTENNA. QSL VIA F6FNU.

ASCENSION ISLAND. G4RWD IS ON THE AIR AS ZD8WD UNTIL SEPTEMBER.

CARIBBEAN DXPEDITION. MARK, DL1XAQ, AND RALF, DL9XAT, WILL BE ON FROM FOUR DIFFERENT IOTAS IN THE CARIBBEAN. HERE IS THEIR SCHEDULE. FROM MARCH 25 TO 26, THE SAINT VINCENT AREA, J8, NA-109. MARCH 27 TO APRIL 1 FROM NA-025. APRIL 1 TO 4 FROM SAINT LUCIA AREA, J6, NA-108. APRIL 4 TO 8 FROM THE GUADELOUPE AREA, FG, NA-102. ACTIVITY WILL BE ON 80 THROUGH 10 METERS. QSL VIA THEIR HOME CALL SIGNS.

SAINT LUCIA. PETER, DK1RP, WILL BE ON THE AIR AS J6/DK1RP FROM APRIL 11 TO 29. HE WILL OPERATE PRIMARILY CW ON THE WARC BANDS. QSL VIA THE BUREAU.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the Pres'nt (Col) VK2CTD @ VK2XSB, or the Secretary (Pat) VK2JPA @ VK2AAB.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA @ VK2AAB. Email address for the Broadcast Officer is :

patl@pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking for-ward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

That concludes ANARTS News Bulletin 851 26/03/95.

4147. Origin of PCM?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-27 01:35:23 UTC
From: am856@yfn.ysu.edu
Message-ID: <3l54or$doq@news.ysu.edu>
Source record: 249955

I don't know why I didn't think of asking here sooner.

I am having a very interesting exchange in alt.video.laserdisc
about Pulse Code Modulation.

I recall its origin as a broadcast improvement over FM. The way it
was arrived at was overdrive the FM output amplifier so that it
would be heavily clipped in essence transforming the originally
frequency modlulated carrier into a variable width pulse modulated
carrier (PCM).

I was later taught in college digital electronic that PCM was a neat
wave to encode binary bit streams. I also recall learning that no matter
how the original PCM carrier was derrived (i.e. FM carrier clipping or
binary bit stream) the neat thing about PCM was that you always had the
option of either processing it in the digital or analog domain.

What I am interested in is that FM clipping is a form of flash
digitization.

I seek the wisdom of the gurus here to clarify to my thoughts and eliminate
any of my misconceptions.

I thank you in advance for your responses.

WOW !!!

What a cool thing to do !!

I'll bet you've bypassed the interlock on your microwave so you
can get your food out while it's nice and hot.

Hey, why not ground YOUR station on the neutral wire and your
counterpise can be nationwide. Seeing your a (Sr.) when you
go can I have your gear, if it's still intact !!!!!

Thess are my views and not those of my employer.....

> societies to make this happen.

Is this a typo? A full 3 Mhz of band for 40 metres? You'd need a log periodic
just to cover the 40m band! Can anyone at IARU confirm this IARU goal?

4150. 2m RF problems with the Neon?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-27 02:19:56 UTC
From: slm@world.std.com
Message-ID: <D62uH8.ErD@world.std.com>
Source record: 249961

Greetings! My husband Lee KA1USL is thinking about purchasing a Chrysler Neon, and would like to ask if anyone has any experience with running a 2-meter rig in a Neon. He heard from one guy who rented one once that running 5 watts was causing electrical problems.

He likes to use 2 meters while driving; if there are RF problems in the Neon, he may want to consider another kind of car.

Input from other Neon drivers would be most welcome!

73,

Sharon KC1YR

I just purchased a used '93 Toyota Camry XLE this past weekend. Would like to hear from folks who have installed 2M or Dual Band radios in these vehicles. Questions:

1. Where did you mount your radio? I have the CD Player, so indash is kinda out of the question.

2. Did you find any RF problems. My Camry has a security alarm, so I'd be especially interested in this aspect.

3. What type(s) of antennas are you using and how do they perform. (No "drill the hole" available with the Sunroof)

4. Any other notes or suggestions would be greatly helpful.

Thanks and 73's! - Dave

>Most of what you have heard is correct. One minute of solid copy is an
>automatic pass. So at 5 WPM, 25 correct characters in a row is a pass.
>The other way to pass is to answer 7 or more of a 10 question test. Some

My experience is slightly different. For my 5wpm there was no option for questions.
Had to get 25 straight correct. Took my 13wpm twice. First time was fill in the
blank, 2nd time was multiple choice...& was luck enough to get 10 of 10.

It was great to pass, and for me not easy. That is i worked/practiced pretty hard
at it. For those with a more natural ear for cw, god bless em. Now where's that
advanced study pool...:)

And if you want the registered version which has some very slick features,
as well as the author's huge library of various detail maps, projections, etc.
you can get everyt hing from the author's LL BBS, which is
(703) 241 7980.

You register once and then you're entitled to all the subsequent upgrades.
I've gotten everything from 4.2 onward, and he also has ham versions of the
geoclock program, centered on your QTH with callsign databases,
computed distances,bearings, grayline, terminator, etc. in realtime.

Have fun!

4155. $*$*$ 30 Weak Signal Challenge (HAM Post) - Now $40 $*$*$

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-27 03:55:43 UTC
From: ir000411@interramp.com
Message-ID: <3l5cvv$gkj@usenet.interramp.com>
Source record: 249965
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.space,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amateur.antenna

$*$*$ 30 Weak Signal Challenge (HAM Post) - Now $40 $*$*$

Five weeks have passed since the original posting of this challenge.
During that period, the Web page was accessed over 1000 times.
The weak signal recording has been listen to and processed by
many. Several operators using their best audio filters have been
able to copy my call. And yet, a correct identification of the calling
station has not been made. I am increasing the amount offered to $40
and will continue to escalate the prize until someone cracks the problem.

Details on the challenge can be obtained from my Web page:

http://www.webcom.com/~af9y/

If you do not have a Web Browser, you can ftp the following:

FTP ADR: ftp.webcom.com/pub/af9y/www/

Sound File: unkn422.zip This is the Zipped Wav File

Ref Files: af9ypage.zip GIFs of AF9Y Web Page (with challenge info)
fftdsp38.zip FFTDSP Demo Program
fft422.zip View of unkn422 in next release

The winner will be announce in the UseNet groups carrying this post
and my Web page.

Final Note for those trying their own signal processing techniques:

Many have asked about the WAV file format used for the
A/D recording. The format is a PC Windows standard which
contains 43, 8 bit-bytes of header (which can be thrown away)
followed by a consecutive series of 8 bit A/D data. The sample
rate was 8192 samples/sec.

Good Luck,
de Mike Cook - AF9Y

Take a look at some of the Technical Information Pages at the ADRS WWW site:

http://www.iea.com/~adrs

and at the TAPR WWW site: http://www.tapr.org/tapr

A lot of information is out there! Good Luck!

>must meet this particular section of the rules.

Well, yes and no. If your receiver (or other electronic device) causes harmful interference the FCC can order you to shut it down, *whether it is in Part 15 compliance or not.* This provision applies equally to a new radio operated in "showroom stock" condition, one that has been modified or one that is so old that Part 15 compliance was not required in its category when it was made.

My impression is that if you have a receiver that was Part 15 compliant, and you modify it in such a way that it no longer is,AND it then causes harmful interference, the FCC would come down on you because the interference was your own fault (as opposed to interference caused by a defective or old device). If your receiver doesn't bother anybody else's reception, the FCC has far better things to do than bust you on such a technicality -- and no one else has the authority to do so.

The problem I've usually had with purchasing Lexan or Acrylic is that is
only comes in 1/8" sheets or thicker, and most hobby boxes or PacTec cases
have grooves for bezels 1/16" or thinner. My solution is to cut a piece
of material from 1/8" stock, then use a table saw to thin the material to
1/16" in the area that fits into the bezel. End on view:

I kind of am in the same boat, but with a different car. I've got
a '93 Saturn SL1, and have NO place in it (that I can find) to put a
radio. More than anything else, that's why I haven't gone out and purchased
a monile rig for my car. For about 6 montns, I've had and old Sears CB radio
in the car, but it's just lying up against the gear shift housing, and I don't
want to do that with any Ham Radio. Mainly because I don't want to take the
CB out to make room for it.

As far as antennas are concerned, I was planning(if I ever get a radio
in the car) to just get a trunk or hood-mount 5/8 whip. Two local hams I know
have standard Larson 5/8 2m whips pop rivited to the sheet metal on
the trunk (rear quarter panel) and hood (front fender)

No doubt. I would imagine they said, "... a full 300 KHz of band...,"
and Steve added another zero. 300KHz would allow many countries to
operate phone above 7.100, just like U.S. hams do now.

Dave, do youhave a call sign? If not, why are you crabbing abt what others do. I don't care if some stamp collectors only collect stamps of Kenya, or some photographers haul around big 8X10 cameras when they can get pics with 35mm. That 8X10 film sure wastes a lot of silver. And motorboats make more noise than sailboats. How about listeing your other interests and then the rest of us can talk about how boring and senseless we think they are.

Just in case you don't attend Dayton, or some other major hamfest, and you want to repair your PA deck, try R.F. Parts in San Marcos, Ca.

They advertise in most of the ham publications, or their phone number for ordering is 1-800-RFPARTS

Good Luck,

Rick, WB7UGZ

>in the shack.

This definition does not describe the symptoms under discussion. The persons
who asked for help do not agree with you. Haven't you read the earlier posts?

>Please dismiss my contention with some evidence.

The symptoms which were described are familiar to experienced operators.
I have explained why they occur, but if you believe an alternate explanation
is appropriate, please present it.

>High VSWR occurs as a result of impedance mismatch between the antenna
>system and the transceiver (or amplifier/tuner if either or both is used.)

This is one of the most pervasive misconceptions in the amateur community.
VSWR results from attaching a reactive load to the feedline. The match
between transmitter and antenna system determines power transfer, not VSWR.

>"RF in the shack" normally occurs as a result of feedline radiation
>occuring inside the shack. The two are related but neither is causal
>of the other. They can occur together or separately or alone.

Didn't you say in your opening statement that they're the same thing?
You're contradicting your own argument.

>High VSWR by itself does *not* cause "RF in the shack"

Maybe not in every situation, but the subject of this thread is high VSWR
that *does* cause RF in the shack.

>and "RF in the shack" can occur with a VSWR of 1:1.

I can think of only a few conditions that cause this, and again, all are
unrelated to this thread.

It is evident that you have missed both the purpose and relevance of these
posts. If the originals are no longer on your server, let me know and
I will copy you on them via e-mail.

Yes, this is exactly what I meant. I find no statement in the rules to the effect that a modification would be illegal, even if same causes non-compliance with Part 15. The operator does remain responsible, however, in the event of harmful interference (as such interference is described under all applicable rules, not just Part 15).

I wouldn't get discouraged about others looking down at you for having
a tech no-code.

I'm a tech no-code and have been for about a year. I think it was a
good idea for those of us that are very busy, but still want to get
into ham radio. Both of my parents have been hams since the 70's they've
gotten out of it, but I wanted to try it.

I was (am) in college, so I didn't have much time to study for the code.
Although I fully intend in the future to upgrade, my college comes first. I
think that it has fullfilled the original purpose of letting me get my
feet wet and want to upgrade.

I haven't had much problems with people snubbing they're nose at me when
I tell them that I'm a no-code. Although some people do like it, I've never
been ignored on the radio.

Go ahead an try 2m. Nobody will ever know that your no-code unless you
tell them.

I had the same problem with my Mazda 323F.

Martin Lynch does a boot clip (perhaps that should be trunk clip in this newsgroup) combined with a dual band 2m (1/4 wave) and 70cm (5/8 wave) antenna. It looks like a mobile phone antenna, so it doesn't attract too much attention. I've fitted one on the hatchback of the car and it works very well.

He also does a miniature magmount with a combined 2/70 antenna.

The other possibility is an on-glass antenna, but I've heard some bad reports about those, and they get a bit cumbersome on 2 as due to the capacity of the through-glass connection, they are longer than a conventional quarterwave.

Martin's number is 0181-566 1120. Ask for Graeme Platts, and tell him you want the same as he sold Mike, G4KFK!

Try Ham Radio Outlets at 224 North Broadway, Salem, NH on 603 898 3750.
Follow the 495 North out of Marlborough for about 30m, then North on the
93 and it's the first exit after the state line, about 5 miles East of the
motorway.

If you're in the East side of MA, try Lentini Communications in Newington CT.
West along the Mass Pike as far as Springfield (watch out for Bart Simpson),
then south on the 91. If you contact the ARRL they have a detailed map they
send to visitors to ARRL HQ, also in Newington.

>the 2m/6m all-mode keypad mod. The "CD" model is also an all-mode HF
>transceiver.

Oh, then you haven't heard of the HTX-202E yet? The E is for European
and isn't available here yet. It is a wideband scanner via a keypad
mod :-) Hey Tom, did you try that AC mod I mentioned yet? How'd it go?
:-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-)

The following is a QST

The FCC gives hams a new band but a commercial newsletter
publisher says that on-air bulletins should be stopped on the HF
Bands. Find out who and why on Newsline report number 919 coming
your way right now!

(*****
NEW HAM BAND

Ham radio has a new band from 219 to 220 MHz but not every ham
will be able to use it. This is because the government says that
hams must coordinate their operations through the recognized
national society before going on the air. It's a first for modern
amateur radio and here are the details.
When the new rules take effect, on a date that has not yet
been announced, Technician and higher class amateur licensees will
be permitted to use digital modes of up to 100 KHz bandwidth at
more than 50 watts Peak Envelope Power output. This is because
the primary occupant of the band is the Automated Maritime
Telecommunications Systems or AMTS. And, to protect AMTS from
interference by ham radio operations, the ARRL, the American
Radio Relay League, has been designated as the singular national
contact point for all amateur operations in the 219 to 220 MHz

Amateur Radio allocation.
The League will be responsible for maintaining a database of all amateur operations in the band. All hams planning to operate in the new band must notify the ARRL at least 30 days prior to initiation of operations.
Even after registering with the ARRL, there are more restrictions on who can use 219 to 220 MHz. Amateur stations within 50 miles of an AMTS coast station must obtain the written approval of the AMTS licensee prior to operating. Amateur stations within 398 miles of an AMTS coast station must notify the AMTS licensee in writing at least 30 days prior to initiation of operations.
The ARRL says that it will assist amateurs in fulfilling these requirements but the FCC warns that Amateur stations operating in the 219 to 220 MHz band are not permitted to interfere with, nor are they protected from interference by, primary service operations in and adjacent to the new band.
The FCC Report and Order on this action is ET Docket Number 93-40. It allocates the 219 to 220 MHz band on a secondary basis to the Amateur Service specifically for point to point fixed digital message forwarding systems, and is the climax of almost six years of effort by the ARRL. This, to obtain at least partial compensation for the loss of the 220 to 222 MHz band.
The Report and Order also sets a legal precedent for the commission and its relationship with the private sector. As far as we know, it is the first time that the FCC has selected one representative of a group of radio hobbyists to perform what amounts to regulatory duty over the day to day operations of all ham radio operators on an Amateur band.

(*****
W5YI VS. HIGH FREQUENCY BULLETINS

A well known ham radio bulletin publisher wants ham radio bulletins banned from the high frequency ham bands. Fred Maia, the editor and publisher of the W5YI Report says that some amateurs are abusing the bulletin privilege and he wants it to stop.

If W5YI newsletter publisher Fred Maia has his way, one-way transmissions on the amateur HF bands will be a thing of the past.

"I think things have gotten out of hand." Fred Maia, W5YI

Maia filed a petition for rulemaking with the FCC March 16th. He's asking the Commission to BAN one-way information bulletins and Morse Code practice on frequencies below 30 MHz. Such transmissions, Maia sez, have outlived their usefulness and have led to abuse.

"Bulletin stations are going on top of 2-way communications that's angering a lot of the amateur community. I just thought

enough was enough. In the day and age there is plenty of other ways for bulletins and code practice to be done." W5YI

Maia sez the interference problems set a bad example for newcomers to the HF bands as well as to people monitoring worldwide. He sez only the U.S. allows what he calls one way broadcasting. Under Maia's proposal, Space Shuttle transmissions, International Amateur Radio Network broadcasts, and the ARRL's W1AW code sessions would be illegal on HF. Maia already has opposition.

"The phrase throwing the baby out comes to mind immediately." David Sumner, K1ZZ

David Sumner, K1ZZ is the League's Executive Vice President. He sez an outright ban would be detrimental to amateurs' ability to convey information on the HF bands.

"I don't see the problems associated, for example, with totally non-controversial matter. When the Commission looked at it 5 years ago, as far as I know it is still totally non-controversial and why he's making an issue of it." K1ZZ

Whether this will become an issue before the FCC remains to be decided. In 1989, the Commission looked into usage of the 20 meter band and found no need to make changes. The question now is whether it's time to revisit the rules.

Fred Maia stresses that his petition is written for the HF bands only. This means code practice and information bulletins airing on VHF and UHF repeaters would NOT be affected. Maia says the comments hams send to the FCC in response to his request could play a major role in deciding whether one-way transmissions continue to be legal or are outlawed.

(*****
GEORGE WILSON UPDATE

Some good news to report on the recovery of ARRL President George S. Wilson, W4OYI. Word that George is showing significant improvement following a stroke he suffered on February 11th. If he keeps up the current level of recovery, he may soon be moved to a rehab center closer to his home.
As we have said before, get well wishes for George Wilson, W4OYI should be sent in care of ARRL Headquarters, 225 Main Street, Newington Connecticut, 06111. Or you can post them to the "Get Well George" topic on the ham radio bulletin board on America Online.

(*****
DAYTON WINNERS

Last week we told you that Rosalie White, WA1STO had been named as Dayton's Radio Amateur of the Year. The Radio Amateur of the Year is one of three awards given each year by the Dayton Amateur Radio Association. The two others are the Specific Achievement and Technical Achievement and this year these awards go to a pair of very deserving hams.

The 1995 recipient of the Special Achievement Award is Ed Brenner, WA3TVG. Best known as one of the flying dentists, WA3TVG has been active annually as a dentist, but also as an amateur.

"I grabbed the opportunity and I went to San Padro Sulu in 1979 and in 1980 with these guys. 1979 I requested and was granted a reciprocal license so that I took my little Atlas and set it up at the hotel. There were 13 dentists along at the time and I ran phone patches back home for each and everyone of them." Ed Brenner, WA3TVG.

Ed is editor of MARCO, the Medical Amateur Radio Council Newsletter, has kept the MARCO members informed and motivated to continue their humanitarian activities.

Phillip Ferrell, K7PF, an amateur for 44 years has garnered the 1995 Technical Excellence Award. K7PF retired from Boeing and developed a technique in which transmitters can be fingerprinted. Phillip explains that this technicque was born out of necessity.

"We had a local, genuine gun carrying amateur extra psychopath here in the area back in the 70's. An he had a little cadre of malcontent that he put together and basically jammed the major wide area repeaters in our area here just into submission." K7PF

The K7PF technique identified the turn on transient that is unique to each transmitter. This technique of identifying transmitter fingerprints has greatly enhanced the ability of amateurs and the FCC to locate problem transmitters.

Hamvention awards will be presented at the Grand Banquet to be held at the Dayton Convention Center located in downtown Dayton, Ohio on Saturday evening April the 29th.

(*****
HAM RADIO AND MORE ANNIVERSARY

"Ham Radio and More", the nationally syndicated radio program about Amateur Radio celebrates it's 4th anniversary on Sunday April 23rd. The show's creator and host, Len Winkler, KB7LPW says that he wants to thank each and every listener who has helped to make the program a success. Winkler says that it is the listeners interest in the show and their continued efforts in getting stations to air "Ham Radio and More" that has brought the success. Without their support says KB7LPW, "Ham Radio & More" could not exist.
For more information on the show, or to find out how to get

the show aired in your community, write Ham Radio and More, 4800 North Central, Phoenix, Arizona 85012. Mark the envelope attention Len Winkler, KB7LPW.
By the way, Len tells Newsline that he has just hit 32 stations now carrying the program. He also plans to originate live from Dayton on Hamvention weekend. More on this, next week.

(*****
DAYTON VHF/UHF DINNER

In other Hamvention related news, WA8QNR reports via packet that reservations are being accepted for the 1995 VHF Dinner to be held on Friday night, April 28th, during the Dayton Hamvention weekend. This dinner is aimed at Weak Signal VHF/UHF Operators and as usual will be held at the Barnsider Restaurant near the Hara Arena. The number of seats are limited, so please reserve a spot please by contacting Bryan Snyder, WA8MZQ, 4415 Holiday Lane, Bellefontaine, Ohio 43311.

(*****
NEW SPANISH RADIO CLUB IN CHICAGO

Chicago has a new Spanish speaking Amateur Radio club. KB9ISW says that the Acciacion Iberoamericana de Radio Aficionados now has a weekly information net on Saturdays on 14.240 MHz at 19:00 UTC, and everyone is welcome.
Also, if you are planning a trip to the Windy City the group also sponsors a local daily net on VHF on 146.460 simplex at 02:00 UTC. They also plan to put up the first Spanish speaking UHF repeater in the Chicago on the 444.825 and 449.825 channel pair. The access tone will be 114.8 hertz.

(*****
FUND ADMINISTRATORS REPORT

And speaking about radio clubs, its time to recognize some of them who have helped keep Newsline on the air this past month and, hopefully, for months to come.
Salt Lake City, Utah begins the Newsline Support Fund report for February where we heard from Linda Reader and Chris Levin. Lt. Colonel John Bash, KG7HL wrote us from Tucson and we heard from Kenneth Covey, W0ZQJ from Moorhead, MN. We also heard from Seymour Field, KB9IKO of Park Forrest, Il and the Muncie, IN Area Amateur Radio Club. Finally from the Golden State we heard from Allan L. Gieger, KG6FBN and N6LNX of Huntington Beach, Bruce Johnston, NK6C of Oakdale, Robert Biggers, KE6ASD of Whitier, Betty Ann Casono, KB6GBU of Shasta Lake, Jim Walls, WB6WMW of Glendora, the Gears Radio Club of Chino and the Sanoma County Radio Amateurs of Santa Rosa. A BIG thanks also to the Antelope Valley Amateur Radio Club K6OX, many of whom we met at their club meeting last month. Remember the clubs who support us, with the Club name, repeater callsign and service area get a mention during

the newscast id break.

(*****
DX: IOTA CONVENTION

In DX, I0JQJ reports that the Fifth annual Islands On The Air Convention, organized by the Associazione Radioamatori Italiani will be held in Bologna, Italy from October 13th to the 15th. For more information write to Mauro Pregliasco, I0JQJ, the IOTA Country Assistant for Italy at his Callbook address.

(*****
NAB HAM RADIO GATHERING

And finally, this note for hams planning to attend the upcoming National Association of Broadcasters Convention in Las Vegas from April 8th to the 13th. Word that the annual NAB Ham Radio Reception will be held after all. Its scheduled for 6 PM on the evening of Wednesday April the 12th at the convention site hotel. Watch for postings or check with the on-site information service to find out in which meeting room it will be held. Hope to see some of you at NAB '95.

(*****

What sort of scope do you have that can accurately measure the
power of a 70 cm signal? Even our Tektronix 485 doesn't do a
good job up there. Normally, I use a HP wattmeter and a calibrated
attenuator.

: >
: >Is one less hard on the rig than the others?

If a radio uses relays, full break-in results in more relay
cyles. This may be a problem. For instance lifetime of
expensive vacuum relays used in high power amplifiers is on
the order of 1 to 10 million cycles. For some stations, this
could mean a lifetime of only two years.

I mount my yaesu 5100 temporarily by removing the non-functional ash-tray like plastic insert from the front of the center console. I then take a piece of steel (1" x 5" or so) - which just fits inside the hole, and bolt the mobile mounting bracket to the piece of steel. The radio then snaps in very nicely.

Its a little tricky to do the bolting - but Ive never dropped the nut or bolts.

I routed power cables along side the console, under the plastic - so they can't be seen.

I think I read that Toyota has a service note for operating radios in their cars - you might check with the dealer.

BTW - Ive got a 1992 V6 Camry, w / automatic.

Dad's experience was that the clerk tried to sell him vanity plates for his call sign. That's when we resorted to copying the Vehicle Code section to show the clerk. (And after THAT, the clerk still had to go ask for help...)

Message-ID: <NEWTNews.16004.796320451.drayegon@drayegon.america.com>
Source record: 249874

This one is a really bad question. If you have passed your novice test you should know the answer. It is answered there as question(N1J08) FFC[97.405a] "You are allowed to help on a frequency outside your privlages in any way possible." also question N1J11 When may you send a distress signal on any frequency? "In a life-or property-threatening emergency."

Now lets get on to really important questions. Can a police officer arrest you and or confiscate your radio. Yes he can but he may have to give it back. The jury is still out on that one. ie: the supreme court.

What it boils down to is the loss of a radio worth the help and saftey to human life?

Mine is.

>change it.

Ziv,

Your problem is not so uncommon. *Everyone* has a certain speed,
at which he can't copy all anymore:-)

How to increase it? well, by practizing. A good idea is to allways
do your practizing at a speed where you only copy 80 %. This
way cou will learn the fastest.

Good Luck, Moritz DL5UH

4189. Re: Why contest?

In a previous article, mikech@hysteria.bri.hp.com (Mike Chaloner) says:

>
>Does one QSL to stations contacted in a contest?
>

Absolutely! I personally don't request a card from EVERYBODY I work in a contest, but I do receive LOTS of requests for my contest operating.

If I work an all-time new country for me, OF COURSE I'll QSL that station. I'll also QSL a station if they're a new country for me on a certain band or mode.

Example: This weekend, I worked an IT9 (Sicily). I've got several IT9's in my log, but this was on 160 meters. That's the first IT9 I've worked on 160 (Actually it's the first European I've worked on 160). You bet I'm sending him a card!

: the HT draws somewhere around 1.55 amps at 14v. To compare, my Alinco
: HT draws 1 amp and produces 5 watts. Theas measurements were taken with
: the HTs transmitting into a discone with an SWR of about 1.3. In my car,
: the SWR is about 1.2.

David: Those are safe operating currents. As long as you don't
exceed 1.7 Amps and you are getting more than 6 watts out, you
are within the rated values. Enjoy.

Presumeably they mean 0.3 MHz, in order that us poor sods in Region 1 can
have the same as you lucky bleeders in Region 2!

Unfortunately the 7.1 to 7.3 portion of the band is currently full of Radio
Moscow over here.

My understanding was that PCM was developed to save copper in telephone networks.

The telephone circuit is filtered to prevent anything above 4 KHz being digitised (to avoid aliasing), then sampled at 8 KHz with 2^8 bits (256). This gives rise to a 64 kbps bitstream, which can be multiplexed upwards to give 24 channels (as in North America and Japan) on a 1.544 Mbps stream (aka T1) or 32 channels (as in Europe) on a 2.048 Mbps stream (aka E1). In reality the synchronisation and signalling system used on E1 reduces it to 30 channels.

I think you're talking about PWM, which is something very different.

Cheers,

>>How about the more general question: anyone, licensed or not,
may talk on the mike of an amateur station, provided the
station is under the control of a properly licensed operator.

Is this true also of CW? I.e., may an unlicensed person operate
the key of an amateur station provided the properly licensed
operator in control of the station is present?<<

Yes - provided, of course, that the person knows how to send Morse Code,
and (same rule as for voice) that the contact is domestic or with a
station in a country with which the US has a third-party agreement, since
a non-licensed person at the mic or key is considered a 3rd party.

Just be sure you are buying the CONTINUOUS DUTY power amp and not the one in the mobiles. The continuous duty versions use different heat sinks, micro-strips, and RF parasitic suppressor components depending on the specific sub-band. The mobile intermittent duty versions were not designed for high duty cycle use. They can easily go unstable if keyed for more than five minutes at a time at more than 40% of full power.
Also, check those transistor part numbers one more time. They don't agree with the numbers shown in any of the service manuals in my reference library for LB, HB, or UHF!

There is a wide-coverage 2-meter repeater in Jessup, MD (halfway between Washington & Baltimore) with a remote receive site on Capitol Hill. It's on 146.76 MHz (transmit on 146.16). I've worked through that machine into Philadelphia while standing in front of the Supreme Court with an HT. There's also the AMSAT repeater on 146.85 and depending on where you are, you might be able to hit two popular Northern Virginia repeaters on 146.79 and 146.91.

Have a good trip and 73,

Since the noise does NOT change pitch with engine speed, it is highly
unlikely that it is coming from the ignition itself. More likely the cause
is spray from the clock of the microprocessor that controls the various
related functions. Check to see if they offer a SHIELDED ignition control
module and claim that it should be installed at no cost to you.

|The CA DMV might need a bit of convincing, though.
|
|
|Jeff NH6IL (who used to have WA6QIJ plates on a green VW bug)

Unfortunately, the form you fill out doesn't have a space for you
to indicate what you want on the plate. The get your call sign
from the copy of your unexpired FCC license, which must accompany
the form. Also, the form specifically states that only one set
of plates may be obtained. I remember someone saying that this
means that if the plates are lost or stolen, you can not get
another set of CA plates with the same call sign!

|>a radio from scratch, is not illegal. I have never disputed that you are
|>then responsible for ensuring part 15 compliance, should you choose to
|>operate it.
|>
|>-Brian
|>
|
|Hi Brian:
|
|I agree with you, except for one thing. I don't find a requirement in CFR 47 for
|compliance with part 15, except as it applies to the original manufacturer of the
|product. Nor do I find anything that states that equipment operated by a ham
|must meet this particular section of the rules.

You may be right, as I have never even seen the full CFR 47, much less studied all
of it. My understanding, however, was that anyone (being a "ham" has nothing to
do with it) operating a device that could interfere with other radio transmissions
was responsible for part 15 compliance. In other words, if your desktop computer
is causing interference to someones radio communications, you are responsible for
fixing the problem, or shutting it off.

|In other words, I believe the only requirement for meeting part 15 falls on the
|original commercial manufacturer, and that otherwise, the operator is responsible
|only to insure that his equipment meets specifications for spurious and such items
|listed in other parts of the Rules.

I thought part 15 was the part that would cover an unintentional radiator (I believe
that is the term) that you might build yourself, such as a radio receiver.

|A piece of commercial equipment which is proven to be in violation of part 15 carries
|the possibility of punitive measures only for the original manufacturer, and only
|if it is proven that the violation is specifically due to a failure on his part.

Punitive measures are another issue! I never meant to imply that you would be fined
or jailed for exceeding part 15 standards, only that you may be asked to fix your
equipment or turn it off.

|Let me know if you believe this is incorrect.

You seem to know more about it than I do!

-Brian

FOR SALE: GAP Challenger DX-VIII antenna
HF vertical, 33 ft. high
Covers 80, 40, 20, 15, 12, 10, 6, 2 meters
Bandwidth: entire band on 40 thru 2 m., 90 kHz on 80 m.
I will include 3 (required) 25 ft. 14 ga. radial wires
Works great on 40 meters
Works well on 20 meters
As good as any other short antenna on 80 meters
Receives RS satellites well on 10 meters
Works best when ground mounted (don't ask me why!)
1 1/2 years old. Good condition, with all documentation

Asking $175 will ship UPS

>carrier (PCM).

Greetings:

I have had experience with a few different PCM systems. They all worked on the principle of sampling the audio at regular intervals and conversion to a digital word with some form of an A-D convertor. A digital CODEC was used to provide finer quantizing steps for lower level samples for signal to quantization noise considerations. I do not understand how you can generate PCM by simply over driving an FM amplifier. This might produce a form of PWM (pulse width modulation) which is a type of analog modulation which is much different than digital PCM that carries the audio in the form of a serial bit stream of binary words.

>> carrier (PCM).

PCM stands for *pulse-code modulation* and is not the same as other
forms referred to generically as pulse modulation (including pulse
amplitude modulation (PAM), pulse width modulation (PWM), and pulse
duration modultion (PDM)).

PCM involves the conversion of a waveform from analog to digital
form by means of coding; it is a *true digital process*, unlike
the pulse modulation schemes. The encoding process is described quite
well in "Handbook of Electronic Communication Systems" by Gary M. Miller
(Prentice-Hall, 1979), and involves a set of amplitude levels and sampling timeswith the
former referred to as *quantizing* levels. At each sampling
interval the analog signal amplitude is quantized into the closest
available quantization level, so the A/D converter outputs a series of
pulses representing that level. For television picture transmission, 8-bit
quantiztion level and a 10 MHz sampling rate produce excellent fidelity TV.

PCM is the most noise-resistant type of transmission system, and lends
itself quite well to TDM (time-division multiplexing). Due to its true
digital nature, it is very adaptable to microprocessor-controlled comms
equipment and to the transmission of digital data. It is the preferred
(and most common) method for relaying live TV transmissions to all parts of
the country. Since each reamplification (in a repeater, say) can only
aggravate the S/N ratio, it is critical to use the most noise-immune
system possible, and this is where PCM shines best; it can be theoretically
shown that a 21 dB S/N can be repeated indefinitely without degradation
using PCM.

One example of PCM use in a complex structure is to have NB channels
pulse-encoded and used to amplitude-modulate a subcarrier, which is then
converted to SSB. Single WB channels may also be converted to SSB as
well, with all the SSB signals fed to a adder/amplifier and thence to
a FM modulator to frequency-modulate the main carrier. Such a cheme
(oops!) scheme would be called PCM/SSB/FM, but there are many other
combinations which can (and have) been used.

Hi Jeff. Isn't the issue here what to do if conventional means
of communication (ham radio repeater, cell cite, etc.) are not
at all available? I don't think that any sane person would
disagree that these should be used if at all possible. There
are still a lot of areas where no cellular coverage exists.
Also, some folks don't have cellular phones.

I never thought that I would ever have to use a radio out of band
until the big fire in Oakland, California in October 1991. But I
did. I was monitoring a lot of communications, and I found that
the Red Cross was about to send two of their non-fire personnel
up a canyon that was soon to be ungulfed by the fire, all because
they had confused the Claremont County Club with Country Club
Drive. I nervously keyed up and identified myself as an amateur
radio operator, informed them of their confusion, and was asked
to stand by. After they checked their maps, they thanked me very
graciously as they had discovered their mistake just as their two
people were about to leave. That one time I was glad that I had
sucked the diode in question out of my little Yaesu FT-470...

4216. HamRadio '95 - Atlanta - April 7/8/9

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-27 20:31:17 UTC
From: Jim Stafford-W4QO <w4qo@america.net>
Message-ID: <Pine.SV4.3.91.950327153027.17151A-100000@atl1.america.net>
Source record: 249870

A new hamfest called HamRadio 95 is coming to Atlanta on April 7-8-9,1995. To be held at the North Atlanta Trade Center off I-85 and Indian Trail, the show promises to be a good one with all the big major commercial exhibitors in attendance on Saturday and Sunday. Hundreds of flea market spaces will open at noon on Friday.

To be held concurrently will be DXPO 95, a DXers delight sponsored by the Southeastern DX Club. A full track of forum speakers includes Al Hernandez, VP8SGP who has just have returned from South Georgia Island. Tony DePrato, WA4JQS, of the Peter I expedition and many other famous DXers will be speaking and in attendance. A DXPO hospitality room will be open for business at 8 PM Saturday. A DX Breakfast will start at 8:30 AM on Sunday at Shoney's with Bill Moore of the ARRL DX desk as the speaker.

Bob Grove will be a featured speaker at a Saturday SWL forum. Other forums include a QRP forum with Paul Carr, N4PC, CQ author, and Packet with Buck Rogers, K4ABT, also of CQ fame. This convention will host a number of representatives from the ARRL including Rick Palms and Frank Butler. A section called the Radio Zone will be for youth and will feature Cynthia Wall, KA7ITT, author of Night Signals. Don Miller, W9NTP, will be the featured speaker at the ATV forum on Saturday afternoon.

QCWA, SERA, MARS, the FCC, ATV, and the SE Antique Radio Society will also be topics of discussion and presentation. For further information, call 404-518-7376 or fax 404-642-9035. Dogwoods are in bloom, so join us for HamRadio 95!

: Actually, they should have named the license class the
: Codeless "I always have an excuse not to do the code" Technician.

: You found time to study the theory, didn't you?

I can't speak for the gentleman your responding to, but for myself...
There is no way I could learn code in the fifteen minutes I spent to study
the theory for a tech no-code license. Let's face it, the only thing that
doesn't come inherent in a set of good tehcnical know how is the rules and
laws. Those took about fifteen minutes total. Everything else on the
test was pretty straight forward.
I wasn't alone on this. The other person I took the test with
studied the rules for about 15 minutes in the parking lot. He had enough
of the other stuff from his bachelor degree to pass the rest of the exam.
This has also been true for most of the engineering students from here
that have gotten their no-code licenses(under an hour or two total).
Code and HF just doesn't interest us. Maybe there should be two
set of incentive tests. Code and theory for HF privleges, and extra theory
for UHF and above privs. This way I don't have to learn code, and an
incentive plan would exist that I would be interested in.

73,

Shawn

I have been to Disneyland several times, and have never had any trouble
bring my ht in. In fact there is a disney repeater. I believe it is
146.940, but sorry don't have the pl right off. I am sure someone is
lurking that can bring it up in a heartbeat. 73

So can we figure that it will not be operable on say, 145.110 (down .600)? The input would be at 144.510. If the HTX212 doesn't transmit below 144.6, I guess people who use a repeater on 145.11 are SOL.

4223. Possible Repeater Licensing Proposals...

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-27 22:10:00 UTC
From: fletcher@moho.uwyo.EDU
Message-ID: <199503272219.OAA03245@UCSD.EDU>
Source record: 249881

This is a request for any information having to do with any current or known upcoming proposals -to- or -by- the FCC with regard to specific licensing of amateur stations in repeater service.

I have in front of me a form ostensibly sanctioned by the Mid-America Coordination Council (an organization I have never heard of). In the first paragraph a vague reference is made to "possible FCC regulatory proposals". The second paragraph cites the "proposal" (vaguely cited in the first paragraph) as justification for advising the providing of certain information to the applicable frequency coordination authority since it will be necessary for the operator of an amateur repeater to obtain an FCC amateur repeater license.

Thank you,
Reid, WB7CJO

4225. Balloon Launch April 8 - Wisconsin

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-27 22:44:34 UTC
From: djmullen@facstaff.wisc.edu
Message-ID: <3l7f4i$2c6@news.doit.wisc.edu>
Source record: 249887

The Badger Amateur Radio Society and the High Altitude Radio Project
announce
The Launch of the BARS 1 Weather Balloon

Launch Date: Saturday, April 8, 1995 (Rain dates April 9 and Easter Weekend)
Launch Time: 9:00 - 10:00 AM CDT (14:00 - 15:00 UT)
Launch Site: Hillsboro, Wisconsin (About 20 miles W. of Wisconsin Dells)

ATV transmit freq: 439.25 3 watts Color
GPS/APRS Packet TX: 441.05 2 watts 1200 baud packet
Cross-Band Repeater Output: 439.25 3 watts FM (Same as ATV output)
Cross-Band Repeater Input: Two Meters - frequency to be announced.

Note that the crossband repeater output and the ATV transmitter are on the same frequency. The ATV transmitter's carrier is FM Modulated with the voice signal. The voice and TV signals don't interfere with each other.

This flight will be BARS' entry in the 1995 University of Wisconsin Engineering Expo, a bi-annual display of student engineering prowess that is scheduled for April 21-23 on the University of Wisconsin, Madison campus.

This will be a weather balloon carrying a color TV camera, an ATV transmitter and a crossband voice repeater. The balloon will also carry a Global Positioning Receiver and a packet transmitter that sends lattitude, longitude and altitude in a format that can be used by the APRS packet program to draw a map and plot the balloon's position on it. This will be a standard ASCII packet signal and people without the APRS program can read the balloon's position directly with their regular packet gear. No connects or digipeating through the balloon will be possible.

After the flight, the payload and video tapes of the balloon signals will be displayed at the University of Wisconsin's Engineering Expo, which runs from April 21-23 (the weekend after Easter).

The winds aloft are quite vigorous at this time of the year. Typical wind speeds reach 40 to 100 miles per hour or higher. If the winds are heavy on launch day, we'll try to keep the maximum altitude down to about 50,000 ft to keep the balloon from landing in Lake Michigan. If winds are light, we'll go for 100,000 feet.

Balloon chasers are very much wanted and everybody is invited to join the chase. You don't really need any DF equipment - if you're a hunter with a good pair of boots, you may be worth your weight in gold if the balloon lands in a bad location. People who can climb trees may be just as valuable.

The launch will be announced on the Baraboo 146.88 repeater the morning of April 8th. We expect to do most of the chase-crew co-ordination using the balloon's cross band repeater.

REPly to this message for more information or email me at djmullen@facstaff.wisc.edu

For BARS, Dave, N9LTD

Burt,
(I did not snip your message in case you would like to post elswhere in toto) (Not the dog)

BF>It has come to my attention that Alex AA1JY is out as net manager and
BF>has been replaced. When no one wanted the job Alex took it and decided
BF>that a traffic net ought to be a traffic net (what a novel idea?). He
BF>worked hard and made some unpopular changes (but professional). I have
BF>always known that the CITN was never a traffic net but a social net but
BF>Alex was fool enough to believe the "T" stood for traffic. So he
BF>eliminated the little games that were played on the net. After "trivia"
BF>was removed WA1AOH and his associates took their marbles and were
BF>rarely heard from again on the net U N T I L, Alex left, than
BF>strangely enough all the "old boys" reappeared. Is it any wonder that in
BF>the past ten years hundreds of young hams have been licensed and almost
BF>none get on the air?
BF>
BF>Cape Cod hams are the laziest form of humanity ever known (except
BF>Falmouth). Several years ago no one volunteered to edit the Barnstable
BF>Radio Club newsletter, I, as a non member, stepped forward and in each
BF>issue trashed the members "get up and go." Still I was not removed. Alex
BF>volunteered to be net manager because no one else would and when he
BF>was unable to be controlled by the "old boys (farts) network", the "old
BF>boys" did not even have the courage to fire him. The Barnstable Radio
BF>Club has a long history of Presidents that when they leave office the
BF>never return to the club (disgusted with the laziness?). The most recent
BF>President barely has her license so she was "drafted" because the "old
BF>boys" were too lazy. From what I have heard about her she is quite
BF>competent, thus I expect she will not stay on too long.
BF>
BF>My outlook on ham radio is soured by the locals and I bet if I lived off
BF>Cape Cod I would see hams in a different light. I am thought of as an
BF>ass by many but I consider that a character plus to be disliked by bozos.
BF>
BF>Burt K1OIK

Your message is a sad testimonial to the present state of ham radio.
You said that if you lived elsewhere the ham atmosphere would be different.
Well, I'm afraid not.
Before I left for Florida on February 15th I put my call sign on the
rear of my travel trailer in 3" high Scotchlite letters along with "52 SIMP"
From Cape Cod to Tampa Fla. I did not receive ONE call. Since I don't
travel as fast as the automobile traffic most would pass me. During the
trip about 15 hams with vanity plates passed me. The majority had 5/8 whips
which I'm sure were not CB. I called every one. No response. Well actually

not true, one waved. Obviously N1SGN is a new call therefore not worthy of a reply or a call. I wonder what will happen when I get my old WA1FSC call back? I also wonder what would have happened if one of them needed assistance and remembered passing me? I bet I'd get a call then. (Funny, my radio dosen't seem to receive any more) I would be sure to wave back as I continued on my way. But no, I'm not like them. I WOULD stop and assist.
You mentioned in one of our discussions about the hundreds of new young hams who, after being exposed to this pompous, ignorant mentality have given up the hobby. And the few who stay become cloned and stagnate in the mire of the cancerous disease spread by these old men with no lives. How do we encourage these young people to stick with the hobby? I suppose by example. If we get frustrated and quit, what will be left. Look at the local condition. Ron McLeod, K1FTB, who lives in Englewood, FL dosen't even use his 2M HT any more. He said it depresses him. However when he knew I was in the area he kept it on every day. And when I did call him when I got to Sarasota we talked for almost a half hour. Had to end the QSO when the old farts started doubling on me and making remarks. Sad, sad, sad.....
However we are not alone. There are many who feel the way we do. Sarasota, FL has four active repeaters. Three of them have the cancer but 147.300 is definitely a refreshing experience. It's courtesy tone is a cricket chirp, which caught my attention, no annoying messages, no NETS. The hams on that repeater have a sense of humor and talk about interesting subjects. No colostomy bags, coffee breaks, Medicaid bill problems, or endless pissing and moaning. My first transmission, "N1SGN hanging out in Sarasota", got a lot of attention. Real nice guys AND gals, NICE HAMS!
So Burt, hang in there. All is not lost as long as we don't give in. Maybe we just have to set an example to keep the young ones interested. I gave up once before, that was a mistake.

73
N1SGN

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 27/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 27 MARCH AND FORECAST FOR 28 MARCH - 30 MARCH

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 89/33

GOES satellite data for 26 Mar
Daily Proton Fluence >1 MeV: 3.7E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 3.7E+06 (normal)
X-ray background: B1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
28 Mar 29 Mar 30 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 28 Mar: 90/34

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 26 Mar
Learmonth 20 4233 4344
Fredericksburg 20 20
Planetary 25 32

Observed Kp for 26 Mar: 2146 6443
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
28 Mar 20 Unsettled to active
29 Mar 20 Unsettled to active
30 Mar 15 Quiet to unsettled, with possible active periods.
COMMENT: IPS Geomagnetic Disturbance Warning 95/08 was issued on 24
March and is current for interval 26 - 31 March.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
27 Mar fair-normal fair-normal poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Mar normal fair-normal poor-fair
29 Mar normal fair-normal poor-fair
30 Mar normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
27 Mar -10 15 to 20% below predicted monthly values in the first
half UT day, near normal otherwise. Spread F was observed throughtout
the day.

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
28 Mar 0 Near normal to slightly depressed.
29 Mar 0 Near normal to slightly depressed.
30 Mar 10 Near predicted monthly values

COMMENT: IPS HF Communications Warning 12 was issued on 27 March and
is current for interval 27-30 March. Observed frequencies at Townsville
yesterday were 15-40% and at Hobart were 15-20% depressed in the
first half UT day and near normal otherwise.

Announcing:

Little Rock Hamfest and Arkansas State ARRL Convention
at
The Little Rock Expo Center
formerly The Outlet Mall, same location as last year
March 31 - April 1, 1995
Friday, March 31, 4:00pm - 9:00 pm
Saturday, April 1, 8:00am - 5:00pm

Exit 126 on Interstate 30, Southwest of Little Rock

Admission: $7.00 per person

Theme: INTEGRATED COMMUNICATIONS IN EMERGENCIES

There is approximately 135,000 square feet of indoor space, with excellent lighting, heat and air conditioning, wide hallways, over 1000 parking spaces, handicapped access through all entrances, and much more.

There will be many dealers, flea market, tail-gates, exhibitors and forums. Special items of interest will be working stations on packet, amateur television and satellite. There will be a technical table, youth activities, home builders contest, fox hunts, C. W. Contest and Wouff-Hong. Participants will include The National Weather Service, Office of Emergency Services, ARES-RACES and MARS.

Special Exhibits:
Military Communications Unit Displays
State OES Communications Van
Mobile Emergency Communications Vehicles
Television Station Satellites
Antique Amateur Radio Show
and more

Sponsored by: CAREN, Inc. (Central Arkansas Radio Emergency Net)
P. O. Box 2893
Little Rock, AR 72203-2893

4234. HAM-server Information

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-28 00:00:00 UTC
From: HAMSinfo@GRAFex.sbay.org
Message-ID: <gate.RZiP3c1w165w@GRAFex.sbay.org>
Source record: 249858
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Distribution: world
Subject: HAM-server information

HAM-server was devised to allow people without direct internet access a way
to get amateur radio related programs and other information. It is not
directly on the internet, so ftp and telnet is not available.

Most of the files on HAM-server are available via ftp from the various sites
around the world that archive them. That's where I got most of them.

In addition to DOS files, there are some Mac ,Linux, and OS/2 files available.
I'm always on the look out for more (particularly Mac, Linux, OS/2).
See below.

General Information:
====================

There is a daily limit of ALL requests of 3-megs. There is an individual
limit of 1.2-megs. If there are a series of files you want to order,
stretch them out over a few days, rather than ordering all at once.
That way, you are almost assured of getting them all, and you won't be
blocking others from getting their orders filled.

ASCII (text) files are split at about 59,000 bytes. UUENCODED binary files
are split at about 750 lines.

A new INDEX is automatically generated every Sunday.

Ordering Information:
=====================

Send an email to:

HAM-server@GRAFex.sbay.org

In the text of the message, place:

HELP
GET /hamradio/INDEX.TXT
QUIT

HELP will send you the HAM-server HELP file. This is processed immediately
for return delivery.

o DOS

If you are using a PC and you do not have UUDECODE, order
UUDECODE.BAS or UUDECODE.C and UUEXE525.EXE. Compile on your

system then uudecode UUEXE525.EXE. This is a self-extracting archive of UUENCODE and UUDECODE, with documentation. This will work for DOS and OS/2.

o OS/2

I highly reccomend UNZ512X2.EXE. This is InfoZip's ZIP and UNZIP (plus other stuff). Will dearchive PKUNZIPped files, as well as UNIX zipped files.

o Macintosh

Most Mac programs are stored in binhex (.HQX). You will need a utility, such as StuffIt to decode. There are also UUDECODErs and other de-archivers available. See the index for /hamradio/macstuff/utility.

o Linux

Use UNZIP.

Some Reasons Why Ordered Files Are Not Received:
==========

o If you are ordering from a ccmail system, be advised that ccmail in its default configuration attempts to automatically UUDECODE files. If your order is sent in parts, it will hiccup after the first part. See your system administrator.

o Your return path is incorrect. My bounce mailbox fills up quite regularly with messages. And, since the path is incorrect, I cannot contact you to let you know. Try the PING command to check that the path is open.

o You have spelled the file name incorrectly. Check the INDEX.

o You have entered your request incorrectly. Check the HELP file for correct syntax.

o The file name has changed since the INDEX was generated. Order a new INDEX. See the HELP file for the NEWFILES command.

o You sent your order to me personally or in reply to this post. Orders are only honored when sent to HAM-server@grafex.sbay.org. That's the way the software works.

YOUR HELP IS NEEDED:
==========

If you have a program you would like placed on HAM-server, you can email it uuencoded (DOS, Linux, and OS/2) or binhexed (Mac) to

incoming@grafex.sbay.org

This email address is set up to flag me that there is something new that I need to take care of quickly.

4235. Stacking Tri-bander & WARC Anetnnas?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-28 00:00:00 UTC
From: dearnshaw@worldbank.org
Message-ID: <3lp4vd$cns@minerva.worldbank.org>
Source record: 249859

Hi,

I am in the stage of re-errecting my trusty old TH7DXX on a new tower. One thought that occurred to me was maybe stacking it with a WARC-only antenna (such as the Cushcraft AWS-3?). Does anyone have any observations, recommendations, comments on this "thought?"

- Will the AWS detract performance-wise from the TH7 (they're not harmonically related)?

- If not, what sort of (practical) spacing should I be looking at?

- Has anyone any experience with stacking conventional tri-banders with WARC antennas, and if so, would you do it again?

Thanks, Darrell (NR3Y/G4MZF)

4236. WTB: Motorola P200/HT600 speaker mics

>Do you have instructions for that particular model?
>

Unfortunately, the mechanics of every tuner differ and I am hesitant to try and provide specific instructions. As mentioned in an earlier post, the basic modification requires insulating all of the tuned components from the chassis of the tuner. Also, my tuner was originally a "T" network, and I converted it to a Pi network during the same mods (for improved harmonic suppression). If you did not see the post that talks about this, let me know and I will e-mail a copy.

Obviously, a schematic would also be helpful. I don't have a scanner, so I have to use my fax machine to send the picture to my modem. Then I use fax software to convert to PCX. The process is simple but the quality suffers. If I can produce a legible copy, I will make it available in UUE format. BTW, there's a QRP tuner in the 1988 ARRL Handbook that uses this same technique, although it does not show the external options that can be utilized.

>
>I am also puzzled by your insistence on using ladder line.

>your mod even when using coax, albeit you will have large
>losses in the coax at high SWR (as always).
>

You are right about the loss in the coax and it can be significant, but that's not the only reason for the use of ladder line. Let me try to explain what goes wrong when using coax.

First, let's assume the tuner feeds the coax, and the coax feeds the antenna through a balun. All transformers are designed to operate over a particular frequency range and with specific input/output impedances. This is as true for baluns as it is for any other device that uses magnetic/capacitive coupling.

Whenever the antenna is not resonant, the impedance seen by the balun can vary widely. It can become very low or very high, but in any event, far removed from the design parameters. In some cases,

the core may saturate as a result, although it is my understanding that some of the newer and more expensive core materials provide better protection from this. Other effects, dependant on frequency and impedance, include A) the primary winding electrically decouples from the secondary, B) the primary and secondary effectively "short" together, and C) The primary and secondary decouple, but the primary also loses it's minimum required reactance and becomes a shunt across the transmitter.

Regardless of the effect, the bottom line is that the balun has lost transformer action, which means it is no longer converting the unbalanced input to a balanced output. This, coupled with the high VSWR (which tends to exacerbate feedline radiation), causes RF to flow on the braid of the coax, and to the chassis of the rig.

It would require a *very* short, very stout ground to earth to relieve the symptoms of this RF. Such a ground is nearly a physical impossiblity, especially in multiband, non-resonant operation. Nevertheless, even if this were possible, the coax and balun would continue to dissipate RF in the form of wasted heat.

Following are the goals for the modifications:

1. ENSURE THAT THE BALUN IS NOT EXPOSED TO IMPEDANCES OUTSIDE ITS DESIGN PARAMETERS - This is done by moving the balun to the input side of the tuner's components. Once this is done, a reading of 1:1 VSWR at the output of the transmitter will mean that the balun is seeing it's designed input/output impedance. Further, because the tuner is compensating for the reactive comnponents of the antenna, the balun looks into a resistive load.

2. MINIMIZE FEEDLINE LOSSES - Ladder line is capable of handling extremely high VSWR without arc-over and without appreciable loss.

3. MINIMIZE FEEDLINE RADIATION - Because the balun has been relocated from the center of the dipole, the antenna now presents a balanced load to the feedline. In order to maintain that balance, which consequently minimizes feedline radiation, the line must also be balanced. Again, ladder line serves this purpose.

4. MINIMIZE RF ON THE CHASSIS OF THE RIG - RF can appear on the chassis anytime the unbalanced output of the rig is fed to a balanced load. The problem worsens with high VSWR because reflections from the antenna create voltage peaks and troughs along the transmission line. If one side of the line is connected to the chassis, as with coax, and the chassis is positioned at or near a peak, RF voltage levels can be very high.

Looking backwards from the antenna in the modified system, the antenna is balanced, the feedline is balanced, and the tuner components are balanced. At the point at which the conversion is made by the balun,

the reactive components have been removed by the tuner (so the balun cannot misbehave), and the rig looks into a 50 ohm, unbalanced, non-reactive load. Under these conditions, the chassis becomes the reference point it was intended to be and no longer carries significant RF currents.

Again, I "invented" this technique independantly, just like many other people <g>. It works exceptionally well, but I have no doubt that my explanations fail to do it justice. Please let me know if you have questions about this post, or if you would like my schematic of the modified tuner.

73,

Jack WB3U

|>>in the shack.
|>
|>This definition does not describe the symptoms under discussion. The persons
|>who asked for help do not agree with you. Haven't you read the earlier posts?

Oh good grief. Yes, I've read *all* the previous posts related to this
topic and I archive this newsgroup (among others.) So *please* explain where
my definition differs from the "symptoms under discussion".

|>>Please dismiss my contention with some evidence.
|>
|>The symptoms which were described are familiar to experienced operators.
|>I have explained why they occur, but if you believe an alternate explanation
|>is appropriate, please present it.

The symptoms, i.e. RF radiation from the feedline (and/or attached entities
such as the chassis of a rig or the wind shield on a microphone) occur
when the feedline becomes "part of the antenna system" and "not part of
the feedline/signal generation". If you have other examples of "RF in the
Shack" that occur due so something other than the feedline becoming part
of the antenna system, then please continue.

|>>High VSWR occurs as a result of impedance mismatch between the antenna
|>>system and the transceiver (or amplifier/tuner if either or both is used.)
|>
|>This is one of the most pervasive misconceptions in the amateur community.
|>VSWR results from attaching a reactive load to the feedline. The match
|>between transmitter and antenna system determines power transfer, not VSWR.

Well let's go back to basics. SWR is defined as:

SWR = (1+rho)/(1-rho)

rho is defined as:

rho = sqrt(Pr/Pf)

where Pr is the power in the reflected wave
Pf is the power in the forward wave

rho is also defined as:

rho = Zl-Zc / Zl+Zc

(from "Reflections")

where Zl is the load impedance
Zc is the characteristic impedance of the transmission line

For rho = 0, i.e. no reflection, then Zl = Zc. "However, the load must be purely resistive (R+j0) for zero reflection, because we are considering only lossless and low-loss lines with a characteristic impedance Zc that is purely resistive." from Reflections by Maxwell.

So, yes, a 1:1 VSWR requires both an impedance match and a non-reactive load.

|>>"RF in the shack" normally occurs as a result of feedline radiation
|>>occuring inside the shack. The two are related but neither is causal
|>>of the other. They can occur together or separately or alone.
|>
|>Didn't you say in your opening statement that they're the same thing?
|>You're contradicting your own argument.

I did? That's news to me.

|>>High VSWR by itself does *not* cause "RF in the shack"
|>
|>Maybe not in every situation, but the subject of this thread is high VSWR
|>that *does* cause RF in the shack.
|>
|>>and "RF in the shack" can occur with a VSWR of 1:1.
|>
|>I can think of only a few conditions that cause this, and again, all are
|>unrelated to this thread.

How are they unrelated? You stated that high VSWR is the "cause" of "RF in the shack" and I simply am trying to point out that it is not necessarily the case. You seem to have admitted that already with the caveat that it occurs in "only a few conditions".

|>
|>It is evident that you have missed both the purpose and relevance of these
|>posts. If the originals are no longer on your server, let me know and
|>I will copy you on them via e-mail.

As I said, I archive all the posts and would be glad to refer to them as necessary. You haven't given any reason as to why I should do so based upon my reading of all related posts.

Again, I simply state that high VSWR is not the sole cause of "RF in the shack" as you seem to imply.

>Node 2 - 01753 593524
>

Thats it I think you are right.

Ok thank you very much. I knew this was where to clear the cobwebs.

So lets talk about PWM. Lets say the FM carrier is 1 MHz.

You form a PWM carrier by clipping the FM carrier.
You take the unmodualted 1 MHz oscillator and clip it to form a
square-wave clock. Using this clock isn't it relatively easy to
convert the PWM into a bit stream?

4241. Kenwood TH-22AT Mod.

JB>Buy quality from a real ham radio dealer. Stay away from the Ft. Worth
JB>distributed junk.

JB>Regards,

JB>Duffy

You are WRONG.
I work at RS and I know where the stuff goes. There are several regional repair centers that the stuff is sent to. It is picked up by a special delivery service that carefully packs up the merchandise.

If you still think that the RS stuff isn't that good, you should try reading the rest of the posts about it! (I think you're the only one so far with a complaint.)

As for the extended warranty- You forget the fact that the warranty covers YOUR mistakes (i.e. dropping the unit) as well as manufacturer's defects, AND the warranty from Radio Shack is renewable at the end of three years.

Maybe you should do some research next time....

if you wish. many will answer and many will not. minor time discrepancies might make you hard to find in the log (due to either your clock or his being a bit off).

but there's nothing stopping you short of becoming the possessor of a bank account formerly known as "full".

Shades of the old WR# days. I guess back then (mid 70s) the FCC had
more time on their hands.

Jeff NH6IL

P.S. What happened to WR6AAA on Catalina Island? (I think it was
located in the control tower at the airport.) Is it still in op'n?

but we don't have to call you just because we see a call and frequency.

>travel as fast as the automobile traffic most would pass me. During the
>trip about 15 hams with vanity plates passed me. The majority had 5/8 whips
>which I'm sure were not CB. I called every one. No response. Well actually

odds are they weren't on 146.52 (assuming that they "know" that "52" is
equal to 146.52 MHz. could be 147.52, could be 52.000 on 6 m. and it could
be "channel 52" for the bootleg boys (at least i think they had one...)
down below 10 m but above CB.

>not true, one waved. Obviously N1SGN is a new call therefore not worthy of
>a reply or a call. I wonder what will happen when I get my old WA1FSC call
>back?

N's haven't been issued in florida for years, we're into the high KE's now
so any "n" sounds "old". again, no one has to answer your CQ. someone
sets up all the local repeaters and uses them regularly, probably won't
check simplex in the car or will be operating on a locally popular simplex
frequency that may not be 146.52 MHz.

maybe you should sweep the repeater outputs when on the trip in order to
find activity. someone using 1W with a 1/4 wave usually isn't much fun
to work on simplex unless you're travelling together so you stay in range.

i'd also put some creedence into the difficultly of setting up an
ad hoc frequency on some radios. driving before radio, y'know.

4248. Stealth antenna question

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-28 05:22:26 UTC
From: pgeorgeu@vanbc.wimsey.com
Message-ID: <3l86ei$a6m@vanbc.wimsey.com>
Source record: 249921
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc

It would really be appreciated if someone would help me with my question.

I live in a low rise apartment complex with an internal courtyard with some very nice trees up to 40 ft in height. I have worked out the logistics of setting up a long wire from my ground floor verandah to one of the upper branches of the tree. I will end up with an antenna of about 60 ft in length. The problem is one of visibility. I have read about using armature wire and magnet wire which is very fine. Will this be strong enough not to stretch (I believe it will) or break?

What about birds? I really don't want to be the cause of the death of some lovely little birds which visit the courtyard. Previously I used some thin insulated multi-strand copper wire at another location but I believe that I may have to go with even a less visible approach.

Any suggestions would be greatly appreciated.

Peter

between
>these two and which one you would recomend of these two. If you know
>anything about what features these have an comparisons between the two
>please e-mail me or post here. I will really appreciate any replies I
can

I can offer some information about these two radios. I bought an FT-530
over a year ago when I got my ticket. When my wife passed her exam in

May, I expected to get her a 530 as well but when we went looking, the TH-79A had just come out and caught her eye. Of course it was the most expensive dual-bander HRO had!

Let me start by saying that I really like my 530. However, there are some really nice features on the Kenwood. I think the alphanumeric display is really nice. Especially since there are so many repeaters in the SF Bay area. It is sometimes hard to keep them straight. The 79A is also considerably smaller. That was its main selling point for Anamaria. It fits nicely into her purse even with the rubber duck.

As far as other features go, the only other possible advantage of the TH-79A is the menu system for various features. It means you don't need the manual for a lot of things. Nonetheless, when I tried to remember how to enter a station in memory, it took a while to figure it out.

Both radios have essentially the same features as far as the transmitter/receiver go. I'm not sure what mods are available for the TH-79A but I've done the extended transmit/receive so I can use the 530 as an emergency backup for my marine VHF. One feature that the 530 has that I don't think is on the TH-79A is tone-scanning. If you don't know the PL on a station, and either it re-broadcasts the tone or you can get hear someone on the input, then you can scan for the tone to open the repeaters squelch. I've found that to be handy on a number of occasions.

In short, I think your friend will be quite happy with either radio.

Oh, one little difference is that the FT-530 has separate squelch nobs as the outside part of the volume controls for the two bands. The TH-79A sets the squelch with key presses. A little harder to make adjustments if you need to do it often.

> The second reason for grounding the rig has to do with RF.

I have heard that a proper RF ground should employ a large copper braid to maximize conductive surface area. I am going to buy some braid for this purpose. The ground connection on my rig is a little butterfly nut on a 3/32" threaded shaft (Kenwood TS450SAT). Most rigs I've seen have similar

little ground connections. Won't this small connector choke the ability
of the braid to carry RF to some extent? If so, then the braid must
be connected to the chassis? In other words, can I get an effective
RF ground by connecting only a few strands of the braid to the
grounding post on my rig?

> solid ground connection will prevent RF from "floating" on the
> equipment.

The bad thing about RF in my shack is that rig doesn't funtion
properly. Strange things happen that indicate that its little
brain is fried. The computer and TNC also act up. I run a Windom
dipole fed with coax into a 6:1 balun. When I operate on bands with
a low VSWR, everything works great. The trouble starts when I
try to operate using the antenna tuner.

> the system absolutely requires a ladder line feeder, so it's
> not for everyone. E-mail me if you're interested.
>

I am interested...please e-mail me the info. I've always tried
to avoid ladder line, but now that I'm having trouble with coax
I'm willing to give it a try.

LARCFEST - Hamfest and Computer Swap

Sponsored by the Longmont Amateur Radio Club

Saturday, April 1, 1995 8:00am - 3:00pm
Boulder County Fairgrounds at Hover and Nelson Rd. Longmont, CO

****
****

One of Colorado biggest and best hamfest and computer swaps is coming
April 1.

Raffle prizes include: Kantronics KPC-3 TNC
PC Multimedia Upgrade Kit
(a $500 value!)

With a GRAND PRIZE: KENWOOD TS-50S HF TRANSCEIVER

Admission is only $4.00 per adult with children under 12 FREE
With your admission you will see a large selection of amateur radio
equipment as well as great values on computer hard and software.

Want to become a Ham? (A licenced amateur radio operator)
VE Exam sessions will be given during the day. CALL 303-776-9158
for more information.

*** Commercial Exhibitors will be there! ***
*** Food and Lots of Coffee Available ***

CAMPSITES WITH CAMPER HOOKUPS ARE AVAILABLE FOR THOSE COMING
FROM OUT OF TOWN. CALL 303-676-1525 FOR DETAILS

VENDORS!: (A few) Tables are still left for $8.00 each
(Does not include admission)

Reservation can be made by sending a check to:

L.A.R.C.
P.O. Box 86
Longmont, CO 80502-0086

or call for more details:

John Stransky KF0RQ 303-776-2110
Randy Stevens N0NMO 303-499-1106

Talk-in frequency is 147.87/27 LARC repeater or use simplex
146.52.

: I picked up a Motorola HT200 radio at a hamfest with a charger for a
: steal ($5) thinking I could maybe put mu local PD or Ambulance freq in it

Thats about the right price for a HT200 -- the radio is probaly older than you are :)

Before you get too far you might want to check the battery condition
Typically those are the most costly part of that vintage radio to replace

If the crystal has the correct carrier freq marked than someone has already
retuned the radio for the lower part of the band.
This may or maynot have required any mods to the radio.

My advise would be that if you cannot use the radio in its present
condition than dump it at the next hamfes to the radio.

Crystals,PL,manuals and a battery would cost more than what you
want to spend on a radio that old (unless your starting a Moto musuem :))

: (155. or 156. mhz) incase of somesort of life-or-death emerg. Can anyone
: tell me about this radio, I opened it up and saw a crystal in it for
: 146.94mhz, was this a ham rig to start, or did someone retune it?
: The crystal looks like a regular scanner crystal (like RS ones), is that
: what it is? I can't get it to charge, so I'm going to try feeding power
: from a supply into it directly.

From: NFullagar@ccgate.apl.COM (Fullagar, Neil)
Subject: out-of-band, emergency, etc.

>I've followed this ridiculous thread for at least 2 1/2 years. Rather than
trying to find loopholes in the law so you can satisfy this inner desire to
have a police-capable radio, why not instead arm yourself
with a repeater directory and a cell phone?

Golly gee, someone with an *even more* perverse and morbid facination with the
thread than my own! I'll certainly agree that there's been a lot of
absurdities put forth, from various quarters.

>Rather than trying to find loopholes in the law so you can satisfy this inner
desire to have a police-capable radio,

I don't see it as finding loophole. The law seems clear enough and if it
weren't, who cares? Let's say you've bought a mod'd HT at a hamfest. You
didn't but it to xmit on the state police frequency, but you know it will. Are
you saying you'll stand there and say "Gee, I could lose my license if I
transmit out of band" while someone bleeds to death before your eyes? If so,
I'm real sorry to hear that.

Is it just FFC regs that are too sacred to violate? Would you break into a
house that you knew contained a landline phone to report a life-threatening

emergency if there were no other means readily available?

Of course I would use other available resources first, but in a *real*
emergency I'll do what needs to be done and deal with the consequences later.
My guess is you would, too.

> why not instead arm yourself
with a repeater directory and a cell phone?

I have both, as a matter of fact. And I take them with me when I travel. And
often I carry BOTH an HT and a cell phone on my bicycle. But there's an awful
lot of road out there where there's no cell service, despite cellular industry
talk about "statewide coverage" and such.

And numerous repeaters require (unpublished) PL tones. (Actually, that brings
up an interesting point - why on earth does the ARRL accept director listings
of "open" repeaters that specify that a tone is required but don't specify the
tone??) And a ham repeater isn't much use in an emergency unless there's
someone else there to talk to - someone who isn't also mobile, miles from a
phone.

Personally, I intend to make the mods to my HT and VHF/UHF mobile, not so I can
transmit out of band but so I can receive. I would like to see the
manufacturers design things so an rx mod could be done without the tx mod. To
avoid accidentally xmitting where I don't mean to, I'll have to do some
creative frequency split programming - which I'll do.

>Jeff NH6IL (who carries a 200W 162.55 MHz transmitter with 1050 Hz tone
encoder with him so he can activate all weather radios within a 20 mile radius
`just in case'.)

Gosh, I hadn't thought of that... What kind of batteries do you use?

Neil KE6NCX

From: fletcher@moho.uwyo.EDU (Walter Reid Fletcher)
Subject: Possible Repeater Licensing Proposals...

This is a request for any information having to do with any current or known
upcoming proposals -to- or -by- the FCC with regard to specific licensing of
amateur stations in repeater service.

I have in front of me a form ostensibly sanctioned by the Mid-America
Coordination Council (an organization I have never heard of). In the
first paragraph a vague reference is made to "possible FCC regulatory
proposals". The second paragraph cites the "proposal" (vaguely cited
in the first paragraph) as justification for advising the providing of
certain information to the applicable frequency coordination authority
since it will be necessary for the operator of an amateur repeater to
obtain an FCC amateur repeater license.

Thank you,
Reid, WB7CJO

Realize, too, that the ham dealer is a specialty store that sells equipment
on a relatively small margin, compared to those margins enjoyed by high-
volume department stores such as aforementioned SEARS and Penney's. The
typical ham dealer cannot operate his/her business the same way, and
cannot afford a "no questions asked" type of return policy.

>parts changing than it's worth.

There are 3 basic frequency ranges for the VHF Micor. One of them
covers the 2 meter band without modification. The other two require
some capacitor changes for best results. It's not a big deal. The
most common model covers the commercial frequencies just above
the 2 meter band. You can either replace the capacitors with the
larger exact replacements called out in the Motorola manual, or
you can just parallel padders across them. The parts are fairly
non-critical, cheap, and easy to change.

At most major hamfests, such as Dayton, there will be hundreds and
hundreds of Micors stacked up for sale. While a cherry unit may
command a price of $100, you can get one with a working PA for
$50 or less with a bit of shopping and haggling.

Micors are becoming a bit more rare than they used to be. They
are getting pretty old now. But there are still plenty of them
out there to be found.

Don't let the few blow hards such as the misfits from Brown spoil your
interest. They are an extremely small minority and are similar to the
loud bigots one hears on 11 meters. If they can't stand on their own merits
and must stoop to denigrating you to boost themselves up, they aren't
worth your time. Ignore them and associate with those that respect you for
what you are, an amateur radio operator. Check out some of the local clubs
before giving up on amateur radio. I think you'll find that you'll be
welcomed with open arms. Another place to look for friendly operators is
to the VHF/UHF weak signal crowd and the satellite operators. I also
suspect that you'd be welcomed by most repeater groups.

Try it before letting the likes of Michael chase you away and relish in
the thought that he's in Rhode Island and not Ohio!

Subject: Re: Contesting - why?

Contests can be a lot of fun.....
They test your station and your operating skills....
There not for everyone.....
Before you knock 'em try it .....pick one you may have an interest in and
give it a go......you might get hooked or decide it's the dummest thing
around.
I tried a DX contest and did poorly .....that got me p..sed....I kept at
it until I won the section award (2 times), then that was it , too much
work.....
but I'm gettin the itch again.....

I have used number 24 guage copper wire and I have seen number 26
used to string to a tree from a window. They are very hard to see.
They DO stretch out, especially after a windy day, but I would just
draw some back, and after a few storms, would replace the whole thing.
Worked fine and was not noticed by neighbors. The replacement
procedure was a pain sometimes, but the antenna was so wonderful
to have that it was worth it.

Good luck.

Tom,

You might want to put a volt meter across your cigarette lighter plug. Start your engine, and rev up the engine a bit. You might be surprised to know that there is a heck of a lot more than 12 volts there.

Just a good laugh for those of us who have had to suffer the infantile behavior of a jammer...

I was monitoring a local 2M repeater today, on the way home from work, waiting for my buddy to begin his commute and give me a shout. Most of what I was monitoring was S9 of silence because someone who'd been jamming the repeater for about 45 minutes was still at it when I tuned in. This person has been hunted, recorded, you name it for months... always the same sound effects and all the rest.

Well... I'm driving along when I just make out the sound of a telephone ringing... like it's down the hall from his shack or something, when clear as could be, I heard the jammer pick up a phone in his shack (ringer disabled, I guess) and answer, saying:

Hello? (pause) Oh, hi, how are you... UH-OH!... CRAP!!!

as he suddenly remembered he was STILL ON THE AIR and killed his transmission!!! Heee-heeeeee!
He had locked his PTT and forgotten about it when the phone rang!

The best part is that about a dozen of us were monitoring and recognized his voice right off!! It's like he has had a split personality. He's always been a gruff but fairly decent old guy when he ID's. A definite presence on the frequency, a regular player. Now we find out it's been him doing the jamming all along. He's never going to live it down and I'm so busy laughing I don't care if the tape recording we got ever accomplishes anything. I'm not even going to tarnish his callsign here. It's not worth the hatred somebody like him could unleash. He'll get his everytime he keys up anywhere anybody knows him. We were all over him like a ton of bricks! He'll have to get an unlisted phone number and maybe even move out of town there's so much contempt for him. What a waste of good equipment!

>using armature wire and magnet wire which is very fine. Will this be
>strong enough not to stretch (I believe it will) or break?
>

As an apartment-dwelling California teenager, I used #28 coated wire. It would break in heavy winds and I would have to sneak out at night to (re)string it up. I also had a really good transmatch to tune it. The antenna actually was in the shape of a triangle, strung between two apartment buildings. It held up well enough to satisfy me. I used some small pieces of wood as insulators; were I to do it again, I might get some lucite rod or other nonconducting tensile-strong clear plastic.

>What about birds?

I don't recall birds hitting the wire. My wire was not in a likely bird flight path, though.

An _Important_ message to all who have read this thread so far.
I have an ongoing problem with my call plates and the computer system here in California.

Time after time, _most_ Police agencies including the C.H.P. cannot access your plate through the computer! This happens even with D.M.V. people on the phone as well.

One possible reason is that _most_ if not all parties involved DO NOT know that they have to enter 'H' for the 'type' of plate in order to make the computer work, even then it is impossible sometimes with the new computer system here in California that has 'major' bugs in it.

It has been a _major_ problem for me, as I can't obtain a city parking permit as I don't exist etc. (in the D.M.V. computer that is). I wonder if others have had this problem. I have even wondered if I should go back to just being a number again :-)

>want to spend on a radio that old (unless your starting a Moto musuem :))

Yep, I picked up an HT220 at the big Hosstraders flea market last year for $10.
462 MHz, PL, the battery was good, and a friend had manuals already, but I
found that re-crystalling the radio would have cost me about $50, so I sold it
for $10...
These would be great radios for $10, but the $100 or so you'd spend get a dead
one on the air isn't really worth it, especially if it's a one-channel radio.

Mike,

The only stations you really should QSL is those who
sent you cards. Apart from this, you are free to QSL
any station you like, and contacts in contests often
are interesting contacts you may want a QSL for some
purpose or another.

Only problem is to find the proper route, because he
might not be too keen on spending his time on explaining.

There are QSL servers on Internet, in the packet cluster
or you find the info in ther Radcom....

DIGEST OF ARTICLES - QST February, 1995

Following are digests of articles printed in the February, 1995 issue of QST. Such digests are being prepared for each issue of QST, and posted periodically.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:Radio Observations of Two Solar Eclipses
Author>Emerson, Darrel - AA7FV/G3SYS
Source>QST Feb 95, pp. 21-26
Abstract>Observations of solar eclipses using only amateur radio

equipment.

Digest>Dr. Emerson is a professional radio astronomer working at the National Radio Astronomy Observatory at Kitt Peak, Arizona. He makes his home in Tucson.

His home amateur station, AA7FV, is self-described as a "rather poor Oscar-13 satellite system". Using only this amateur gear, he monitored two solar eclipses; those in July, 1991 and May, 1994. In 1991, he confined his reception to 146-MHz., whereas in 1994, he recorded data on both 146- and 436-MHz.

His antenna setup is a 10-element Yagi on 146- and a 15-element Yagi on 436-MHz. Low-noise preamplifiers are used on both bands. For the measurements, he used his regular station transceiver, a Yaesu FT-102, fed by a Yaesu FTV-107 transverter. The only special equipment that he built for recording the sun's noise output was a simple full-wave rectifier to convert the audio output of the transceiver to a d.c. voltage that could be recorded on a Heath chart recorder.

During both eclipses, he made no attempt to follow the sun across the sky. He aimed the antennas at a spot in the sky where the sun would be at mid-eclipse, and left it there.

Neither eclipse was total at Tucson. AA7FV recorded the received signal for about an hour before the moon began to cover the sun, throughout the eclipse which lasted about three hours, and for another hour after it was over. The beamwidth of the two antennas are about 30-degrees and 40-degrees, respectively. The sun appears to move through the heavens at a rate of 15-degrees per hour, so during the six hour duration of his record, the sun moved gradually into, through, and out of the main antenna lobe. Around the time of maximum occultation, it was moving through the center of the lobe.

The author states that it is very easy to detect the noise radiated by the sun. It is always fairly strong, but its amplitude is subject to wide swings ranging more than 10:1. Over a period of a few hours, it can usually be considered constant.

At the time of the 1991 eclipse, sunspot activity was down only slightly from the peak of Cycle 22, at a count of 142; but by 1994, it was only 27 on the day of the eclipse. Consequently, the records made during the two eclipses are very nearly representative of conditions at the two extremes of the sunspot cycle.

Included in the article is an illustration of the record made during the 1991 eclipse. The record is characterized by random variations of the character of typical noise, studded by a number of extreme peaks, representing noise bursts. During the mid-portion of the eclipse, the received noise rapidly dropped to a very low level for a period of about an hour as the moon passed in front of the sun. But the moon did not cover the entire face, therefore it is apparent that the noise was not radiated from all over the face; rather, the majority of the noise came

from one single tiny area.

Recognizing that the edge of the moon acts as a very effective shield blocking the radio beam, Dr. Emerson noted the precise time when the noise signal dropped to a low value, and the later time when it rose again to a very high level. From those two times, knowing the precise positions of the sun and moon at both instants, he drew a simple diagram of three circles, one representing the sun, the other two the moon at its relative positions when the noise first was blocked out and when it returned to a high level. The intersection of the two moon circles defined the precise spot on the orb of the sun from which the noise was emanating. This simple approach allowed him to calculate the location of the radiating spot to a precision of better than .01-degree, using an antenna with a beamwidth of 30-degrees!

The results of the measurements made during the eclipse of 1994 were much less dramatic because of the quieter conditions on the sun. No discrete sources of radiation were detected. Actually, the noise level at 146-MHz. was so low, and the man-made interference so high, that the record from that band was practically unusable. At 435.6-MHz., however, the author obtained usable measurements. In fact, he was able to use his data to calculate the apparent temperature of the sun's surface. The answer he obtained was nearly the same as that made by observatories using equipment costing thousands of times more than his home amateur station.

Title>TA2:Is This Ewe For You?
Author>Koontz, Floyd - WA2WVL
Source>QST Feb 95, pp. 31-33
Abstract>Describes high-performance directional receiving antennas of small size for low frequency bands.

Digest>In this article, WA2WVL describes a directional receiving antenna for the low bands that provides remarkable performance, yet small size. In its most basic form, for operating on 80-meters, it is simply a continuous piece of wire strung between two ten-foot (3-m.) high masts spaced from 15- to 60-feet (4.6- to 18.3-m.) apart. The antenna is fed by coax cable through a 3:1 step-up transformer (9:1 impedance ratio) connected at the base of one of the poles, with the transformer secondary connected between the wire and a ground stake. The wire extends to the top of that mast, across to the top of the other, and down that pole to the base. A terminating resistor is connected from the end of the wire to a second ground stake.

A schematic drawing of the antenna makes it appear to be identical to a short Beverage wave antenna, but the principle of operation is entirely different. The Ewe antenna is actually a pair of phased monopoles, and the horizontal wire between the poles is simply the feedline that establishes the phase difference between the two elements. A computer analysis shows that there is a phase-shift of about 45-degrees between the centers of the two monopoles. The radiation pattern is a pure

cardioid with a deep null in the direction toward the termination resistor. The main lobe is slightly broader than 180-degrees wide in the direction of the feed-point.

Tables of values are included to illustrate the effect of varying the spacing between the masts. Calculated for a vertical radiation angle of 30-degrees, the front-to-back ratio is 17.9-dB. when using a spacing of 15-feet (4.6-m.) between poles. The F/B ratio peaks at 34.8-dB. with a separation of 25-feet (7.6-m.) and drops back to 20.1-dB. with 35-foot (10.7-m.) separation. The termination resistance must change slightly for different separation distances: 15-feet requires 650-ohms, 25-feet 850-ohms, and 35-feet 900-ohms. The forward gain increases (becomes less negative) with the greater separation: it is -21.4 dBi. at 15-foot separation, -18.0-dBi. at 25-feet, and -15.9-dBi. at 35-feet. The author uses a low-noise amplifier with 11-dB. gain at the antenna to compensate for the reduced signal level.

A similar antenna can be used on 160-meters, with a change in the termination resistance. Still with 10-foot poles, using 30-foot (9.1-m) separation the F/B ratio is 23.3 dB., gain -27.2-dBi., and termination resistance 1000-ohms. F/B ratio peaks at 40-foot (12.1-m.) separation: 35.2-dBi.; forward gain is -25.1-dBi., and the end resistor is 1060-ohms. With 60-foot (18.3-m.) separation, F/B ratio drops to 18.2, gain rises to -22.1, and the termination resistance must be 1220-ohms.

Other dimensions can be used and will produce similar performance. The author illustrates a compromise 160/80-meter ewe, using 15-foot poles 38-feet (11.6-m.) apart. It requires a terminating resistor of 840-ohms. Gain at 1.8-MHz. was calculated as -22 dBi., and at 4.0-MHz., -12.3 dBi.

Performance can be augmented by building an array of two such antennas fed as either an in-line array or broadside. The in-line array gives approximately the same forward pattern, but substantially reduced radiation from the back side. Such an array can be made of two ewes, each of which has a separation of 27-feet (8.2-m.) between poles, and the front pole of the rear antenna spaced 23-feet (7-m.) behind the rear pole of the front antenna. They should be driven with equal currents at 135-degree phasing.

The broadside array, with the two antennas side-by-side and fed in phase, produces a beam much narrower in the main lobe. At 80-meters, two ewe-antennas spaced 150-feet (45.7-m.) apart produce a main lobe of only about 70-degrees between half-power points, contrasted with more than 180-degrees for the single antenna.

Title>TA3:Interpreting QST's New Propagation Charts for Low Power and Low Antennas
Author>Hall, Jerry - K1TD
Source>QST Feb 95, pp. 34-36
Abstract>Explains how to interpret propagation charts for use by modest ham stations.

Digest>In QST Oct 94, a new format was announced for the propagation charts shown each month in the "How's DX?" column. K1TD's article in that issue thoroughly explained how those charts are calculated and what they mean. Each chart contains plots of the Highest Possible Frequency (HPF), Most Usable Frequency (MUF), and the Lowest Usable Frequency (LUF). As was explained, the HPF is expected on about 10-percent of the days of each month and the MUF on 50-percent of the days. Those two graphs are plotted as solid lines. The LUF, on the other hand, is a dashed line and represents a fundamentally different kind of variable.

The HPF and the MUF indicate the highest frequencies that can be expected to refract from the ionosphere and return to earth and are unaffected by the emitted power, antenna gain, or any other factor under control of the operator. The LUF, on the other hand, is a measure of the absorption of the radiated power by the atmosphere and so is very much affected by the "oomph" of the signal, i.e. power, antenna gain, antenna height, etc.

The monthly charts are all calculated for amateur "super stations", running the legal limit of power and using large antennas on high towers. Many hams have questioned why the graphs are prepared in that way and whether it would not be more useful to prepare similar charts based on typical ham stations.

In this article, K1TD includes charts are prepared for both types of stations. He goes on to explain how any ham can use the "super station" charts, by showing the differences between his examples.

The fundamental point is that the HPF and MUF curves are unchanged in both cases, independent of station "oomph". Using those two curves only, every ham can see what is physically possible, ignoring limitations of equipment, site, and the like. By experience, hams with much more modest stations will learn how much they must allow for the reduced "oomph" of their own stations. They will find it impossible to make contacts at the low frequencies near the LUF and will have to operate at higher frequencies, closer to the MUF. For example, if a DX station is known to be using 20- and 40-meters and 20-meters is not open, the "super station" may be able to make the contact on 40-meters, whereas the modest station may have to wait for 20-meters to reopen.

In summary, the old adage that it is always best to use frequencies slightly below the MUF is the best guide for everyone, whether one is running QRP or a "Big Gun".

PRODUCT REVIEW (PR)

Editor, QST

Title>PR1:Yaesu FT-900AT MF/HF Transceiver
Author>Swanson, Glenn - KB1GW
Source>QST Feb 95, pp. 59-63

Abstract>Review of a very small, mid-level MF/HF transceiver designed primarily for mobile use. Its unusual feature is a removable front panel that can be mounted remotely.

Digest>The FT-900AT is Yaesu's newest mid-level MF/HF transceiver. It is designed to be of minimum size, for use either in a vehicle or a fixed station. Its most notable feature is its removable front panel that can be operated at the end of a cable, some 24-feet long (7.3-m.), that is supplied with the manufacturer's Remote Mounting Kit. This allows the rig to be mounted inside the trunk of an automobile, for example, with the front panel mounted on the dashboard. In that configuration, when the car is parked it is easy for the driver to remove the panel and slip it into their pocket.

Although the transceiver is only about 10-inches (25-cm.) square and less than 4-inches (10-cm.) high, it is a full-featured rig. Its receiver tunes from 100-KHz. to 30-MHz. and its transmitter covers the amateur bands from 160- through 10-meters, using SSB, AM, FM, and CW. Output power is adjustable from 2- to 100-watts on all bands, except for AM operation, which is limited to 25-watts carrier output. The rig has a built-in electronic keyer and a narrow CW i.f. filter is available. The accompanying microphone is designed for mobile use and has built-in buttons for scanning control: UP, DOWN and FAST.

The ARRL lab tests showed excellent receiver performance. Noise floor measured between -120- to -129-dBm. The blocking dynamic range with 500-Hz. i.f. filter in use measures from 117- to 124-dB. The third-order IMD dynamic range, with the same filter, measures from 82- to 99-dB. The variations between the measurements as stated are due their having been made at various frequencies and with the preamp on and off.

In operation, the reviewer found the rig easy to use and the audio quality was reported to be excellent on SSB. On CW, the rig offers a feature that will warm the hearts of old brass-pounders. It allows the operators to select the sideband they are listening to! That delightful feature, that used to be inherent in all receivers in vacuum-tube days, was largely abandoned years ago when solid-state transceivers took over.

One complaint that the reviewer registered has to do with the filter selection process. He successfully operated the rig in digital modes, but it was a "daunting task" to set it up to use the narrow CW i.f. filter in AFSK mode.

The operating manual for the FT-900 was found to be "outstanding", highly readable, well-indexed, and thorough. In general, the reviewer found the transceiver to be an excellent rig for either mobile or fixed-station use.

The manufacturer's list price for the FT-900AT (including built-in automatic antenna tuner) is $1699. An optional narrow CW filter adds $170.

Assoc. Technical Editor

Title>TC1:The Lazy-V Array - An Antenna to Consider
Author>Leo, Bob - W7LR
Source>QST Feb 95, pp. 67-68
Abstract>A switchable beam antenna for 40-meters, providing respectable gain and good F/B ratio, that requires only small land area.

Digest>This letter, accompanied by a photograph and a drawing, describes an antenna array built around a 70-foot high aluminum mast made of 4-inch diameter aluminum irrigation pipe. The antenna itself is made up of four independent wire antennas, one on each of the four sides of the mast. Each wire is a half-wave dipole, 33-feet (10.1-m.) each side of the center balun.

Both ends of each wire is supported by a length of nylon rope attached to the mast, one at the top and the other at the bottom. The center balun is pulled horizontally away from the mast until the two legs form approximately a right angle, forming a "lazy-V". Each of the four "lazy-Vs" is fed by a separate feedline made of 62-feet (18.9-m.) of RG-213 coax cable.

A 1:1 balun is at the center of each dipole and the feedline runs horizontally to a pulley mounted half-way up the mast, over the pulley and down the mast to a switchbox at ground level. The box contains four relays for switching directions. The relays are arranged to short the ends of the unused feedlines, which then become shorted stubs that cause their respective dipoles to act as reflectors.

The overall array displays approximately 5-dB. of gain in the favored direction, and near 20-dB. front-to-back ratio! Clearly, the unused antennas, and also the mast, combine to form a reflector that provides excellent directivity.

Title>TC2:ALE - The Coming of Automatic Link Establishment
Author>Menold, Ronald E. - AD4TB
Source>QST Feb 95, pp. 68-69
Abstract>A network protocol that allows instant communication among all members of a geographically scattered radio network.

Digest>Automatic link establishment (ALE) is a protocol that allows every station in a multi-station HF network to be able at all times to establish instant communication with any one or more of the others. It requires that the network be authorized to operate on a number of frequencies spread over the MF/HF spectrum.

The system works because each station is continuously either listening to, or transmitting on, all channels in sequence. It keeps note in its memory of which channel(s) is open to each of the other stations. Consequently, when traffic needs to be sent to any other station, the transmitting station already "knows" which channel is open.

So far, ALE systems have been established mainly by government agencies. Clearly, many other types of organizations will soon find such systems effective for either their primary communications links, or as backup for other types of telecommunications channels. Someday, there may be amateur applications for similar systems.

Sr. Asst. Technical Editor

Title>HK1:Adding Transmit Offset Tuning to the Uniden HR-2600 Transceiver
Author>Oros, Edward - AC3L
Source>QST Feb 95, p. 65
Abstract>Modify the Uniden HR-2600 to provide continuously variable transmit frequency adjustment.

Digest>The Uniden HR-2600 is a 10-meter transceiver designed for mobile use. It is quite versatile, can operate in SSB, FM, AM and CW modes, and can also operate with repeater splits. Its usefulness for certain modes, such as digital modes, is limited by its method of tuning. Its frequency can be adjusted only in steps of 50-Hz. There is an RIT function that allows the receiver section to be tuned precisely, but that does not apply to the transmit frequency.

AC3L discovered that, with a relatively simple modification, he can make the transmitter frequency track with the receiver, thereby eliminating the problem.

His letter describes, in complete detail, how it is done. The description is written in narrative form, not using schematic diagrams. Instead, it explains to the reader how to lay the rig on its side, how to find a small, square, green PC board mounted vertically to the radio's inside front; where to find two white wires leading from so-and-so a place, and like instructions. He even identifies certain components with descriptions like: "white, with crosses on their tops".

His instructions are meticulous and seemingly complete. Following them, no careful ham should encounter much difficulty in duplicating the modification IF every HR-2600 that ever came off the assembly line is made precisely the same as the author's model. One can only hope that there were no "Engineering Change Orders" made during the production run in the Uniden factory!

Title>HK2:Feeding a Quad With Open-Wire Line Instead of Coax
Author>Robb, Curtis - NT5E
Source>QST Feb 95, pp. 65-66
Abstract>Feeding a multiband quad antenna with a single, open-wire transmission line.

Digest>NT5E put up a 4-band 2-element quad, for 20-, 17-, 15-, and 10-meters, located 325-feet from his shack. To minimize transmission-line losses, he fed the antenna with 450-ohm open-wire line. He connected all four of the driven elements in parallel to be fed by the single transmission line and used an antenna tuner.

The operating results were actually better than he had hoped. Not only could he tune the antenna to 1:1 SWR over full band width of the four design bands, but also, he found that he could load it up on three additional bands: 40-, 30- and 12-meters. On the three extra bands, the antenna performs approximately as a dipole, but with a noticeable front-to-back ratio.

Title>HK3:Stalking the Elusive Touch-Controlled Lamp
Author>McCook, Jim - W6YA
Source>QST Feb 95, p. 66
Abstract>Finding the source of an intractable interfering radio noise.

Digest>This letter describes the difficulty the author had in tracking down a very intense 60-Hz. noise with a bandwidth of about 30-KHz. that drifted around on the 40-meter CW band. After searching with a portable HF radio all around the neighborhood many times, he finally found a bundle of telephone wires leading down a power pole where the offending noise was not only detectable, but very strong, within 2- or 3-feet of the bundle.

A telephone-company trouble shooter was very cooperative and allowed W6YA to locate on which telephone line the noise was apparently being carried. When he went to that house, the homeowner was likewise very cooperative and they soon found a touch-controlled light switch on the stove in the kitchen of the house. He does not explain, and probably does not know, how the noise from a light switch got onto the telephone line. Nevertheless it did and was propagated on it, but was not detectable on the power line!

Title>HK4:An IC Amplifier for the ARRL Handbook RX Noise Bridge
Author>Shelhamer, Mark - WA3YNO
Source>QST Feb 95, p. 66
Abstract>Construction details of an improved and simplified amplifier for the null-detection circuit of an RX noise bridge.

Digest>All recent editions of the ARRL Handbook has contained a description of an RX noise bridge that uses a 2-transistor amplifier in its null-detection circuit. WA3YNO designed and built a simplified and improved amplifier using a single IC circuit. A schematic diagram is

included with his letter.

Unfortunately, the IC circuit that he used, an LM-703, is now obsolete. The editor added a different set of pin numbers on the diagram that a builder could use in substituting either a replacement chip from NTE/ECG or National Semiconductor's LM-703M.

NEW HAM COMPANION (NHC)

Title>NHC1:Baby in the Shack!
Author>Danzer, Paul - N1II
Source>QST Feb 95, pp. 48-50
Abstract>"Baby-proof" a hamshack so that the child cannot be hurt by the equipment, or vice versa!

Digest>Every ham who is a parent or grandparent of small children, or for other reasons may find small children in or near the hamshack, needs to give thought to "baby-proofing" the area. First and foremost, baby's safety must be assured! Secondarily, little fingers and hands (not to mention feet) have great propensity for getting into places where they do not belong. Make extra sure that no little hand can flip a switch or twist a dial that would result in burning up your high-power amplifier tube, for example.

Safety precautions are necessary not only in the shack itself, but also out on the "antenna farm". Towers make marvelous "jungle gyms", in the eyes of children of all ages. Make sure your towers are unclimbable! Sheets of plywood attached to, and covering up, the lower 6- or 8-feet of the tower can make it impossible for even a teenage boy to climb.

In general, try to imagine all the "worst cases" that might occur and take whatever precautions are necessary to prevent them.

Title>NHC2:40 Meters, 40 Dollars
Author>Bowles, Chester S. - AA1EX
Source>QST Feb 95, pp. 51, 57
Abstract>Make a miniature 40-meter dipole from 2 mobile whip antennas.

Digest>AA1EX describes in this short article how he made a small size 40-meter dipole out of two 7-foot mobile whip antennas designed to resonate as monopoles on that band. He mounted them base-to-base on a piece of steel angle, insulating the bottoms from the support using the plastic spacers and washers supplied for mounting the whips on vehicles. He fed them using coax with the center conductor attached to one whip, and the shield to the other. The result was a dipole 14-feet long that resonated very well on 40-meters and covered the entire band with an SWR that never exceeded 1.5:1.

At the feed point, he formed the feed line into a coax balun by winding the last few feet into a 6-turn coil.

He mounted the assembly on the same mast below his beam antenna and uses it as a rotary dipole. It is very helpful in reducing local interference. He can rotate it to null out most local interference.

For transmitting, he finds his signals to be good, never more than one or two S-units below that from his full-size 80-meter dipole at 45-foot altitude.

The whip antenna is so lightweight that it could easily be rotated using a TV rotator. Mr. Bowles also points out that similar whip antennas are available for all the other MF/HF bands and similar antennas could be built for any of them.

Title>NHC3:The Novice Field Day Station Roundup
Author>Polkinghorn, Michael - KD6PUD
Source>QST Feb 95, p. 52
Abstract>Operating a novice station on Field Day.

Digest>KD6PUD and several other novices were invited to operate a novice station as part of the W6RHC Field Day operation. They did so and had a great time, which is described in this article.

Title>NHC4:Harkers Island on the Air!
Author>Capon, Robert S. - WA3ULH
Source>QST Feb 95, pp. 53-55
Abstract>How a North Carolina island was put on the air as an IOTA event.

Digest>This article describes how a group of five amateurs put Harkers Island, North Carolina, on the air as an IOTA (Islands on the Air) event. IOTA is an award program established and maintained by the Radio Society of Great Britain (RSGB). It is somewhat similar to the DX Century Club (DXCC) in that it presents award to amateurs who contact more than 100 islands throughout the world.

To receive credit, the specific island must be listed in the IOTA directory which is published yearly by the RSGB. It already includes many hundreds of islands, and more are being added continually. Islands are accepted for listing if (1) they are shown on a map with a scale of at least 1,000,000:1, and, (2) it lies within one kilometer of the mainland, it must be separated from it at all points by at least 200-meters of sea at low tide.

Harkers Island is off the Atlantic coast of North Carolina, close to the town of Beauport. It is connected to the mainland by a causeway and has a permanent population of 1600 people.

The group rented a cottage on the island and set up their gear, including antennas, on a Friday evening. They operated until Sunday evening and made approximately 1000 contacts, working all continents and 48 DXCC countries!

Title>NHC5:The Doctor is IN
Author>Various
Source>QST Feb 95, pp. 56-57
Abstract>Questions and answers of primary interest to newcomers.

Digest>Questions and answers this month include what to do about the new postal rates with the QSL Bureau; the meaning of "Readability" in the RST system; how low is too low for an 80-meter dipole; how to improve reception of signals from aircraft; how to orient a beam antenna with true north; whether a ham with technician-class license can use a gateway from VHF packet to 20-meters; among others.

Title>An AGC Audio Preamp for All Seasons
Author>Miller, Dave - NZ9E
Source>QST Mar 95, p. 58
Abstract>Construction details of an automatic gain-controlled audio preamplifier

Digest>There are a number of applications of audio gear that require a relatively steady input signal level. For example, effective operation of a digital signal processor (DSP) requires that the audio volume be set so that the received signal strength approaches, but does not reach, the upper limit where saturation occurs. But in QSOs, especially in round-tables, the received signal levels may vary drastically. To avoid the necessity of continuously adjusting the audio gain in such situations, NZ9E designed and built a simple audio preamplifier with automatic gain control (AGC).

In this article, he provides a circuit diagram, parts list, and full construction details. It uses a common 741 op amp and a few other parts, built on a very small PC board. The author uses it to provide the input to a W9GR DSP unit and reports that it very effectively handles wide swings in signal levels.

An etched and drilled PC board is available from FAR Circuits, 18N640 Field Court, Dundee, IL 60118 for $5.50, including domestic shipping.

RADIO TIPS (RT)

Title>RT1:Those Mysterious "Numbers Stations"
Author>Phillips, Curt - KD4YU
Source>QST Feb 95, p. 50
Abstract>Spy stations on the air.

Digest>Ever since the 1960's, there have been quite a few unidentified stations scattered across the spectrum from 2-MHz. to about 26-MHz. that broadcast seemingly random numbers in both CW and voice transmissions. Various of them are heard speaking Spanish, Russian, German, and English. They never identify themselves.

The identity and purpose of these stations has never been officially announced, but unofficially it is now understood that these are spy transmissions to communicate with operatives in countries throughout the world. No one can explain why the activity of such stations has not seemed to decrease since the end of the Cold War!

Title>RT2:What is TAPR?
Author>Keith, Larry - KQ4BY
Source>QST Feb 95, p. 55
Abstract>Describing Tucson Amateur Packet Radio and its activities.

Digest>TAPR stands for Tucson Amateur Packet Radio. It is a non-profit organization, supported by the members, made up of people interested in research and development of packet equipment and in digital communications, in general. The organization and its first product, a TNC, were created in 1982 by six people, members of the IEEE Computer Society. The organization now has more than 1000 members. It continues to develop kits for the amateur radio world and to disseminate technical information.

Anyone interested in the design aspects of digital gear is invited to join the organization by sending $15 to Tucson Amateur Packet Radio, 8987-309 East Tanque Verde Road, No. 337, Tucson, Arizona 85749-9399. The membership fee for Canada and Mexico is $18 (US), and outside North America $25. Members receive the Packet Status Register newsletters which, the author states: "contain a quarterly torrent of timeless technical information".

Anyone with Internet access can obtain TAPR information by sending a message to: listserv@tapr.org containing the word "request" in the subject line and the following lines in the body of the message:
help
index -all
get taprinfo.txt

By return E-Mail, the inquirer will receive full information about TAPR and its activities.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Remembering Hugo Gernsback
Author>McElroy, Gil - VE1PKD
Source>QST Feb 95, pp. 37-39
Abstract>In memory of a pioneering publisher of radio magazines and books.

Digest>From the earliest days of radio until the 1960's, Hugo Gernsback was a name known to everyone interested in radio in the United States, if not throughout the world, as a publisher of books and magazines on radio, and on many other subjects, including science fiction.

Gernsback was born in Luxembourg in 1884 and came to America in 1904. In 1906, he opened the first retail store in America that sold radio apparatus directly to the public. To promote his retail business, he published a catalog. His publishing business grew from that beginning.

In 1908, he began to publish MODERN ELECTRICS magazine and, the following year, founded the Wireless Association of America. He promoted the organization through his magazine, never hesitating also to promote himself and his purported accomplishments. Soon he was claiming a membership of 10,000 in his organization.

By 1912, radio had grown without regulation. Responsible people from all sides, including especially the U.S. Navy, were demanding government action to regulate the use of the airwaves to protect vital communications links, especially with ships at sea. Several bills were introduced in Congress that would have essentially eliminated amateur radio experimentation.

Gernsback, with his magazine and organization, played a vital role in organizing opposition to the more egregious aspects of some of the proposed regulations and guaranteeing the access of amateurs to some of the less-desirable parts of the radio spectrum. As a result, the First Radio Act required amateur activity to be confined to wavelengths shorter than 200-meters, which were considered useless for commercial purposes. A corollary to that proscription was that it established the legal right for amateur activities on "short waves".

In 1914, the ARRL was founded and the Wireless Association of America withered, but Gernsback's publishing empire flourished. Among his magazines was the first one devoted to science fiction. Today, his name is honored by the yearly award for the best science fiction, which is named "Hugo" in recognition of his status as the founder of science fiction publication.

Gernsback died in 1967.

Title>GI2:A Van for All Reasons
Author>Reinhardt, Jeff - KM6II
Source>QST Feb 95, p. 40-42
Abstract>Describes a van that was modified for use as a mobile radio center.

Digest>This the story of a '75 Chevrolet Step-Van that was purchased in 1985 by Bob Burns - N6ZH and converted to use as a mobile ham radio station for emergency communications and Field Day activities. He equipped it with radios, computers, packet facilities, and power generators. Operated by groups of hams under his leadership, it participated in many emergency drills, community events, and worked with the Los Angeles Police Department during the Pope's visit to L.A.

Later the van changed hands and was eventually donated to the Los Angeles County Sheriff's Disaster Communications Service. Since then, it has been kept busy during floods, fires, landslides, as well as

during foot races, concerts, and walk-a-thons.

Title>GI3:A Ham's Tour of London
Author>Columbus, Jack - VE1XT
Source>QST Feb 95, p. 43
Abstract>A guide to places of interest to amateurs in London, England.

Digest>VE1XT has written a one-page travel guide describing several of the places and institutions in London, England that would be of interest to visiting radio amateurs. Included are the Science Museum at South Kensington; the old Royal Observatory at Greenwich, where the prime meridian (0-degrees longitude) is located; and the headquarters of the Radio Society of Great Britain (RSGB), which includes the editorial offices of RADIO COMMUNICATIONS (RADCOM) and the club station, GB3RS.

Title>GI4:The Kid's Radio Station
Author>Bykov, Vladimir - UA4WHX/AC4LN
Source>QST Feb 95, p. 44
Abstract>A Russian ham describes activities in Russia, before and after the demise of the U.S.S.R.

Digest>The author, Vladimir Bykov, is a young Russian who describes his experiences as a radio amateur in the Soviet Union in the 1980s and relates how conditions have changed since then. He lives in the city of Izhevsk, Russia and, at the age of 13, joined the radio club that was supported by the city government. He also describes the large Youth Leisure Center where the club is located. It was built by the government to house all kinds of activities for ages 7 through 18. As he describes it, it is somewhat like a very large YMCA/YWCA providing a great many specialized activities of all kinds "from ballet to theater to biology clubs".

The radio equipment that the club originally had available was quite limited, but he and a number of his friends became licensed operators and very enthusiastic hams.

After attending college and serving for two years in the military, he returned to Izhevsk and obtained a job at the leisure center as a member of the staff. One of his first actions was to reorganize the radio club, which had disbanded.

In 1991, UA4WHX visited the USA and obtained a U.S. license, KD4DZH, later AC4LN. The many friends that he made in Kentucky and Alabama during his visit raised money to buy a second-hand transceiver that he took back to Russia when he returned. The availability of a modern transceiver was a great thrill to all the members, and they thoroughly enjoyed working DX during the good propagation conditions of that year.

The following year he again visited this country and, this time, was able to contact his friends in Russia by radio. He made it a point to record the sounds of the Russian radio signal so that he could play

it back for them after he returned, which they thoroughly enjoyed hearing.

Title>GI5:The Man From HI-Manuals
Author>O'Brien, Mike - N0NLQ
Source>QST Feb 95, pp. 45-46
Abstract>About Alan McMillan - W0JJK who supplies copies of manuals for obsolete radio equipment.

Digest>This article describes the activities of Alan McMillan - W0JJK, who is "dba" (doing business as) HI-Manuals. He was formerly manager of Myerson's World Radio Labs that operated a mail order electronics supply house. It also manufactured the Globe line of ham equipment from the 1940s through the '60s.

When the Myersons decided to withdraw from the ham business, Mr. McMillan bought the radio assets of the company. Among them was a collection of manuals of all kinds of amateur gear from those earlier years.

He operated a ham store until the 1980s and became known as a source for copies of the early manuals. Due to a deterioration of his health in the early '80s, he closed his radio business but continued to supply manuals, operating from his home. Ever since, he has had a thriving and continuously growing business supplying manuals for old equipment.

Anyone who wants copies of technical or operating manuals for equipment no longer manufactured will probably find it available from HI-Manuals. One can obtain a copy of the latest catalog listing the items available, and their prices, by sending $2 ($3 if outside the USA) to HI-Manuals, PO Box 802, Council Bluffs, IA, 51502.

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

For your interest ...
==========
1. Australia is the world's heaviest per capita user of
Internet, the international computer network.
2. Australia has the second highest number of personal
computers per capita in the world, after the United States.
3. Australia has the second highest level of computing power
per capita in the world, after the United States.
4. Australia is the eighth largest user of personal
computers worldwide.
5. Australia's information technology market is worth more
than 10 billion dollars Australian per year, second only to
Japan in the Asia-Pacific region.
6. Australia's information technology industry is bigger
than Korea's and nine times the size of Singapore's and Hong
Kong's.
7. Australia's business employs more than 2.7 million
personal computers - 48 per cent are on local area networks.
8. Australia's information technology companies export almost
2.5 billion dollars Australian of products a year.

DX BULLETIN 12 ARLD012
FROM ARRL HEADQUARTERS
NEWINGTON CT MARCH 16, 1995
TO ALL RADIO AMATEURS

ARLD012 DX NEWS

THIS WEEK'S BULLETIN WAS MADE POSSIBLE WITH INFORMATION PROVIDED BY TEDD, KB8NW, THE OPDX BULLETIN, ANTOINE, F6FNU, THE YANKEE CLIPPER CONTEST CLUB PACKETCLUSTER NETWORK AND THE CONTEST CORRAL COLUMN FROM THE PAGES OF QST MAGAZINE. THANKS TO ALL.

TUNISIA. 3V8BB HAS SUBMITTED PROPER DOCUMENTATION. CARDS WILL NOW BE ACCEPTED FOR DXCC CREDIT.

ZAIRE. PETER, ON6TT, CONTINUES TO BE ACTIVE AS 9Q5TT. HE WAS RECENTLY OPERATING RTTY ON 20 METERS STARTING AT AROUND 2030Z.

BAHRAIN. THE DX NEWS LETTER (DXNL) REPORTS THAT ADMIRAL SCOTTY REDD OF THE US NAVY, KA SIGNING A92Q. LISTEN FOR HIS 40 METER CW. QSL VIA BOX 116, MANAMA, BAHRAIN.

MALTA. BIRGIT, DL7VTZ, AND HOLGER, DL7VTM, WILL BE ON GOZO ISLAND FROM MARCH 24 TO APRIL 7 SIGNING 9H1TZ AND 9H1TY, RESPECTIVELY. YOU MAY REMEMBER THEIR RECENT DXP AS TN2M ES TN4U FROM THE CONGO. PLANS ARE TO PARTICIPATE IN THE CQWW WPX CONTEST ON THE 25TH AND 26TH. ACTIVITY WILL BE ON ALL BANDS WITH 100 WATTS AND WIRE ANTENNAS. QSL VIA DL7VRO.

BOUVET ISLAND. UA9OBA WILL BE DOING SOME EXTENSIVE TRAVELING THROUGHOUT THE ANTARCTIC AND ARCTIC REGIONS BEGINNING IN JUNE. ALONG THE WAY HE PLANS TO ACTIVATE A FEW NEW IOTAS, NAMELY NANSKIAN AND SCOTT ISLANDS. AT THE END OF THIS LONG TRIP SOMETIME IN LATE OCTOBER OR NOVEMBER HE HOPES TO OPERATE FROM BOUVET, AN-002.

SRI LANKA. WILLEM, ON6TZ, AND GERARD, ON4ASQ, WILL BE ACTIVE UNTIL APRIL 1.

ISRAEL. RIKI, 4X IS ACTIVE ON 160 METERS 20 MINUTES BEFORE AND AFTER HIS SUNSET. HE CAN USUALLY BE FOUND ON OR NEAR 1830 KHZ LISTENING UP. HE NEEDS ID, ND, NV, OR AND UT TO COMPLETE HIS WAS.

CONGO. YL OP HAZEL WAS HEARD LAST WEEKEND SIGNING TN7OT ON 14220 KHZ AROUND 1945Z.

KUWAIT. FAISAL, 9K2HA, REPORTS THAT AS OF MARCH 1, ALL FOREIGN AMATEURS VISITING KUWAIT MUST SIGN 9K2/THEIR HOME CALLS. PLEASE BE AWARE THAT SOME CALLS ONCE ISSUED TO FOREIGNERS ARE NOW ASSIGNED TO KUWAITI NATIONALS. FOR EXAMPLE, 9K2ZZ NOW BELONGS TO FAISAL, EX-9K2HA. QSL VIA ON6BY. AS OF MARCH 1, 9K2ZZ IS 9K2/N6BFM, 9K2ZC IS 9K2/KI0K, AND 9K2YY IS 9K2/N0YKI.

PACIFIC DXPEDITION. TOSY, JA6VZB, WAS ACTIVE FROM BELAU AS KC6VW UNTIL MARCH 17, AND FROM MICRONESIA AS V63BM MARCH 17, 18 AND 19, AND GUAM AS AH0T/KH2 MARCH 19 AND POSSIBLY LONGER. HE WILL WORK ALL BANDS USING CW, SSB AND RTTY, BUT CONCENTRATE

ON 160 METERS AND RTTY. ONLY QSL VIA THE BUREAU TO JA6BSM.

EUROPA. FR5HG SHOULD BE ACTIVE THROUGH APRIL 30 WITH CW, RTTY AND SSB. HE RUNS 500 WATTS TO A LOG PERIODIC ANTENNA. QSL VIA F6FNU.

ASCENSION ISLAND. G4RWD IS ON THE AIR AS ZD8WD UNTIL SEPTEMBER.

CARIBBEAN DXPEDITION. MARK, DL1XAQ, AND RALF, DL9XAT, WILL BE ON FROM FOUR DIFFERENT IOTAS IN THE CARIBBEAN. HERE IS THEIR SCHEDULE. FROM MARCH 25 TO 26, THE SAINT VINCENT AREA, J8, NA-109. MARCH 27 TO APRIL 1 FROM NA-025. APRIL 1 TO 4 FROM SAINT LUCIA AREA, J6, NA-108. APRIL 4 TO 8 FROM THE GUADELOUPE AREA, FG, NA-102. ACTIVITY WILL BE ON 80 THROUGH 10 METERS. QSL VIA THEIR HOME CALL SIGNS.

SAINT LUCIA. PETER, DK1RP, WILL BE ON THE AIR AS J6/DK1RP FROM APRIL 11 TO 29. HE WILL OPERATE PRIMARILY CW ON THE WARC BANDS. QSL VIA THE BUREAU.

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the Pres'nt (Col) VK2CTD @ VK2XSB, or the Secretary (Pat) VK2JPA @ VK2AAB.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or by packet to VK2JPA @ VK2AAB. Email address for the Broadcast Officer is :

patl@pitt.conmusic.su.oz.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking for-ward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

That concludes ANARTS News Bulletin 851 26/03/95.

Inserted by VK2BQS (Jim) Vice-President ANARTS.

Subject: Call sign re-allocation

Dear all;

The March/'95 issue of QST let me notice that the FCC will re-allocate call signs
(vanished ones) beginning in this coming April.

I've never heard of this plan because I live in Japan now.
Please let me know ANY recent informations regarding this action,
especially how/when to get the FCC format for this application.

Actually I have a 2x1 call sign (NT1K) which I'd like to change to
a good old 1x2 call sign like W1** or K1** withiout K at the tail
for convenient CW operations.
Do I have any chance?

Thanks in advance.

Subject: Help: with automobile RFI problem

In article <pW-4+vp.brunelli_pc@delphi.com>, <brunelli_pc@delphi.com> wrote:
)
)
)I am having the following noise problem with a mobile installation.
)Any suggestions regarding finding or eliminating the problem would
)be greatly appreciated. The car is a 1991 Isuzu Trooper and the
)rig is a Ten Tec Triton 4, and a Kenwood ts430. The antenna is an
)Outbacker Perth mounted on the spare tire carrier on the rear door.
)

)I get a s5+ static noise while the engine is running.
)It goes away when the antenna is disconnected.

Noise is entering through the antenna, not the power cord. Not unexpected.

)It does NOT change pitch or volume with load or RPM.

Then it is not likely related to ignition. Your ignition system would sound
different at different speeds.

)I have grounded the hood, engine, rear door, exhaust, and radio.
)I have not received interference from passing vehicles.
)
)It seems that the noise is related to the ignition system
)and i am checking with Isuzu regarding resistor wires or
)shielded wires.
)

I suggest you figure out where your fuel pump is. It's probably electric,
and probably in your fuel tank. This is unfortunately very near your
antenna.

Here's a test that works on some vehicles:

- with the car turned off, turn on the radio.
- turn the key to the power on position, but do NOT start
- do you hear the same S5 noise for a few seconds?

Some vehicles enable the electric fuel pump when the power is turned on,
and then if you don't start the car, will kill the pump again. The idea
is to pressurize the fuel line. Nissan vehicles exhibit the above. It's an
easy way to determine when you've tackled the fuel pump noise, as well.

I'll give Ed Hare an unabashed plug here... get the ARRL book, Radio
Frequency Interference, How To Find It and Fix It. It has a very good
section on automobile RFI.

Subject: ICOM W21AT BP-130 and LC-105

Hi All,

I was wondering if anyone knew of a mail order house that would carry the
ICOM W21AT battery pack BP-130 and the carrying case LC-105. I bought
the ICOM HT on February 11 from Lentinis in Newington, CT and they had to

backorder the BP-130. They gave me the wrong case (LC-103 which fits another model). It's now been 6 WEEKS and I haven't received either of them yet. I'd like to find someplace that has them IN STOCK so I can cancel my current order. I believe HRO has the BP-130, but noone seems to have the LC-105 in stock. Thanks in advance....

Subject: Origin of PCM?

I don't know why I didn't think of asking here sooner.

I am having a very interesting exchange in alt.video.laserdisc
about Pulse Code Modulation.

I recall its origin as a broadcast improvement over FM. The way it
was arrived at was overdrive the FM output amplifier so that it
would be heavily clipped in essence transforming the originally
frequency modlulated carrier into a variable width pulse modulated
carrier (PCM).

I was later taught in college digital electronic that PCM was a neat
wave to encode binary bit streams. I also recall learning that no matter
how the original PCM carrier was derrived (i.e. FM carrier clipping or
binary bit stream) the neat thing about PCM was that you always had the
option of either processing it in the digital or analog domain.

What I am interested in is that FM clipping is a form of flash
digitization.

I seek the wisdom of the gurus here to clarify to my thoughts and eliminate
any of my misconceptions.

I thank you in advance for your responses.

)
)Anything with a computing device needs Part 15 certification (at
)least for now, the FCC has announced plans to relax that).

I didn't read the same thing into the FCC's NPRM. What I read was
that they were going to relax the REPORTING rules such that a device
which has been tested and shown to meet Part 15 could then be sold
without waiting for the paperwork to be processed and approved by
the FCC.

There is not going to be a significant change in the part 15 emissions
of computer devices, especially any sold into Europe. Devices have to

meet much tighter standards to be sold in Europe than they do to pass
FCC part 15.

Subject: Re: Ramsey 220 MHz kit. Does it work?

My father has one. I can't recommend it. Some serious mistakes in the
manual that would cause it not to work if you weren't sharp. His currently
has a TX and RX noise problem. I don't doubt that there are others who
have had better luck. The old standard "It ain't no Heathkit" applies
here. Personally, I'd save up a bit more money and buy a commercial
Amateur 220 rig, new or used. There is no PL, or speaker either.

)>220 MHz band will spur some of this on, I'd sure like to see it.
)>It's been around for what, 12-15 years, and still somewhat in it's
)>infancy.
)
)For amateurs, ACSB has little to offer over ordinary SSB. The

)pilot tone allows automatic tuning, but hams are used to tuning
)in SSB signals, so that's not the important advantage to hams
)that it is for commercial two-way users.

ACSB versus FM would be interesting if REPEATER operation were used, in
that it would significantly reduce signal bandwidth requirements versus
FM. Now it is all well and good that hams can tune SSB, but it is not so
easy for them to tune their transmitted frequency to match a repeater's
receiver, or for the repeater's receiver to autotune to the ham's signal.

That nice pilot tone provides a way for the repeater to tune properly as
well.

) And the 2x compandoring
)has been surpassed as a way of dealing with the noise floor by DSP
)processing techniques that will work with ordinary SSB.
)
)I suspect ACSB missed it's window of opportunity about 10 years
)ago and is now a dead horse.

I suspect you're right, especially given the expense issues. It's more
likely that various spread spectrum techniques, likely with DSP at the RF
stages, will be the future technology, not ACSB.

What cable?

The counterpoise wire(s) are attached to the ground lug of the transmitter or tuner directly. Their length is normally set for the middle of a band, and +/- for length is not particularly important for function.

Sure takes the bite out of an 'RF hot' shack!

MM>Does one QSL to stations contacted in a contest?
MM>

Sure do Mike. In fact, a lot of "non-contesters" get on during contests to snag new countries or band-countries.

Be aware that many contest stations are "weekend expeditions" and the QSL route might be to a different station. For instance, a lot of "W" operators go to Caribbean islands for contests and take their QSL's at their home call location.

>
>Well let's go back to basics. SWR is defined as:
>
> SWR = (1+rho)/(1-rho)
>

<SNIP>

We're already at the basics, Todd - you stated that "High VSWR occurs as a result of impedance mismatch between the antenna system and the transceiver (or amplifier/tuner if either or both is used.)"

In turn, I replied that the match between transmitter and antenna system determines power transfer, not VSWR.

You are attempting to distract attention from your error with unrelated math. You conclude that:

>
>So, yes, a 1:1 VSWR requires both an impedance match and a non-reactive
>load.
>

This is not applicable to your previous statement. I'll say it again - VSWR does not result from a mismatch between the characteristic output impedance of the transmitter and the antenna system. If you want to get to basics, * research this *. My statement directly contradicts what you have said and it is derived from authoritative works.

>
>You stated that high VSWR is the "cause" of
>"RF in the shack" and I simply am trying to point out that it is
>not necessarily the case. You seem to have admitted that already with
>the caveat that it occurs in "only a few conditions".
>

That's not what I said. If you're going to quote me, at least get it right. My comment was in reply to your statement that " 'RF in the shack' can occur with a VSWR of 1:1." By responding that I only knew of a few conditions that could cause this, I was saying that RF in the shack is almost always caused by high VSWR. This is consistent with every principle I have put forth throughout this discussion.

>
>As I said, I archive all the posts and would be glad to refer to them

>as necessary. You haven't given any reason as to why I should do so
>based upon my reading of all related posts.
>

You know, this conversation reminds me of discussions I had with CB'ers
in the '60's. They promoted the same misconceptions then as you do now,
and they were just as difficult to reach.

>
>Again, I simply state that high VSWR is not the sole cause of "RF in the
>shack" as you seem to imply.
>

Imply? You mean you went to all this trouble for an implication? Nonsense,
your goal throughout has been to prove someone wrong, otherwise you would
have *asked* what I meant instead of shoving your attitude in my face.

No, your lengthy, unsolicited responses to my original post have consisted
primarily of misquotes, diversion and a dedicated desire to fault my
reasoning at a level commensurate with your own.

What you have written here will be of benefit to no one - it was merely an
effort at semantic superiority. Unfortunately, you *have* taken my time
away from someone I would have enjoyed helping, and who might have put
my advice to good use.

Next time you feel the need to argue for argument's sake, do me a favor and
find someone else.

This conversation is over.

I would be interested in receiving information on IOTA, such as rules etc.
Does anyone have a source of such info, or an ftp site where I can
retrieve same?

Thanks

Mike

Steven Knapp writes:

KN>Good grief! Do you go to Sears, buy a tool, use it for a project then
KN>decide it's not worth the money and return it?

Nope. Never said I did either, BUT if I bought a chair and it turned out
that the color didn't match in my house, I'd want to feel free to go
take it back and swap it UNUSED for one of a better color, or to
get a refund if I returned it unused. THAT is more the kind of thing
we were discussing here, NOT To use it a few weeks and put wear and
tear on the rig & try to return it.

KN>I can see why ham stores do this! If I buy a radio and use it for a
KN>few days and return it, the dealer can't sell it as new. THAT's one
KN>reason why they charge the restocking fee.

Again, that was never the question.

KN>Exceptions to this idea are radios that are dead out of the box, a
KN>case where you've returned two or three DOA radios, or VERY good
KN>customers of the store.

Well, it is not really a matter for us to theorize about at all!
This is all entirely at the option of the stores and the buyers.
If you don't like someone's policy you don't trade there any more,
you go elsewhere. Simple as that!

KB>>
KB>> thanks and "buyer beware"
KB>>
KB>> Jim KD0AV
KB>> sadder but wiser.

KB>Jim, I don't quite understand the reason for your complaint. Did you think
KB>that your dealer was simply going to pocket the money? Remember, he now
KB>has to check out the unit on a test bench to make sure it still works,
KB>because not everyone is as honest as you. Some less educated amateurs who
KB>didn't RTFM might have accidentally applied reverse power and smoked the
KB>insides, or tried to transmit without an antenna and thus fried part of the
KB>output stage before they brought the rig back.

KB>Further, since the dealer did actually sell it, and you might have mailed
KB>in the warranty card, it is no longer a demo but now is considered USED.
KB>You know how big the price difference is between a new rig and the same rig
KB>when you try to sell it two weeks later. The dealer is in exactly the same
KB>situation, but he also has store overhead to cope with. I think your
KB>dealer was quite fair in reducing his normal restocking charge by 40%.

Hardly costs a dealer 15% or 20% of the selling price of a rig to
have his tech spend 5 minutes checking it out on the bench though!
I could understand this if it was a NEW rig that was returned a month
later, but we are talking about a DEMO rig that will be sold again
as a DEMO rig here.

KB>And I think you've learned that if you think a particular piece of gear
KB>might not be exactly what you want, you should insist that the restocking
KB>charges and time period be written on your invoice.

EXACTLY. Good point! That is the name of the game, let the buyer be-
(a)ware!

>If you agree with the opinions expressed, they're mine. If not, who cares?
>

Those are the numbers that are on the Schematics we have, and also on
the transistors in the Final. The Micor is a model C73RCB-3105ET,
The Final Amp is TLD 1962 D, the PA Board is marked TLD 5952 A.
This is the 100 watt continuous duty version.

There are actually Eight transistors in the final amp chain:
M1131 "Controlled Amplifier" (1)
M1132 "Pre Driver" (1) (on the schematic this is an M1134, misprint?)
M1133 "Driver" (2)
M1134 "Power Amplifier (4)

>equal to 146.52 MHz. could be 147.52, could be 52.000 on 6 m. and it could

Bill (et al) since 146.52 is the national simplex calling frequency,
I'd have to assume most vhf oriented hams would understand the informal
CQ. When passing (or being passed more likely :-) a car with ham plates
I sometimes just hold up my hand with fingers spread to show "5" then
"2" -- scared up some nice QSOs that way.

Since '52 is the calling frequency, it is programmed into my mobile
and my ht; isn't it on yours? I also keep several channels on some
so-called common repeater freqs, just in case I could catch a QSO
as I casually scan. BTW on long trips I do carry the ARRL Repeater
Directory so I can locate a "local" repeater that's not already
programmed in if I need to.

BUT: if I see an obvious invitation like Mario's, I'm _very_ likely
to call. And these days I far more likely to be on simplex than a
repeater. I'd like to change that again if I can find a friendly
place to hang out as I commute out to West Cobb County here in the
Atlanta area!

Cheers, Ed Humphries

4288. Re: 1.2 FM repeater question...

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-28 14:11:39 UTC
From: rodell@netcom.com
Message-ID: <rodellD65M3F.FGG@netcom.com>
Source record: 249735

I've operated 1.2 repeaters for quite some time (like 10 years, ouch!) and you have few options for 1.2 in the commercial arena. The ICOM repeaters work well (the 1220). The older model had a few problems but could be made serviceable. There are usually a few used ones around somewhere, often from people who think all you have to do is plug in a repeater and throw a mag mount on your car and you're in the 1.2 business.

You can do the upconvert/downconvert thing with some of the kits around. There are a number of suppliers which make these kinds of things, including my personal favorite, Down East. You will be cheaper this way, although it will be a bit more to maintain.

If you're going to duplex the antenna, TxRx systems provides an excellent 1.2 GHz. duplexer which is rugged and reliable. The last I knew, they were the only ones making a standard version. SincLabs offered a custom version for 1.5K, but that's unreasonable.

For antennas, I recommend the new Spirit series, or the HD models from Comet. I have a personal dislike for the Diamond models. I found their radiation patterns to be more suited for satellite work.

Let me know if you need more specific information.

>60 ft in length. The problem is one of visibility. I have read about
>using armature wire and magnet wire which is very fine. Will this be
>strong enough not to stretch (I believe it will) or break?

#20 hard drawn bare copper wire weighs 3.1 lb per 1000 feet, and has
a recomended tension value of 5 lb. Using those conditions, the
nomograph in the _ARRL Antenna Handbook_ (pp20-3) says you'll have
about 1.5 feet of sag in a 60 foot span. That's certainly do-able.
The major concern is to keep the tension from grossly exceeding the
recomended 5 lb value in windy conditions (a spring, or a weight and
pulley would be recomended). The recomended tension is roughly 1/10th
the breaking strength of the wire, so a 50 pound pull will snap it.

I wouldn't go smaller than #20 wire. The breaking tension drops
rapidly with increasing wire gauge. #26 has 1/4th the breaking
strength of #20, and #32 has 1/16th the breaking strength of #20.
That'll snap under casual wind loading.

>What about birds? I really don't want to be the cause of the death of some
>lovely little birds which visit the courtyard. Previously I used some thin
>insulated multi-strand copper wire at another location but I believe that
>I may have to go with even a less visible approach.

There is some danger that a bird might fly into the wire. I don't
think it's very likely, however, Birds can, of course, perch on
"hot" wires without harm since there's no path *through* the bird
for the current to go. If several birds perch on the wire, they
will increase the tension loading, but unless you have vultures
lighting on your antenna, it shouldn't break and let them fall
to their death's. :-)

From: tbear@kaster.cts.com
Message-ID: <03281995.073740@kaster.cts.com>
Source record: 249886

I have a MFJ-941d antenna tuner with a built in swr meter.I also have a
Vanco swr-2 stand alone meter.I have the Vanco connected between the
941d and a Ts-680s kenwood rig.The question is this....why would there
be a difference in the readings I get from each swr meter?On some bands
I cant get the swr meter in the MFJ tuner to go full scale for calibration.
I can always get the vanco swr meter to go full scale.
Should I ignore the reading from the mfj since the vanco always seems to
"behave" properly? Could the vanco be affecting the mfj meter, I dont
see why it would.The swr can be almost 1-1 on the vanco in some instances
and be 3-1 on the mfj.Any thoughts on this would be helpful.
BTW the antenna is a 40m loop on the roof....if that matters.

I probably know exactly which repeater. It's like that - and worse - nearly 24 hours a day. You actually may have caught them during one of their more civilized periods. During one 15 minute period - about as long as my morbid curiosity can hold out - a while back I counted about 20 references to a particular person as the "second stupidest <term unacceptable in ham radio or usenet> in amateur radio," interspersed with (bad) singing, playing of recorded (disco) music, two different levels of rerereereverbbb, and ongoing commentary about how giving licenses to no-code techs was "ruining amateur radio." The gentlemen (?!) involved gave extra and advanced callsigns.

BUT... in my personal opinion, it's good that the idiots (mostly) congregate on one frequency. It helps the signal to noise ratio elsewhere. I don't think it's where the hobby is heading. If I did, I wouldn't be here.

>Mike, N4PDY

Well, not so fast here. The capture ratio for these radios is somewhere
in the range of 3 db also. Which means that, under certain conditions,
that addtitional 3 db of signal could result in a substantially greater
increase in demodulated signal to noise ratio.

With FM, it's limiter current you keep your eye on, not the "S" meter.

>ARS

That's not all. Besides of the heavy duty smell you get from the "nasty gas",
you can't conceal its noise (and blame the guy sitting next to you) due to the
degree of fiber content on the cookies. When you fart after eating the fiber
cookies, you really do it in style. I've heard of an exec who as fired after
suffering from gas related stomach problems while in a board meeting (when the
President of the company - his boss - first heard the rumbling, he though
there was an earthquake). The exec blamed the fiber cookies for his firing
and put a law suit in motion against the fiber cookies. Hey, maybe I
can try that, collect the money, and retire and dive around the world.
Where can I order the cookies?

In that case, the cookies give you a nasty gas and then you shit until you get
a nice tan.

I've been asked to post the number to the FCC to check on the status of your license. It is 717-337-1212. Reading the VEC manual, it states that you CANNOT transmit until you actually have the ticket in your hand. (unless your upgrading). I got my ticket about a year and a half ago, and it took right around 16 weeks to get to me after the test. It's a real long wait, but well worth it.

Hope this helps, and sorry about the wrong information before......

Here in the Bay area there are NO 2 meter frequency pairs available due
to the high density of repeaters. I used to fly my Cessna 172 around
only talking on the outputs of the repeaters. Why? Think about it!
If you are on an input frequency, at 5000 ft, you are going to wake-up
ALL the repeaters within line-of-sight. From the Bay area, keying up
on an input my bring up multiple repeaters on the same frequency pair.
Great for you, you can have multiple repeater QSO's. Bad for the locals
as they can not hear the other repeaters. By staying on the output,
locals have no problem hearing you, your at 5000 ft.

Hope this helps.....

4312. HTX-202 and 10..er...2000Watts

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-28 20:24:36 UTC
From: fraizer@atosoa.enet.DEc.COM
Message-ID: <9503282010.AA01647@us2rmc.zko.dec.com>
Source record: 249910

I have been monitoring the messages about the HTX-202 obtaining 10Watts while operating from the 13.8 source in a vehicle or from an external power supply.

This does sound quite amusing... I will give the benefit of the doubt to he operators making the claims. Let it be known however...for the record... That I made a trip to the local Radio Shack store today on my lunch break. (I figured that the HTX-202 would be cheaper than buying an AMP for my ICOM if this was true!) We hooked the HTX-202 up to my cigarette lighter and using a VERY GENEROUS watt meter (Radio Shack 2m variety), the radio did 5.7Watts. This was at high idle with no other electrical devices in operation on the vehicle.

I suppose that it is possible to get 10Watts from the HTX-202 if you want to change the final in it. I have done so in my ICOM IC02AT and am achieving 7.5Wattswith a 13.8volt battery pack and 8Watts running from the car battery.
(The battery pack just doesn't have the current to do 8Watts I guess.)

There is a trim pot inside the ICOM that would allow me to push the final harder...up to about 9Watts total but, the radio gets REAL HOT when maxed out like that.

Your VEC manual is out of date. The FCC recently ruled that an amateur
may operate once a license has been issued. There's also an 800
number you can call, but it escapes me right now.

ARLB029 Enforcement said dismal

ZCZC AG95
QST de W1AW
ARRL Bulletin 29 ARLB029
From ARRL Headquarters
Newington CT March 28, 1995
To all radio amateurs

SB QST ARL ARLB029
ARLB029 Enforcement said dismal

Enforcement said ''dismal''

The ARRL has told the FCC that its recent track record in Amateur Service rules enforcement has been ''dismal.''

In comments on an FCC proposal to adopt a standardized schedule of monetary forfeitures (fines) for rules violations in all services, the League said that while there have been only a few cases in the Amateur Service where prompt enforcement action was needed ''badly and quickly,'' the necessary action did not take place ''despite repeated (FCC) promises.''

The ARRL said that the Commission has probably arrived at a reasonable forfeiture schedule but that administration of the schedule is ''the more pressing matter.'' The League said that at issue were whether the fines were sufficient to (1) cause recipients to not violate a particular rule in the future, and (2) deter others from violating the same rule.

The ARRL said that the forfeiture proceeding (in CI Docket 95-6) should be far broader, to include a review of the overall effectiveness of monetary forfeitures as an enforcement tool, given that as presently used such forfeitures are often either ignored or contested.

The League said that in the few cases of amateur rules violations in recent years, FCC promises of action have gone unkept and the problems persist visibly. The ARRL suggested that forfeiture amounts for amateur rules violations be adhered to (instead of greatly reduced) and that collection efforts be carried through.

BV - As said on number 200, Yuki (JI6KVR) says that from 31 March to 2 April, during his QSY in Taiwan, he will join the operations from Pescadores Isl. (AS-103) using BV9A/JI6KVR call. QSL via EA5KB.
DL - From 25 to 28 Maggio, DL6CGC and DL8CZG will be portable from Poel Isl.(EU-098) with SSB/CW/RTTY activity from 10 to 80 mtrs bands and VHF (2 mtrs) also.
EA - EA5URD will be active the 2nd of April from Mazarron Lighthouse (FEA E-120). QSL via EA5GMB.
EA - EA3BT/3 will be QRV the 2nd of April from Islote Galera Palamos (E-256). QSL via EA3DIH.
EA - EA4ENK will be portable the 2nd of April from Isla De Las Vinas (BA-53). QSL via EA5OL.
EA - EA2/EA1FCH will be QRV from Isla Zadorra (VI-07) the 2nd of April. QSL via EA5OL.
EA - Operation is aspected the 2nd of April from Islote Els Pallers (E-258). QSL via EA5OL.
EA - EA1AGZ will be portable the 16th of April from Isla Pollos (VA-25). QSL via EA5OL.
EJ - The WestNet DX Club would like to join the IOTA Contest from Inis Meain Isl. (EU-006).Activity from 27 July to 1 August all bands all modes, AMTOR and PACTOR also. QSL via EI6FR.
HC8 - Horst (DF1VU), Thomas (DF8VK), Joachim (DK5VP) e Frank (DL4VCG) will be portable /HC8 from 25 April to 14 May, working from HC8KU station. Activity all bands from 10 to 160 mtrs, WARC too.
HR - Gerard, HR5/F2JD, is active until 1st of April, expecially on CW, and he'll try to be QRV from Gulf of Fonseca Group (NA-060).
IC8 - From 21 to 23 April Raul (IK8VRS) will be portable IC8 from Procida Isl. (IIA NA01, IOTA EU-031).
ID8 - From 25 to 26 March Raul (IK8VRS), with other friends, will active Le Castella Isl. (IIA KR01) near Capo Rizzuto. QSL via IK8TPJ.
IL3 - From 25 to 26 March, Oreste (IK5VIA) together with Stefano (IK3ABY) and other friends, will be portable IL3 from Lido Isl. (EU-131, IIA VE-32).
JW - DF6JC is QRV as JW/DF6JC until 30 march from JW5E station.
KP4 - Ken, KP4XS (ex KH2F), will join the CQWW WPX SSB Contest from his new QTH in Puerto Rico, helped from K1RZ, K3NA, KF3P e W2EOS.
LU - The special station LW3DSR is active until 26 March,during the 12th

edition of Pan American Sport Games. QSL via LU1DVT.
OZ - From 13 to 20 May Siggi, DL1AZZ, will be active from Mandoe Island (EU-125) as OZ/DL1AZZ/p on 10 to 40 mtrs bands. QSL via home-call.
TP8CE - Station of CERAC (Council of Europe Radio Amateur Club) will be QRV during the weekend, joining the CQWW WPX SSB Contest.QSL via F6FQK.
UA1_fil- Due to government funds reductions,many polar bases on Franz Joseph Land risk to be closed and abandoned next during next months. The personal will be moved to Russia and there will be no more active stations like R1FJL (ex 4K2MAL) and RX1OX/FJL.
V7 - Ken, V73C/AH9C, says that OKDXA (Oklahoma DX Association)is no more QSL manager for his operations:send you direct QSLs to V73C address Kenneth R. Wells, P.O.Box 1255, APO AP 96555-0008, USA.
VK6 - More from previous number: Malcom (VK6LC) says that during his next operation to Faure Island (NO-REF) will be joined from Dave, VK6DLB (they was already active from Malus Island).They have already sent copy of permissions to IOTA Committee. If 20 mtrs band conditions will be poor, VK6ISL will be QRV for Europe on 7084 KHz from 1800Z to 2300Z. QSL via I1HYW (Europe), K1IYD (N.America) and VK6LC (Oceania).
VK0_h - The South Sandwich Island DX Group, announcing a new member in the team (Verne, W8BLA, very able on CW), says that the permission has been asked to land in Heard Island and is waiting for the answer by australian government. Team is still lookin' for CW operators and for a doctor: FAX for further informations to Jerry, AA6BB, +1-503-998-1269, or Tony, WA4JQS, +1-606-679-3151.
VU_ant - Dinesh, AT3D, is comin' back in India,after his trip in Antarctica. He will be QRV with his normal call VU3DEN.
W1 - The 1st of April WW1V and KA1GJ will be active from Cousins Island (NA-137) for two hours, about from 1500 to 1700Z. They will proba-bly be active from the same islnad during the IOTA contest.
W4 - Mac, KM4WE and other Clay County DX Association operators, will be active from 14 to 16 April from Beverly Beach, Florida State East Group (NA-138). QSL via KM4WE, 5180 Mallard Rd., Middleburg, FL 32068-7717, USA.
XE1 - A scientific expedition is aspected to active in June the Jalisco - Nayarit State group (NA-189), precisely Les Tres Marietas Islands and Roca Corbetana.
Xe3 - Bernardo, XE1BGM/3, from Carmen Island (NA-135) says that he is ac-tive during weekends on 14260 and 21260 KHz from 1600Z to 2400Z. He says also that he has big problems with local postal office: dama-ged envelopes and lost QSL. He has now a new address:
Bernardo Garcia Mendoza, P.O.Box 882, Poza Rica, Ver., Mexico.
ZF - AH9B is active as ZF2WH until 27 March, joing the CQWW WPX SSB Test
3D2_cr - Last news from 3D2CU/MM are about a delay of operations due to dif-ficulty to land on Conway Reef. The rough sea with high waves has overturned the ship.
5R8 - Ben, 5R8DS, says that he has improved the 80 mtrs band aerial and he is QRV on 3505 KHz CW and 3792 SSB (he prefers CW). QSL via:
Ben Witvliet, B.P. 404, Antananarivo-101, Madagascar.
5X - From 25 March to 3 April, Franco (IN3DYG) will be active as 5X4D

from Arua, with volunteers. QSL home call.
9H - From 10 to 24 April, Holger (DL5XAT), Matthias (DH1OAH), e Felix (DL8OBC) will be QRV from Gozo Island (EU-023) respectively as 9H3SB, 9H3UF e 9H3UD. Operations on all HF bands in CW/SSB/RTTY/AM-TOR/PACTOR and also RS satellites. QSL for 9H3SB via DL5XAT, Holger Binder, Thorkoppel 15A, D-22885 Barsbuettel, Germany; for 9H3UF via DH1OAH, Matthias Deutscher,P.O.Box 600121, D-30947 Ronnenberg, Germany; for 9H3UD via DL8OBC,Felix J. Riess, P.O.Box 1253,D-30984 Gehrden, Germany.
9Q - Peter, 9Q5TT (ON6TT) helped by Alex 9X5EE (PA3DZN) will join the CQ WW WPX SSB Contest, during this weekend.A special call has been re-quested or the 9Q5TT call will be used. QSl via ON5NT.

>
I have used the Service plan I bought along with my HTX 202. If ind it very
conveinent and nice to have. I have found my Radio to be verry reliable. I here
mor positive comments than negitive comments about them. You do have the option
to renew the Service Plan after the 5yr period. I have had mine for 4yrs. with
few problems.

> As for returning the radio two or three times before you got one that
> worked. If people would stay away from buying that Korean junk from
> Tandy, they would not have these problems.

You get stuff made in Korea or Japan, or from other countries from almost any
brand that you buy. It is more cost effective for the companys to have their
manufacturing plants in other countries where labor is cheaper.

> As for taking the radio to a local store and dropping it off. Do you

> it to the West coast. At least it will be protected during the trip.
>

I used to work for radio shack, and that is not how we sent the repairs. Yes
they did sit around for a couple of days, But for no longer than until Friday
or when there was anouph to fill the shipping box, and We did see to it that
each Item had enouph protection for during the trip.

The problems that I have had with my HTX 202 consist were that the TX audio
went out now and then, but that has bein repaired 2yrs ago. and I accedently
left my Nicad in the back of my tuck and some watter spilled on it, and caused
it to corode, They replaced it for free.

Y'know, it's a damn fine thing that there was no phone number or reply request on this because then it sure would have looked like an advert, what with the massive crossposting and all...

or am I just paranoid?

Unsolicited responses? Didn't you post to a newsgroup? There's
an implied solicitation of response there. Are you new on the Usenet?

After the snide tone you've taken with Todd, maybe it would
appropriate to be a little snide with you in explaining the
basics of the Usenet. But, I normally take a little pity
on newbies and try to be nice.

So, Jack, before you start flaming people, maybe you'd better get
the lay of the land. Your local bookstore probably has 25 different
titles about "getting on the Internet", with sections on proper
Usenet manners. I wish more newbies would read them before going
ballistic.

Does anyone else remember when the only newbies were college freshman?

;-)

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 28/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 28 MARCH AND FORECAST FOR 29 MARCH - 31 MARCH

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 84/26

GOES satellite data for 27 Mar
Daily Proton Fluence >1 MeV: no data
Daily Proton Fluence >10 MeV: no data
Daily Electron Fluence >2 MeV: no data
X-ray background: no data
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
29 Mar 30 Mar 31 Mar
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 29 Mar: 83/24

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 27 Mar
Learmonth 17 3233 3443
Fredericksburg 15 16
Planetary 20 19

Observed Kp for 27 Mar: no data
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
29 Mar 20 Unsettled to active
30 Mar 15 Unsettled
31 Mar 15 Unsettled

COMMENT: IPS Geomagnetic Disturbance Warning 95/08 was issued on 24
March and is current for interval 26 - 31 March.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
28 Mar normal normal-fair poor-fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Mar normal normal-fair poor-fair
30 Mar normal normal-fair poor-fair
31 Mar normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
28 Mar 4 near predicted monthly values to slightly depressed.
Spread F was observed 19-23UT.

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
29 Mar 10 Near predicted monthly values
30 Mar 10 Near predicted monthly values
31 Mar 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 12 was issued on 27 March and
is current for interval 27-30 March. Observed frequencies at
Townsville were near predicted monthly values and at Hobart were
slightly depressed yesterday.

Hi Steve, we got the 100+ lines of disclaimers, closed-circuit advisories, return addresses, phone numbers etc., but most of the "meat" of this Bulletin got truncated here since it was too long for the BBS.

i.e. we got everything up to and including the first three lines about "New ham band at 219 MHz" and then it ended mid-sentence.

Any chance you could still send these out in "bite-sized" pieces of say, less than 120 lines each, for all of us humble Internet BBS users?

Thanks & 73 - Brian, AF4K

Recently I listened in to some HF phone contesting, and (being new to ham radio) left with this question:

What is the content of the brief responses to the CQ's?

The responses sounded like they might begin with the usual RS signal report, and then there were other numerical statements designating I know not what.

The books I have gave me no answer. Had I known how to respond correctly, I could have helped some contesters make contact. Not knowing, I didn't respond at all.

A group of us are planning to go to the Border Waters in northern Minn. over Memorial Day week
If anyone has any input about conditions hints and tips etc. it will be greatly appreciated. Equipment recomendations particularly welcome
I am also looking for Amateur Radio repeaters that might be in the area.
I intend bringing my GPS and a hand held for emergency use. Current plans are for 3 canoes (rented) and one Folbot to use on the journey. Fishing and escape from work are the primary objectives.

This past weekend my two brothers, their wives, and I travelled to Pennsylvania to visit my home town, Bethlehem, PA. We used simplex frequency 146.50 mHz. We had to move twice (up/down 10 kHz.) to avoid interfering with other QSO's. In both cases the stations appeared not to be mobile. So, yes, there is some simplex work out there, but not much.

BTW, what is `52 simplex.' Does it mean 145.52 mHz? 145.20 mHz? Is this frequency, whatever it is, a common mobile frequency? According to the ARRL 2-meter band plan, there is no simplex frequency (frequencies) suggested for mobile simplex. Should there be?

>I'd say wait a 12 days after the test date, call, then call every other
>day until you get it...

It was 10 days in the case of my 11-year old son. He has passed the
test on Sunday March 19, his 610s were received by the FCC on the
22nd, sent to FCC electronically on the 25th, lost by the FCC on the
28th, resent again by ARRL the same day, and the callsign assigned
today. Ordinarily, 610s filed electronically are assigned callsigns
the same night.

I called FCC several times. The average number to not to get a busy
signal was 3 min, and an average time waiting was about 5 min. ARRL
gave me, by E-mail, exact times of receiving the VEC packet and
sending 610s to FCC.

Altogether, I am very satisfied with both ARRL and FCC. Mistakes
happen everywhere, just good organizations correct them right away.
This does not include INS, where, for example, after waiting 5 hours
in line, one cannot get extra forms, because the office has closed
to cutomers 5 minutes ago (2pm).

Hi and welcome!

I took my Tech exam on 3/15 and was wondering the same thing. I figured I ought to give the ARRL and FCC about two weeks. Instead, I called the 800 number after eleven days. They told me that they had just processed the license that day and cheerfully gave me my call sign. Lucky timing on my part.

: amateur stations in repeater service.

There are several things cooking right now with respect to Repeater
coordination and yes, it's possible the reinstatement of licensing of
repeaters could come out of it. To my knowledge, however, this is only a
discussion point right now with no firm proposals being made. It's not
clear how favorable the FCC would be to such a change.

: I have in front of me a form ostensibly sanctioned by the Mid-America
: Coordination Council (an organization I have never heard of). In the
: first paragraph a vague reference is made to "possible FCC regulatory
: proposals". The second paragraph cites the "proposal" (vaguely cited
: in the first paragraph) as justification for advising the providing of
: certain information to the applicable frequency coordination authority
: since it will be necessary for the operator of an amateur repeater to
: obtain an FCC amateur repeater license.

MACC is one of the better know and organized Repeater Coordinating bodies
in the U.S. MACC and MACC affiliated groups cover most of the central
U.S. and the Norht West. In my opinion they are getting a little ahead of
themselves on the issue you are talking about, but perhaps better that,
than falling behind. In any case, they just seem to be doing the job that
they have volunteered to do.

52 usually refers to 146.52 simplex. This is the national simplex frequency
IAW my 1988-1989 ARRL repeater directory page 29. The directory also lists
several other simplex frequencies. While traveling, it is usually safest to
use only thoes frequencies listed as simplex frequencies since there should
never be a repeater input or output on thoes frequencies.

Maybe the reason there isn't much activity on "52" is that many newer hams
don't know about it. (No flames intended) Hey old timers lets get the word
out to the newer members of the radio fraternity.

BTW the following are the national simplex frequencies for several VHF/UHF
bands also from the 88-89 ARRL Repeater Directory:

50Mhz: 52.525MHz
144Mhz: 146.520MHz
220MHz: 223.500MHz
440MHz: 446.000MHz
900MHz: 906.500MHz
1.2GHz: 1294.500MHz

Hope this helps. Remember to listen to 146.52 when traveling and maybe you'll
meet some new friends.

This is a real nice area for canoeing and getting-away-from-it-all.
I went with a group of 4 (two canoes) a few years ago (hmm, well,
maybe more than a "few" years ago; more like 25 years ago.)
Here are a few random comments:

- Get a good map of the area you will be visiting. Good ones that
show the bodies of water and portage trails are available.

- Weather can be variable. It was warm but rained a lot in June.
Take rain gear.

- Take lots of DEET.

- Depending on your route, frequent portages may be necessary. Have
some big back packs or some way to load up your gear so you can carry it
easily.

- Campsites are generally primitive. That is, you look for enough
open space to set up your tent.

- The area near the put in point was quite crowded with motor boats
and week-end visitors fishing. But after two days of canoeing and
several portages, we got away from them and didn't see but one or
two other campers for about a week till we got back.

- I am not much into fishing myself, but the walleyes sure tasted good.

I can't tell you about repeaters. The repeater directory lists one in
Ely. You may get out of HT range. A simple coaxial antenna and
some coax that you could throw up in a tree might help. There
aren't a lot of big hills for you to climb to get a better
shot at the repeater.

A little single band QRP HF radio seems like it might be fun to take along.

Now maybe someone else out there can give you a little more up to date information. :-)

73 ES have a nice trip

Gary

146.520 MHz (aka "five two simplex" or just "five two") has been
recognized as the national (US) 2m simplex frequency since the early
1970's. This is for either mobile or base stations.

In the 1993-1994 Repeater Directory the band plan shows 146.520MHz
listed as the "National Simplex Frequency". This is on the second
page of footnotes for the 144MHz bandplan. It is there but not too obvious.

>
>Maybe the reason there isn't much activity on "52" is that many newer hams

Probably true, but a major contributor is that over the years
people have moved to whatever their favorite repeater is.

> Hey old timers lets get the word
>out to the newer members of the radio fraternity.

Norm is right here. Us "old-timers" do have to make some effort to
keep the newbies informed. But what are some good ways to do it?
Our club newsletter editor is always asking for articles and I have
been thinking about writing something up on basic topics
but I just never get around to it.

What could be done here on USENET? If someone asks "What's 52 simplex?"
they may get a flood of answers, but the usual problem that new

people usually don't have any idea of what questions to ask in the first
place. Maybe we need a QNAOE (Questions Not Asked Often Enough) file.

>
>BTW the following are the national simplex frequencies for several VHF/UHF
>bands also from the 88-89 ARRL Repeater Directory:
>
>50Mhz: 52.525MHz

I really am going to get back to monitoring 52.525 Real Soon Now. :-)
The receiver is on my work bench waiting to be tuned up.

>144Mhz: 146.520MHz

I used to monitor this from home but it would sometimes get too busy.
Maybe I'll try again.

>220MHz: 223.500MHz

I monitor this from home a lot (except when some local broadband
trash comes up) but there is not much activity except during VHF contests.

>440MHz: 446.000MHz
>900MHz: 906.500MHz
>1.2GHz: 1294.500MHz
>
>
>Hope this helps. Remember to listen to 146.52 when traveling and maybe you'll
>meet some new friends.

I think it will help. I have occasionally listened to 52 when traveling.
Sometimes I'll hear locals; frequently I'll just hear other
itinerate mobiles like myself.

Some good comments, Norm. Some newbies have probably learned
about "five-two" and a few of us old-timers have been reminded to make
some use of it.

73,

Gary

Dayton Hamvention - K1BQT on "Hi-tech Scrounging"

Attention "Quarterly Devices" Fans: If you're headed to the Dayton Hamvention this year, check out the VHF/UHF forum of the Midwest VHF/UHF Society. Rick Littlefield, K1BQT, "Quarterly Devices" columnist for "Communications Quarterly" magazine, will share the secrets of "high tech scrounging" or, as he calls it, "that artful pocess every resourceful designer must master i order to gain access to the world of high-tech R&D."

Learn what products are fair game for sample requests, where to fing out about new electronic components, and how to obtain samples for your latest project. K1BQT, a master scrounger himself, will teach you some tricks of the trade. Check your Hamvention program for date, time and place.

HIGHLIGHTS OF MAY, 1995 "CQ" MAGAZINE

Copyright 1995 by CQ Communications, Inc.

Results of the 1994 CQ World-Wide WPX CW Contest highlight the May, 1995, issue of "CQ", along with a fascinating report on the 9G5TL DXpedition to Ghana for the 1994 CQ World-Wide DX Contest.

Operating a DXpedition station during a major contest is the dream of many an avid DXer and contester. But imagine doing it from a country that, just two years earlier, had considered it a crime to operate a ham radio station. "The 9G5TL Story," by Warren Hill, KF7AY, tells the exciting tale of planning and preparing for this ham radio adventure, the thrills of operating from a rare country during the biggest contest of them all, and of the long-term benefits of the operation to ham radio in Ghana.

The 1995 CQ WW WPX Contest is now history (for the uninitiated, that's short for the CQ World-Wide Worked All Prefixes Contest, in which you try to contact as many stations with as many different callsign prefixes as you can during a 48-hour period). And the results are in from the 1994 event. May's "CQ" magazine reports fully on the CW portion of the contest. Here's a brief list of the trophy winners:

Single Operator, All Band --
-- World: John Crovelli (W2GD), P40W
-- USA: Tyler Stewart, KF3P
-- Oceania: Michael Sato, AH6MZ
-- Canada: John Sluymer, XL3EJ
-- Canada, low power: Gary Caldwell, XL7NTT
-- Japan: Satoshi Hara, JH5FXP

Single Operator, Single Band --
-- World: Martin Monsalvo AZ4F (LW9EUJ)
-- World, 7 MHz: Bob Furzer, 9K2ZZ
-- World, 3.5 MHz: Pavel Vachal, OK1DXS
-- Oceania: Boyet Lorenzo, 4F3AAL
-- USA: John Yodis, K2VV
-- USA, 28 MHz: Phil Koch, K3UA

: Hi Everyone

: My wife and I want to get involved with Skywarn. Any Info on how to
: proceed would be greatly appreciated.

I don't know where you are from, but if Skywarn is active (it can be called other things in some areas) you should hear of a local 2M net in operation.... check on local repeaters, clubs, or the local ARES organization. If all else fails, call the local NWS office, they would either know if one is active, or be looking for one to form. If all else fails, contact the Section EC for ARES in your ARRL section, which can be found in the back section of QST.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 29/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 29 MARCH AND FORECAST FOR 30 MARCH - 01 APRIL

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 81/22

GOES satellite data for 28 Mar
Daily Proton Fluence >1 MeV: 2.1E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.3E+08 (moderate)
X-ray background: B1.3
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
30 Mar 31 Mar 01 Apr
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 30 Mar: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled

Estimated Indices : A K Observed A Index 28 Mar
Learmonth 12 3333 3321
Fredericksburg 20 12
Planetary 20 18

Observed Kp for 28 Mar: 3353 3332
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
30 Mar 15 Unsettled to active
31 Mar 15 Unsettled to active
01 Apr 15 Unsettled to active

COMMENT: Active periods can be expected during local night. IPS
Geomagnetic Disturbance Warning 95/08 was issued on 24 March and is
current for interval 26 - 31 March.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH
29 Mar normal normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
30 Mar normal normal fair
31 Mar normal normal fair
01 Apr normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
29 Mar 13 near predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
30 Mar 15 Near predicted monthly values
31 Mar 15 Near predicted monthly values
01 Apr 20 Near predicted monthly values

COMMENT: IPS HF Communications Warning 12 was issued on 27 March
and is current for interval 27-30 March. MUFs at Townsville were
depressed by up to 15-20% during the interval 0100-0400UT. Near
predicted values were observed at other times, at Townsville.
MUFs at Hobart were slightly depressed for most of the UT day,
with strong spread F observed during local night, indicating
degraded local night conditions at Hobart.

It's not the major manufacturers who will be affected, it's the clone houses. While many of them skirt present regulations, the newly proposed regulations will practically give them carte blanche to sell noisemakers. Among other things, the new regulations won't require certification of entire computer assemblies if the component subassemblies meet Part 15 certification. As most people who've slapped clones together know, subassembly compliance isn't sufficient to assure that the assembled system will be in compliance.

If you'll read the minutes of the last ARRL BOD meeting, you'll find
that this is one of the issues the ARRL will be bringing up with
coordinators at the meeting of coordinating bodies they are calling.
If you don't like this idea, I certainly don't, then you should
contact your local coordinators and express your opinion on the
matter strongly. Make sure that they do the same at the ARRL meeting.
This is one idea that needs to be nipped in the bud before we are
back to the horrors of the 70s in regard to repeater licensing and
modification.

This is another case, like the one currently boiling regarding
HF bulletin stations, where a sledge hammer is being proposed
to deal with a mosquito.

>How did he get a license like that?

I doubt his reciprocal license has this call on it. According to the contest rules, you can use any legal portable prefix. If the license says he should be signing W7/xxx, then he interpreted the "W7" part to be generic, and substituted a more WPX-y prefix.

It's all kind of goofy because there are so many U.S. hams who think their two-letter/one-number prefixes are so rare that they'll create huge pileups of stations trying to work them for prefix multipliers. I oughta know.

Last Chance for Connecticut Hams to Sign Up for Special Olympic Traffic Operations.

Perhaps with the weather still brisk, you are thinking that June and July are very distant. Unfortunately, the folks at Special Olympics are not! Since they expect about 45,000 volunteers in total, they must have the names and addresses submitted NOW in order to issue the necessary credentials. Without credentials, _YOU_ will not be allowed to serve!

As a reminder, I am Project Manager for the group that will handle third-party traffic messages from the athletes and the general public to send back to their families and friends at home. Traffic handling experience is not necessary - we have some slick computer programs to make it simple enough for athletes and others to enter their own messages, but we _do_ require hams to staff the booths and review the message content before transmitting.

If you plan to volunteer, you must do it _NOW_! Hit that "Reply Key" and send me a message with your name, callsign, address and telephone number(s). I will then be in touch with you at a later date to arrange the actual scheduling of the date(s) you can serve.

I am not asking for anybody to work the whole time (except my own "Hamily"), not even a whole day. Just a 3 hour shift, and believe me, it will give _you_ a warm and fuzzy feeling helping others!

Some confusion here--as far as I've been able to tell, the 33, 73, 88 and
the like used as closings by telegraphers were never "numbered radiograms"
(such as the ones the ARRL uses to expedite traffic handling--"canned" text
for particular situations), but rather developed as a jargon within the
land-line telegraphers' fraternity.

So long as the rest of us practice some restraint, these types tend to have nobody to talk to but themselves. As a result, they tend to congregate in one place, like the repeater you mention, and leave the rest of the band relatively uncontaminated. In the Philadelphia area there's a simplex frequency that, late in the evening, serves the same function.

>But they have! Contests deliberately avoid 30, 17 and 12 meter bands.
>They are always free of contests, to my knowledge.
>

Ne> Thanks for the info. Now all we need is your personal guarantee that
Ne> these bands will be open during an emergency.
Ne> 73, Jack WB3U

The only problem I can see Jack is there would be no one to answer since
everyone would be listening or operating in the 'test <G>. Contesting
is just another facet of amateur radio. I, personally, enjoy the
competition AND comraderie.

Just remember an old adage I've heard bandied about for years.....use em or
lose em

Sounds like you need both the service manual and a user's manual for
the GP300. Try Motorola National Parts at (800) 422-4210.

Part 15 only applies to manufacture and sale, NOT to use.

For example, if you buy a PC which is Part 15 certified and later add a modem card, upgrade the CPU, or put in an ethernet card, the Part 15 certification tag is meaningless.

Some folks here seem to have Part 15 confused with "type acceptance". They are two separate and distinct issues and are not related in any sense.

An amateur can modify ANY equipment to his/her hearts content, so long as it's use complies with Part 97, including spurs, purity, etc., etc., etc.

The manufacturer must certify Part 15 compliance at time of sale, but the user is NOT responsible for maintaining that compliance, any more than the user of a PC is responsible for retesting his PC if he modifies it or adds a card.

>Keep it in mind on your next trip, eh?

I usually listen on 146.52 when driving. Once in a while somebody hollers
and its sometimes me. Nobody can talk to each other if everybody is
just listening.

Get some address number stickers and plaster "146.52" or even just "52"
on the back of your rig. It may help to have ham plates or a callsign
displayed as well.

Out here in the West (not Texas west) there are so few hams in the boonies
that a CB is a pretty good idea too. The goofballs are mostly in the
cities so when the skip is gone it can be pretty reasonable, believe it
or not!

I've acquired an HF station which came with an amp/autotuner which
delivers 600 watts output 80-10m. The transceiver can put out 100w.
How much need would I have of 600w especially if I want to 'work the
world'? I really didn't plan on acquiring the amp, but now that I
have it, should I keep it, or would I do okay without? I plan to
use the Butternut 80-10m vertical that came with the setup until I
find some real estate where I can string up lots of long dipoles.
I'm new to HF, and your expert advice will be greatly appreciated.

4388. Re: NO CODE TECHS GETTING THE SHAFT ON LOCAL REPEATER

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-29 00:00:00 UTC
From: dstock@hpqmdla.sqf.hp.com
Message-ID: <D6771I.Eq2@hpqmoea.sqf.hp.com>
Source record: 249756

Cassandra (clr@iac.net) wrote:

: since I don't have to learn the code. I am warned about the fact that
: I will be looked down on for not taking the code. Truth is, I don't
: have time to learn the code before the test and I can always relearn
: it later. Or so I thought.

I must admit that I'm astounded at the way some people in the US are hung up on a licence class structure. OK, I know that extremists are always disproportionately loud, and that there are plenty of reasonable (and quiet) people around, but the tone of some people opposing no-code licences is bordering on hatred.

I live in a country which has had a no-code licence for over a generation, so I think our attitude to it has had time to settle. Our no-code licence is identical to the "full" licence except that access to bands below 30 MHz is removed. Above 30MHz, both versions are equal.

When the no-code licence was introduced there were loud arguments against it. Nowadays, ask a full licencee about a no-coder and the opinions expressed will be along the lines of:

It's OK if you're only interested in VHF-microwaves
Most no-coders are busy learning Morse
At least something is available for someone with cw learning problems
They're missing out on all the fun on HF
They're missing out on all the fun on CW

I estimate 0.01% on the vituperation scale :-) Some of *the* gurus on a number of topics are code free types as well.

: I've never been turned off so fast by anything before in my life. The
: statements about people with no-code tech licenses not "knowing" about
: propagation or any other aspect of the hobby for that matter may all
: be true.

I get the impression that the majority of the no-code haters are proud of their HF achievements. As the no-coders don't get to go on HF, I cannot see how the no-coders can affect them, unless they find the simple knowledge that no coders EXIST to be offensive ? Or are they worried about congestion on 2 metres threatening their favourite local nets?

: But each of us have aspects about amateur radio that we
: don't truly know or understand. I think that is why there are higher
: classes to be achieved.

No, I don't understand the raison d'etre of your multiple licence classes, but that is certainly not the reason. The US Extra class licence tests are pretty basic when you consider the knowledge that is built up by an average amateur who gets going successfully on a few different modes, might build himself an ATU or a power supply, joins in a field-day group, tries to fix simpler faults etc. Even the 20wpm is not so bad - sure if you try to learn your way to 20wpm, it's a fair bit of work, even to get proficient enough to answer the "10 questions" version (or whatever the number is) If, however you get your Morse just good enough to hold slow QSOs, and start using it, then 20wpm 100% copy seems to come along without pain.

If you want to do well at any area of amateur radio: contesting, construction, 5bandDXCC, satellites, moonbounce, etc you will grow a lot of knowledge on the way. The knowledge components of all of the licence classes (including my UK one) are not much good as incentives, but they are BEGINNINGS.

: The higher the license class, the harder the
: test, the better the reward is; more bandwidth.

This is the only real incentive in the system, and it's a synthetic one.

: There is not an
: operater out there that was born knowing all.

But some think they were.

It's possible to get a high class licence and still know so little about radio as to be unable to get going without quite a lot of further knowledge or help. We've all seen examples that illustrate this. I think that the true purpose of licences is to keep people off the air until they have got just sufficient basic knowledge to know how to keep out of trouble, and when to seek help. If they are interested in the hobby, they'll find enough natural incentives that suit their interests, and which extend to AND BEYOND the very frontiers of technology. No exam scheme can possibly do this.

: I had a true desire to get back into the hobby. I have been reading
: this newsgroup since about test day. By the time I received my
: license I had all but lost interest again. I have no desire to spend
: money on new equipment (my last purchase was a Drake TR-33C) to find
: out if this attitude is prevalent here locally. If half of the energy
: that is spent pointing out how the no-code tech class license is a
: lowering of the standards was spent encouraging these people who are
: showing some interest into furthering their knowledge and skills, then
: amateur radio would begin to flourish instead of losing interest.

This newsgroup is not at all a fair representation of amateur radio. There are some vicious arguments going on here, only the transistor versus vacuum tube arguments amongst the hifi nuts seems to rage as incessantly, and that lacks the hatred seen here.

: I never wanted to build a radio or design circuitry. I wanted to
: participate in a communications hobby that had structure and class. I
: was willing to learn some electronics, morse code, and practice some
: ethics to do so. Apparently that just isn't enough for some.
: Cassandra

Well, If you could get a licence that'll get you on HF or the satellites, to be able to reach Europe, there's an entire continent over here that doesn't give a damn what licence class you have, and will simply make you welcome.

The QRP bunch run usually slowish CW on 3560, 7030, 14060, 21060 and are glad to work *anyone* Even US stations can be expected to be 100% welcoming :-) and you are safely at the opposite end of the band to the AM hernia operation "over my dead body" nets.

"Nil Illegitimi Carborundum",

David GM4ZNX

4389. Not much 2-m on the hwys?

I saw the post from the fellow who complained that he didn't
have anybody to talk to on the highways from his RV--this mailer
apparently won't let me quote. :-(

I've found on a number of long trips that there isn't much going
on 52 simplex. But it hasn't been dead, either. There are usually
some truck-driving hams to be found every half-hour or so, at least
on major highways. And if you're desperate for chat, you can always
tune in local repeaters--THAT's where the locals are.

I *would* like to see more folks monitor 52 simplex on the hwys, though.
Keep it in mind on your next trip, eh?

Hey John,

I hate to bring it to your attention, but I'm sure that you made a typo error here.

You meant 57 watts, right?

73, Rick, WB7UGZ

(I sure wish I knew what the final transistor was in that 202, I wanna look it up)

4393. Re: QTH for AJ7/JK2VOC

Source record: 249761

There were actually two AJ7 stations on. They were AJ7/JK2VOC,
and AJ7/JA3NZC. I understand they got recipricol operating
permits. They operated from W7RM in La Center Washington (one of the
finest contest super-stations on the west coast).

DL< X-Newsreader: TIN [version 1.2 PL2]

DL< I just purchased a used '93 Toyota Camry XLE this past weekend. Would
DL< like to hear from folks who have installed 2M or Dual Band radios in
DL< these vehicles. Questions:

DL< 1. Where did you mount your radio? I have the CD Player, so indash is
DL< kinda out of the question.
I put mine in the console "glovebox under the car radio I took off the
door for the center glovebox and put the mounting bracket on the radi
upside down
DL< 2. Did you find any RF problems. My Camry has a
security alarm, so DL< I'd be especially interested in this aspect.
No alarm system on mine, no other rf problems
DL< 3. What type(s) of antennas are you using and how do they perform.
DL< (No "drill the hole" available with the Sunroof)
I used 2 mag mounts on the trunk lid and ran the cable through the trunk
(hinge side) and under the back seat
DL< 4. Any other notes or suggestions would be greatly helpful.
nope 73's EJ! N6OID
DL< Thanks and 73's! - Dave

Cross-posted to: sci.electronics,rec.radio.amateur.misc

Many thanks for the help in locating 7441 ICs and nixie tubes for my friend.

He was so happy to get the info. He thinks USENET is a GOD.

Anyway, he wanted to throw this one out, to see if he could stump the collective brains.

He has a number of RadioTelephones, in which the handsets are broken or worn out. He says the handsets look like standard 500 series phone handsets, but have a push-to-talk button between the mic and the speaker, on the same side as both mic and speaker. He would like to talk to anyone who has one or more of these. Color is no problem, lack of speaker or mic is no problem (assuming screw on caps and such), and cords are optional. Since I can only vaguely picture the item, I apologize for the description. Does anyone have a pointer to where any of these be found?

Thanks in advance, and thanks for the 7441 info.

: on 52 simplex. But it hasn't been dead, either. There are usually
: some truck-driving hams to be found every half-hour or so, at least
: on major highways. And if you're desperate for chat, you can always
: tune in local repeaters--THAT's where the locals are.

: I *would* like to see more folks monitor 52 simplex on the hwys, though.
: Keep it in mind on your next trip, eh?

Has anyone ever considered a mobile beacon to raise some activity on VHF/UHF simplex frequencies when traveling? I usually have the radio on but grow tired of calling to see if anyone is out there. If there were a way to automatically check for activity and alert us when someone else is in range, there may be more activity on 146.52. The beacon could be as simple as a fast cw id at random intervals. The id would only get transmitted if nothing breaks the squelch for a programmable time. The delay would be to listen for ongoing QSO's and other beacons. The beacon could also copy the cw id and provide a display so the operator knows who is on the frequency.

Just and idea.

>an AMP for my ICOM if this was true!)

What? Were you in the market for a 10 watt amp? And, why do you
say it would be cheaper. There are several 30 watt amps for less $
than the HTX-202.

>We hooked the HTX-202 up to my
>cigarette lighter and using a VERY GENEROUS watt meter (Radio Shack 2m
>variety), the radio did 5.7Watts.

It was very GENEROUS of the folks at RS to let you take their HT out to
the car and play with it. Have you checked your antenna system lately?

>This was at high idle with no other electrical devices in operation
>on the vehicle.

Why would this matter? If the vehicle was at high idle, do you really
think it would matter if you had the sterio on? The HTX-202 only draws
1.55 amps at that voltage. Do you realize how many amps are available
when the car is running? Now I *really* suspect your findings.

4402. When the State Department talks people listen

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-29 00:00:00 UTC
From: dbasinge@nickel.ucs.indiana.edu
Message-ID: <dbasinge-2903951024400001@ds9.hper.indiana.edu>
Source record: 249770

I have a funny story. I'm the staff advisor for our university amateur radio club. I was sitting in my office when I got a call from the State Department (yoks, What have I done :-). The person on the line told me that the Secret Service would appreciate if I would turn off our repeater and ask our club not to use our radio equipment till 1pm today.

I forgot that Secretary of State Warren Chisrtoper is given a talk today at Indiana University. The auditorium where he is talking is one floor below our club's ham shack. I felt really bad that I did not think to turn off the equipment myself, but the person at the State Department said it was no problem and appreciated my help.

I wish I had a picture of my face when I got the call though :-).

I'm curious why you are opposed to repeater licensing. I don't
remember it being that big a deal when it was in place before. The
application was complicated, but not overly. Comments?

I think it's possible that Jim is referring to a Micor base station.
Just curious... If so, I can check for PA parts with a commercial
and ham friend out this way. Please let me know if it's a mobile
or base.

BTW, I bought a HiBand Micor, 80W for $35. And it works! But it's
a mobile rig. Gary's right, you should be able to find a similar
deal at the swap meets for a whole radio.

4411. Looking for ideas for new ham shack

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-29 00:32:41 UTC
From: randyh@gvgadg.gvg.tek.com
Message-ID: <3la9r9$m33@gv-gate.gvg.tek.com>
Source record: 249790

I will be building a new extension on to my house. My wife gets a new dinning room and I get a new ham shack.

It will be single level, about 400 - 500 sq feet. The room will be on a concert slab, probably with in floor-heat. There will be a small equipment room to contain the water heater, coax entry, and power subpanel. I am active on HF and satellites, and plan on having a workbench area for projects. There will be a tower, about 30 feet (height to clear trees), next to the addition for the VHF/UHF antennas. I will have a couple runs of hardline up that tower.

So, I am looking for ideas on building the perfect new ham shack. Please pass along any ideas that you may have.

Thanks,

Randy

BF>
BF>Burt K1OIK

Your message is a sad testimonial to the present state of ham radio.
You said that if you lived elsewhere the ham atmosphere would be different.
Well, I'm afraid not.
Before I left for Florida on February 15th I put my call sign on the
rear of my travel trailer in 3" high Scotchlite letters along with "52 SIMP"
From Cape Cod to Tampa Fla. I did not receive ONE call. Since I don't
travel as fast as the automobile traffic most would pass me. During the
trip about 15 hams with vanity plates passed me. The majority had 5/8 whips
which I'm sure were not CB. I called every one. No response. Well actually
not true, one waved. Obviously N1SGN is a new call therefore not worthy of
a reply or a call. I wonder what will happen when I get my old WA1FSC call

back? I also wonder what would have happened if one of them needed assistance and remembered passing me? I bet I'd get a call then. (Funny, my radio dosen't seem to receive any more) I would be sure to wave back as I continued on my way. But no, I'm not like them. I WOULD stop and assist.
You mentioned in one of our discussions about the hundreds of new young hams who, after being exposed to this pompous, ignorant mentality have given up the hobby. And the few who stay become cloned and stagnate in the mire of the cancerous disease spread by these old men with no lives. How do we encourage these young people to stick with the hobby? I suppose by example. If we get frustrated and quit, what will be left. Look at the local condition. Ron McLeod, K1FTB, who lives in Englewood, FL dosen't even use his 2M HT any more. He said it depresses him. However when he knew I was in the area he kept it on every day. And when I did call him when I got to Sarasota we talked for almost a half hour. Had to end the QSO when the old farts started doubling on me and making remarks. Sad, sad, sad.....
However we are not alone. There are many who feel the way we do. Sarasota, FL has four active repeaters. Three of them have the cancer but 147.300 is definitely a refreshing experience. It's courtesy tone is a cricket chirp, which caught my attention, no annoying messages, no NETS. The hams on that repeater have a sense of humor and talk about interesting subjects. No colostomy bags, coffee breaks, Medicaid bill problems, or endless pissing and moaning. My first transmission, "N1SGN hanging out in Sarasota", got a lot of attention. Real nice guys AND gals, NICE HAMS!
So Burt, hang in there. All is not lost as long as we don't give in. Maybe we just have to set an example to keep the young ones interested. I gave up once before, that was a mistake.

Well, as a high-time military instructor pilot I will tell you that you would be better off concentrating on piloting rather than radio operating as long as you still categorize yourself a student pilot. Keep your mind on your driving, and all that! Mother nature is terribly unforgiving of any carelessness or neglect, as the poster says... Safe flying demands all your attention, especially early in your flying career.

Secondly, you should never work a repeater input from an airplane or other high place--you are likely working the inputs of other repeaters as well. At 5000 ft, you don't need a repeater--you can "see" anybody who can "see" the repeater direct. I'd advise using the repeater output initially, then moving to a simplex freq to free up the repeater for those who need it to communicate.

Happy landings...

used to be there, but whoever designed the forms last year didn't
put it back on there when they were done. i guess they think that
everyone gets a "complete" 610 that has the form and the instructions
together and you remove the form from the instructions before sending
it in...

probably won't be able to get it fixed for a couple of years minimum.
governments are like that.

of course, maybe it was a secret plot to prevent people from renewing
their license...they wouldn't be able to send in a form so they'd go
away and in 12 years the ham bands are open to the people that want 'em..
or not.

what is the problem ? think of all the other repeaters you are in
"Line of Sight" of at 5k feet. this works both ways - you'll hear all
the other machines as well as interfere with all of them besides the
one you want to use....

That seems to be a common plateau. I got over it by copying a few words behind. Try to hear the word rather than the letters. That way you don't waste time writing down T-H-E, you hear THE. Practice putting the pencil down and copy in your head. You'll be doing 45wpm in no time! Well, maybe not that but I have found myself talking to my wife while in QSO because I can hear the words coming. You'll do it with time.

Hey, for a nominal fee of $5, to cover costs, I'd be happy to
make sure the 610 gets to the FCC. Just send your completed
610 and $5 to me, I'll take care of the rest!

Uh... uh... oh.. uh... I'm sorry. I thought I was W5YI for minute.
Sorry...

4425. << L.I. Tower Case - Update. NK2T vs Town of Hempstead, NY

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-29 03:33:26 UTC
From: hmn@i-2000.com
Message-ID: <3lake6$le4@i-2000.com>
Source record: 249816

The following is an excerp from a news release that was sent to Local Radio and Television stations
regarding the NK2T vs Town of Hempstead, NY Amateur radio Tower Case.

"Since July 1994, there have been many important developments in this case. The New York State Supreme Court ordered the Town of Hempstead to rehear the case. So on January 25, 1995 the
Town Zoning board was presented with a 2 hour presentation by my attorney Peter Mineo, of Forchelli,
Schartz, Mineo & Carlino of Mineola, NY, along with a panel of expert witnesses covering everything
from bio-hazards to radio frequency interference. Along with the lawyers and experts there were more
than 150 individuals in support of my position. You should also know Congressman Peter T. King (3rd
CD) played an important role in this case by getting the Federal Communications Commission involved.
A letter from Ralph A. Haller, Chief of the Private Radio Bureau of the Federal Communications
Commissions supporting my position was submitted to the ZBA defining the role of the federal
government in issues concerning radio amateurs.

As was mentioned in your original story of July 94, this case has become a major concern for the amateur radio community of Long Island and the United States. Besides the actions brought
against the Town of Hempstead by myself, the American Radio Relay League, the national organization that represents amateur radio operators has now become involved. Chris Imlay, of Booth,
Feret & Imlay, a Washington, DC law firm, and general council the ARRL has filed a brief on my
behalf.

The problem I am experiencing now is the following. The law requires the ZBA to make a decision within 60 days. Well, 60 days has come and gone and there is no decision. In order for me to
force the Town Zoning Board to do what they must do under the law, I have to file another court
action. This is absurd since the cost of this case has is no more than $25,000 with no sign of ending
soon. Should it become necessary, this case will be taken into federal court with the aid of the
American Radio Relay League and R.A.D.I.O., The Radio Amateurs Defense & Information Organization Inc. At that point financial damages will be sought; similar to the well know Bodony vs

The Town of Sands Point NY case, where the Town was forced to pay the amateur radio operator in
excess of $50,000 for his legal fees

For whatever reason the Town of Hempstead is holding up on making their decision, I have but only one choice and that is to continue my legal battle. At this point I am now considering the
possibility of bringing a civil rights and conspiracy action against the members of the ZBA and the
Town of Hempstead. It is unbelievable that the Town can be so bold in their disregard for the law in
which they are suppose to uphold.

I truly believe since this story had merit back in July 1994 there is potential for a good follow
up story. Who know's what's lurking behind the scenes; discrimination, conspiracy, or just a group of
people who have nothing better to do than waste our hard earned tax dollars."

Please pass along any information on this case to the publications, Media and other parties interested.

We are also looking for financial support. Any donations, whether they be $1.00 or more can be sent
to:
R.A.D.I.O.
c/o PO BOX 343
Williston Park, NY 11596

Also call the R.A.D.I.O. inofrmation line 24 hrs/day for the latest in this case.

As always we thank you for your support.

You can also read additional information on this case by checking the
rec.radio.amateurs.antenna

N1SGN, (sorry; did not catch your name) I think you're making too big of a judgement from the lack of activity on 146.52 simplex, while traveling.

Next trip, try a newer 50 watt mobile rig which can scan, and has the standard bandplan repeater offsets programmed into the VFOs. When I travel, I scan between 145.10 and 148.00. Usually I can scan upon an active repeater, and I've had many pleasant 2 meter repeater QSOs when traveling. Also, I check out the ARRL repeater directory and program in some of the repeaters I may encounter on a long trip.

Do you have a smaller 2 meter all-mode? I've worked the RS-10 satelite when mobile; I listened to the downlink on 29 mhz using a CB antenna, and used just ten watts of 2 meter SSB into a 19" 2 meter mag mount antenna to work the uplink.

While in grad school, I used #30 wire thrown down the side of the building (10th flr) into a tree (about 60-90 ft total length). I replaced it OFTEn, but #30 was so cheap, it was worth it. It was hit by birds (saw it happen) and usually broken, but never found any dead ones on the ground.

Worked great, even on QRP. At a distance of over 15 feet, it is invisible, unless you get the light just right!

Try it! Can't hurt!

Fair enough. It's mostly these two:

- long range shooting

- racing, when I can get/afford track time

Believe me, I've had to stand up for these in the face of much abuse from
some people.

I apologize if my original inquiry into contesting came across to others as
griping. Being a very new Tech+, I just didn't understand it and was
looking for the "hook" that got people into contesting. What I found out
was what I should've known already: it's different for everyone. I appreciate
the email and personal anecdotes, which were very informative.

The most appealing and unexpected thing I found out about, was using contesting
as a way to test the efficiency of one's station. Also, I think I would
certainly listen to a contest as a way to improve my CW speed and ability to
recognize call signs quickly.

Thanks for the feedback, everyone.

I wonder if this paper you have is of current vintage. I would like to know of any FCC proposals to reinstate the old separate repeater callsign policy. (probably make us all pay $70/10 years too- eeech!!)

FYI the MACC is the largest (geographically at least) body that coordinates amateur repeaters. While like many other organizations they pull a few bone-head moves (like the current drive to 1.7Mhz split on 6meters), I find the paper that emminates forth is usually accurate and thoughtful.

So if you can give me a title of this paper, or more exacting wording- I'll check with someone on the accuracy/content of it.

BTW- one way to check the age of the paper is the list of states belonging to MACC, the group has expanded a lot in recent years. I think the list is now: Iowa, Illinois, U.P. of Michigan, Wisconsin, Minn., N.Dakota, S.Dakota, Nebraska, Kansas, Missouri, Arkansas, Colorado, Western Washington (I know- what about East), Indiana, Ohio, Wyoming, Oklahoma, Montana.

Tnx es 73

I'm looking for any Motorola GP300 Service manuals (16 Channel Version, UHF Wideband) as well as any information regarding paging capabilities between two GP300s. Can I, for example, us QuickCall or whatever it's called to turn on my partner's radio? Can Burst tones be used to do this? I know the Ritron Patriots are capable of this QuickCall style paging, but is the GP300?

VK2 DIV. PRESIDENT'S MESSAGE

This is Michael Corbin VK2PFQ.

Another week of intense lobbying on these amateur licence fees. I hope by now everyone has got around to recycling that letter to the Senators. Vicki Bourne, the Democrat Whip, must be the most popular person in Australia at the moment. If you have not written yet, do so today. We need to get all the help we can on this matter.

Remember the Lower House debate will continue this week. If you're in a position to listen to the ABC direct live broadcast, it might prove very interesting.

You'll recall last week I read two more speeches from the last round of debate. I did intend to read more this week, indeed Richard, VK2SKY went to a great deal of trouble to precie them, so that I could read them this week. I have decided against this as I have something else to read.

However, don't despair, the whole text of the Parliamentary Lower House Debate is on packet. Read it there if you can.

This week I received a letter from Jim Rowe, the Managing Editor of Electronics Australia. Jim has tried to set the record straight by writing to Ms.Henzell, the member for Capricornia, who quoted Jim's article in the Parliament. Now obviously Ms. Henzell does not read Electronics Australia....Nor is M/s Henzell an expert on Amateur Radio, so the question is, who supplied her with this information??? I believe that the person or persons or indeed the organisation who wrote her speech to the Parliament, was or were quite aware that the information in Jim's article was flawed. Therefore, is Ms Henzell guilty of misleading Parliament???? I'll leave that to the Opposition to decide next week.

Jim Rowe has supplied me with a letter he wrote to Ms.Henzell correcting his mistakes. The question is..... will the Honourable Ms. Henzell retract the statements made in the Parliament.

In an effort to bring Ms. Henzell to account, whilst speaking with Jim Rowe I suggested he write to Senator Alston, the Shadow Minister, to make him aware of the true facts. Jim said he was only too happy to do this and has faxed me a copy of his letter. As an added bonus, he has also given me a copy of his "apology"

in inverted commas, to Amateurs. I'd like to share these letters with you.

Mr. Michael Corbin VK2PFQ
President, NSW Division
Wireless Institute of Australia

Dear Mr. Corbin

As you are no doubt aware, I attempted to discuss the SMA/licence fee rise issue in my Editorial Viewpoint column, in the March issue. Although it was not my intention to do so, this has upset quite a few amateurs and produced quite a volume of "hate mail" - some of which is quite nasty and does very little for the image of amateur radio. I gather that I've also been "flamed" on the packet radio network, along with various SMA people and politicians (I'm told that the SMA has shown many of the nastier packet messages to the Government, which also hasn't done much to improve the image of radio amateurs...)

You may like to know, however, that when I discovered that I'd made some factual errors in the March editorial, I did seek to correct them. The April issue had already been printed, so I have corrected the errors and apologised for them in the forthcoming May editorial. I'm also proposing to discuss the matter further in the June issue's "Forum" column -- in a somewhat calmer and more objective fashion than many of my correspondents.

Many critics have made me aware of the fact that parts of my editorial were quoted in Parliament, by the Member for Capricornia. As the debate regarding the SMA and fees is due to be resumed before my corrections will be published in EA, I therefore took the step of sending a letter to the Member for Capricornia, advising of the errors I had made (and also supporting the idea that as amateur radio plays a significant role in fostering technological innovation, it deserves special treatment). A copy of this letter follows, for your interest; you'll note, I hope, that it was sent on March 13th -- by both fax and mail."

Ms. Marjorie M. Henzell, MP,
Member for Capricornia,
P.O. Box 1889,
ROCKHAMPTON, QLD 4700
(fax 079 22 7993)

Dear Ms. Henzell,

I must confess that I was not able to listen to your speech in the House of Representatives last Thursday, nor have I seen a transcript of it as yet. However I'm told that in the speech, you quoted from an editorial comment I made in the March issue of this magazine, on the subject of amateur radio licence fees.

While this is flattering, at the same time it's also rather embarrassing, because I have since discovered that in this editorial I made some inadvertent errors of fact:

1.
In writing that Amateur licence fees had not risen for about 10 years, I was wrong. In fact, they have risen from $23 pa to $37 pa over the period from 1986 to early 1995.

2.
In writing that there had been 'prolonged negotiations' between the SMA and the Wireless Institute of Australia, it appears that I was also wrong. Further enquires have suggested that although WIA members were indeed present at various meetings during 1994 when fee increases were mooted, for various reasons little in the way of real negotiations seems to have taken place until early in 1995.

I am seeking to correct the above errors in a follow-up editorial on the same subject, which I have just written for our May issue (due for publication in late April). However in view of the delay in publishing the correction, I thought it would be desirable to send you this information by letter and fax.

Please accept my sincere apologies for any embarrassment that these inadvertent errors may have caused you.

By the way, although radio amateurs occupy a significant amount of space in the electromagnetic spectrum, I do believe that the amateur bands can be considered as internationally sanctioned 'spectrum reserves', where interested people can engage in technical innovation and experimentation in the areas of radio, data and satellite communications, and information processing. This kind of activity has been shown to play an important role in fostering the development of new technologies, while at the same time costing the general public very little -- as amateurs basically fund their own activities.

If Australia does wish to maintain and enhance its position as the 'clever country', one can therefore argue that it should be doing all it can to encourage such activity, rather than discourage it. Perhaps Australia's best interests would therefore be served by either abolishing, or at least reducing the level of amateur radio licence fees, rather than increasing them at all.

I hope these further thoughts are of interest to you, Ms Henzell, and again I trust that the errors in my earlier comments do not cause you embarrassment.

Yours sincerely,

signed Jim Rowe.

March 23, 1995

Senator Richard Alston
Parliament House,
CANBERRA, ACT.
(fax 062 77 3308)

Dear Senator Alston,

I'm contacting you to bring to your attention some information which you may find of interest regarding the debate which took place on March 9, 1995 in the House of Representatives, regarding the Spectrum Management Authority, the Radio communications (transmitter Licence Tax) Amendment Bill 1994 and proposed licence fee rises for Australia's radio amateurs.

During the debate, which I understand will be resumed in the near future, the Member for Capricornia Ms Marjorie Henzell MP quoted from an editorial I wrote for our March 1995 issue, commenting on the proposed fee rises. While in normal circumstances this may have been flattering, in this case it is quite embarrassing, because I have since discovered that in this editorial I made some inadvertent errors of fact (one of which was quoted by Ms Henzell):

1.
In writing that amateur licence fees had not risen for about 10 years, I was wrong. In fact, they have risen from $23 pa to $37 pa over the period from 1986 to early 1995.

2.
In writing that there had been 'prolonged negotiations' between the SMA and the Wireless Institute of Australia, it appears that I was also wrong. Further enquires have suggested that although WIA members were indeed present at various meetings during 1994 when fee increases were mooted, for various reasons little in the way of real negotiation seems to have taken place until early in 1995.

I have written to the Member for Capricornia to acquaint her with these inadvertent errors, and apologise for any embarrassment that I may have caused her. I will also be correcting the errors in a follow-up editorial on the same subject, which I have written for our May issue (due for publication in late April). However in view of the delay in publishing the correction, I thought that in the interests of fair play I should also provide you with this information, in case the matter should become the subject of further discussion in either House, before my correction can be published.

Before closing, Senator, perhaps you will allow me to expand briefly on a point I made in the original editorial, which does not appear to have been quoted by the honourable Member. This is that although I suggested that radio amateurs might be advised to "grin and bear" any proposed increase in licence fees, I also

believe that there's a good case for arguing that amateur licence fees should be reduced -- or even abolished -- rather than increased at all.

Although radio amateurs do 'occupy' a significant amount of space in the electromagnetic spectrum, I believe that the amateur bands can be considered as internationally sanctioned 'spectrum reserves', where interested people can engage in technical innovation and experimentation in the areas of radio, data and satellite communications, and information processing. This kind of activity has been shown to play an important role in fostering the development of new technologies, while at the same time costing the general public very little -- because amateurs basically fund their own activities.

If Australia does wish to maintain and enhance its position as the 'clever country', one can therefore argue that it should be doing all it can to encourage such activity, rather than discourage it. Perhaps Australia's best interests would therefore be served by either abolishing, or at least reducing the level of amateur radio licence fees, rather than increasing them at all.

I hope these further thoughts are of interest to you, Senator Alston. I'm also enclosing a copy of the editorial to appear in the May issue of the magazine, with its corrections, in the hope that this may also be of interest.

Yours sincerely

signed Jim Rowe.

EDITORIAL VIEWPOINT

AMATEUR LICENCE FEES:
the battle continues...

In the March issue, you may recall, I commented here on the proposal by the Spectrum Management Authority to increase radio amateur licence fees, as part of its overhaul of licensing for all spectrum users. Despite my attempts to be as objective and as fair as possible, I managed to upset quite a few amateurs in the process.

Mind you, I did make a couple of unfortunate errors of fact, as quite a few people were quick to point out (some of them not very nicely!) One was to claim that amateur licence fees hadn't risen for about 10 years; this is certainly wrong, as they've risen from $23 pa in 1986 to &37 pa in 1995. My apologies for this inadvertent mistake -- I should have checked, rather than relying on memory.

My other error, it seems, was to suggest that there had been 'prolonged negotiations' between the SMA and representatives of

the WIA, which had resulted in the whittling down of the proposed new fees from an original 'formula' figure of around $500 down to a figure of around $70. I've since discovered that to describe the negotiations as 'prolonged' was wrong; in fact they seem to have been relatively short, and unfortunately delayed. In retrospect, 'last minute negotiations' would have been a more appropriate description.

Although all kinds of theories seem to have been circulating in amateur radio circles regarding the reasons for these negotiations having been delayed and curtailed, I believe it's not in the best interests of amateur radio to explore this further here. Suffice it to say that from what I've been able to learn, the WIA itself must shoulder a good deal of the responsibility for what happened.

In any case, events have moved on. Once it became clear that the proposed fees could be as high as $71, a ground swell of protest built up among amateurs as a whole, who sent large numbers of letters to their MP's as well as petitions to the Minister. As I write, this plus pressure from the WIA seems to have resulted in the Government deciding to reduce all of the new amateur licence fees to a flat rate of $51, corresponding to around half of the SMA's proposed rises.

Not surprisingly, many amateurs are still not satisfied. Now that the whole issue of fees has been raised again, they're determined to apply renewed pressure for abolition of amateur licence fees altogether. And that's their right, of course.

As I said here in March, I do believe that you could build a good case for abolishing amateur licence fees. Regardless of how much total spectrum space is currently allocated to amateurs, and quite apart from the valuable roles played by amateurs in times of natural disaster, one can indeed argue that the amateur bands are in the nature of internationally sanctioned 'spectrum parks', which allow innovators of all ages to gain important practical experience in radio, data and satellite communications, and data processing technology -- at little or no real cost to the public. Encouraging innovation of this kind is surely something that Australia must do, if we are to maintain our status as the 'clever country'...

The NSW Division of the WIA has been active in promoting this view, as have others in the amateur radio movement. I wish them every success.

Jim Rowe

Well there you have it. I see no reason not to accept Jim Rowe's explanation / apology. He's done his bit, Ms. Henzell has yet to do her bit......Hmmmmmm! If you are expecting a retraction from the Government benches.... I don't suggest you hold your breath.

See you next week.

Correspondence course help wanted

Correspondence Course volunteer wanted

The NSW Division used to conduct a correspondence course for aspiring amateur radio operators ..... yes ..... used to conduct!!!

In the upheaval which has taken place over the past two years the person who was responsible for this stopped correcting the papers of the current students some seven months back.......then he resigned.

So we have a problem......people have paid around $200 for a service but they no longer receive this service.

Solution.....we are in need of someone to correct these papers thus saving this Division both a loss of income not to mention a loss of face.

So....if you feel that you fill the bill and are willing to help please call the President Michael Corbin on 626 9288 urgently!!!!

This has nothing to do with the "politics" of the day.......it's all about helping to educate those people who for whatever reason be it distance or disbility want to obtain their amateur radio licence.

Can you help???

Urunga help needed

Help needed

The Urunga Radio Convention Committee has requested that the Division supply a selection of books from the WIA bookshop for sale at their coming Convention which is set down for the Easter weekend.

Well what an excellent idea!!!! The only trouble is that none of the Council will be attending this get together... At least that's how it seems at the moment. CAN YOU HELP????

What does this mean? All we need is for someone to take up a couple of boxes of books .... Hopefully you won't have to bring them back as they will all have been sold HI! HI! .... And of course you will be required to bring back all the money. Does this mean you will have to staff a stall... The answer is NO... These books will sell themselves.

If you can help please contact Peter Kloppenburg at the office during office hours on 689 2417 or ring the President Michael Corbin on 626 9288 anytime....

This request has come from Merv. Savins VK2DMS..... We thank him for his interest. The rest is up to you the listeners.

Broadcast roster

April to June Broadcast Roster

The April to June roster is to be finalized today.

Would all broadcast team members who have not already done so, please contact Steve VK2QZ with their unavailable dates so that the roster can be posted on Tuesday.

If anyone listening would like to join the Broadcast Team please contact the Parramatta office on 689-2417 or Steve VK1QZ (QTHR).

No special skills are required, nor is an amateur licence, although we are in need of a few more full-call amateurs and people with good 'news-reading' voices.

--Steve Pullen VK2QZ, Broadcast Roster Co-ordinator

News briefs

News Briefs

For no particular reason, we feel the urge to pass on the information from The Sydney Morning Herald, which tells us that there are only 2,000 days to go to the start of the Sydney 2000 Olympics...

Russian cosmonaut Valery Polyakov returned to earth this week, having set the world record for endurance in space. After a total of 438 days on board the Mir space station, Polyakov returned to earth in a Soyuz TM-20, landing 32 km north-east of Arkalyk in Kazakhstan. Polyakov boarded Mir on 8 January last year, and his feat of endurance surpasses the previous record of 366 days set in 1988.

We don't know at this stage who has replaced Polyakov, but we're sure that Amateur Radio will continue to operate on board the spacecraft.

EMERGENCY CENTRE TO LINK AMATEUR RADIO TO INTERNET

Plans for what organisers call "the world s first public emergency communications centre" have been announced by a Coloradio Amateur. John Hart N0OCF, of Lakewood, Colorado, says he is starting the "E-COMM" communications centre as a non-profit organisation to link Amateur Radio with the Internet worldwide, to expedite emergency communications among disaster victims, family, and friends.

"The concept is simple," Hart said. "If you are in a city where disaster strikes, or if you are experiencing an individual emergency, E-COMM will pass a health and welfare message, any time day or night, to your family and friends, wherever they reside, even if phones are down and power is out..."

Getting a mssage to E-COMM is accomplished in cooperation with ARES, the Amateur Radio Emergency Service. The new emergency centre plans to form a strategic alliance with ARES operators and groups. Those operators and groups are expected to be listed in city directories and other databases.

The new communications centre, to be built in Lakewood Colorado, will include HF, VHF, satellite, packet, an e-mail server, an FTP server, and a World-Wide Web server all connected to the Internet.

--from "73" magazine, sent to us by John Robinson VK2XY

SCIENTOLOGISTS TRY TO SUE INTERNET

The Church of Scientology this week was attempting to sue a Los Angeles Bulletin Boad System, and its Internet service providers NetCom Online Communication Services of San Jose, because of the actions of one of its subscribers.

In a preliminary hearing, the Scientologists claimed that the service providers were responsible for the behaviour of one of their subscribers, who posted copyrighted material to the net without permission. The person in question, former Scientology minister Dennis Erlich, posted the material as part of an invective commentary on the church and its teachings.

However, the court decided not to prosecute NetCom, on the grounds that they were not responsible for carrying the information. It did, however, prohibit Mr. Erlich from posting further material until the matter came to trial.

The director of the US-based organisation, Computer Professionals for Social Responsibility, commented that it is illegal to use the postal service to defraud people, just as it is illegal to use telephone lines to slander them. In these cases, she explained, neither the post office nor the telephone company can be held responsible. By this reasoning, none of the service providers could be held responsible for the actions of its users.

One would hope that this logic flows on to the Amateur Radio world, where packet BBS sysops are still threatened by legal action if illegal traffic passes through their systems. Stay tuned...

"News Briefs" looks at news items from the mainstream media that are of interest to radio enthusiasts. Thanks this week go to "The Australian" and "73 Amateur Radio Today". If your local or

regional paper runs an item of interest to Radio Amateurs, please send a clipping to the Divisional office

--Richard Murnane VK2SKY

WICEN news

WICEN News

Last weekend was the Bungonia Cave Rescue exercise, and we thank all those who took part. Packet radio was used for the first time, and the onlookers were suitably impressed with messages appearing on the printer almost as quickly as they were being spoken. All WICEN members are reminded that the end of the financial year is Friday 31st March, and renewals are due.

Events in April include the VRA Mid-Year Conference at Wooli (between Coffs Harbour and Grafton) on the weekend of 1st-2nd April; the Forster Triathlon on 9th April, and is commanded by Michael VK2CMW and Darryl VK2DAZ; the Hunter Anzac March, commanded by John VK2JRC is on 23rd April; and the Oberon Car Rally is on 29th April, with about 20 people required; please contact Alan VK2YYJ via packet radio at VK2CZR, or at work on (02) 839-1388.

Looking ahead to May, there is the Hawkesbury Bridge to Bridge Speedboat Race on 7th May, for which David VK2KLX is looking for volunteers; the annual Goulburn Training Seminar on the weekend of 13-14th May, along with the Rathmines Fun Run; the Wyong Rally on the weekend of 20th-21st May; and the Variety Club of Australia Newcastle Bash on 23rd-26th May, co-ordinated by Maurie VK2CD.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Technical aid for the disabled

TECHNICAL AID FOR THE DISABLED

In our letters to the SMA and the politicians, many of us have highlighted the ability we Radio Amateurs have to serve the community. Now, here's yet another opportunity for us to do just that.

Technical Aid for the Disabled is an organisation which operates in all capital cities and many regional centres around Australia. TAD's function is to improve the lives of those who live with disabilities. To do this, it calls on the skills and energy of technical volunteers, who design and construct all kinds of equipment for the special needs of the disabled. In New South Wales, TAD undertakes around one thousand projects each year.

Though they come from many diverse backgrounds, TAD's volunteers all have one thing in common: they gain a sense of satisfaction from using their creative and technical skills to benefit others.

Right now, TAD is looking for volunteers to make special equipment and to give computer support to disabled users. If you think you have what it takes to be a TAD technical volunteer, then you can contact Technical Aid for the Disabled by writing to PO Box 108, Ryde NSW 2112, or by phoning (02) 808-2022. Or, you can fax them on (02) 809-7670.

IPS report

IPS WEEKLY REPORT

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Club news: Blue Mountains

Jo Harris, the WIA Historian is the guest speaker at the next meeting of the Blue Mountains Amateur Radio Club.

Jo is coming to speak to us about the history of the club's callsign, VK2HZ. We are also hoping to persuade her to talk about her "pet" subject, the first CW message sent from the UK to Australia in 1918 and her group's annual celebration of this event on the 22nd September.

Come along and meet Jo, you might get a chance to ask her about the history of your call.

All are welcome to the Blue Mountains Amateur Radio Club. The meeting commences at 8.00pm on Friday, 7th April, 1995 in the club room at Springwood High School, corner Chapman Parade and Grose Road, Faulconbridge; enter from Chapman Parade.

You don't have to be an amateur! If you have an interest in radio or its history - come and meet Jo and us.

The usual coffee, tea and scones will be served.

Publicity Officer, Alex, VK2ICL

Club news: VHF to SHF Group

From the VHF/SHF DX Interest Group

Just a reminder for you, not to forget the next meeting of the group to be held at the WIA Wigram Street premises.

Date: 28th March 1995
Starting at 7:30

Test gear will be available to test VHF preamplifiers.

The SSB activity night which is still being held every Tuesday evening 20:00 to 21:00 AEST -- it is well patronised but certainly would like to se some new stations so let's see you there and join in the fun.

--Richard Soulie VK2ARS Publicity Co-ordinator

Club news: RAOTC

Radio Amateurs Old Timers Club

Members and friends of the Radio Amateurs Old Timers Club are reminded that the next series of broadcasts and call backs will take place on Monday April 3.

Times and frequencies will be as follows:

10 AM. MELBOURNE TIME (2400 ZULU)
145.700 MegaHertz FM

AND
7.060 Megahertz LSB
3650 MegaHertz LSB

11 AM. MELBOURNE TIME (0100 HOURS ZULU)
14.150 MegaHertz USB beaming NORTH
from Melbourne

12 NOON MELBOURNE TIME (0200 HOURS ZULU)
14.150 MegaHertz USB beaming WEST
from Melbourne

8.30 PM MELBOURNE TIME (1030 HOURS ZULU)
3650 MegaHertz For the benefit of members
of friends who, for whatever
reason are unable to hear any
of the morning transmissions.

Callbacks will follow all six transmissions.
News for inclusion in the club broadcasts will be welcomed by Club Secretary Arthur Evans VK3VQ or Allan Doble VK3AMD both of whom are OK in any call book.

de Arthur Evans VK3VQ

Club news: Wahroonga

Wahroonga Amateur Historical Radio Association

On this day, 26th March 1930 at 1500 hours EST, 2800 coloured lights were switched on in the Sydney Town Hall to officially open the Radio and Electrical Exhibition. The radio signal that activated the switch was transmitted by Marconi from his yacht "Elettra" moored in Genoa harbour, Italy.

1995 marks the centenary of Marconi's first successful wireless experiment, which took place in his birth place, near Bologna in Italy. Celebrations are taking place this year to mark this event.

International Marconi day is held each year on the nearest Saturday to his birthday, 25th April. This year IMD is Saturday 22nd April. The Wahroonga Amateur Historical Association (WAHRA) using the callsign VK2IMD will be one of the world-wide authorised IMD stations and will be on air for the 24 hours UTC on that date.

Although Marconi never visited Australia, Wahroonga was the place where the first message from the UK to Australia was sent by him in 1918 from near Carnarvon in Wales nd which was received by Ernest Fisk. It is because of this link that WAHRA was invited to participate in the annual celebrations.

This will be the second year that VK2IMD has been involved with this special event as the only Australian station.

Further information re frequencies will be broadcast nearer to the event.

submitted by Jo. Harris VK2KAA, President WAHRA

Club news: AATC

Australian Amateur Television Club Inc.

The next meeting of the A.A.T.C. Inc. will be held on as usual the 2nd Sunday of the month - April 9th 1995 to be held at Radio House in Wigram St - Parramatta - 1.00 pm.

Note this is a special meeting to propose changes to the constitution please be there as we need the numbers for effective policy.

Technical items announced next week

Anyone interested in ATV is welcome to attend for general information about ATV and the waht is required to be on air.

Special announcement - committee meeting at Peter VK2YPU on Monday night (tomorrow night) - for further info re location ring Bob on 587-3491 on Monday.

For more information about ATV - contact the Publicity Officer on (02) 587-3491 between 4.00 and 10.00 pm Monday to Fridays.

AATC Inc. Publicity Officer Bob Barnes VJ2R.

Urunga Radio Convention

Urunga Radio Convention

Every Easter Saturday and Sunday the Urunga Radio Convention happens. Whether there is fire, flood or plague, a group of Amateur Radio enthusiasts still gather at Urunga.

Fox hunting leads the action at the convention as it did in the old days. It has become more sophisticated. We hide them better, they find them sooner.

There is still a big interest in disposals, and although Amateurs hate to part with their left-overs, a lot of second-hand trading takes place. This year there will be trade displays and a WICEN display. There will be a selection of WIA books for sale or order.

Quizzes, competitions and lucky door prizes are innovations from the 60's and 70's. There will be something for everyone.

There is a loungeroom and amenities attached to the hall now, and tea and coffee are still available all day. The premises are disability acessible.

Urunga is at the mouth of the Bellinger River and offers a wide variety of aquatic activities, as well as bowling, golf and tennis. Coffs Harbour is about 30 minutes north, the Dorrigo National Park is about 30 minutes west.

Accommodation can be booked by phoning the Holiday Coast Turist office on 008 025650.

For further information conatct Ken VK2DGT, Arnold VK2ADA, Brian VK2ZCQ, Merv VK2DMS, all QTHR.

--de Merv VK2DMS

Coming events

COMING EVENTS

Now, a summary of upcoming events of interest to members and other Radio Amateurs and Shortwave Listeners...

Proposed new Amateur licence fees were due to come into effect on the first of March, but have been delayed until April -- so please keep writing!

Divisional Trash and Treasure Sale . . . . . Today
Summerland ARC exam applications close . . . . . Today
Daylight Saving Time ends in VK3, VK5, and VK7. ended this morning
Fisher s Ghost ARC packet night. . . . . Tuesday
VHF to SHF DX Interest Group meeting at Parramatta . . . . Tuesday
Great Lakes ARC members' meeting . . . . . .Friday
St George ARS Annual Alan Pettiford Memorial Auction. . .Saturday
Divisional Examinations . . . . . .next Sunday
St George ARS meeting . . . . . .5 April
Hunter Branch Radio group meeting . . . . . .7 April
Forster Triathlon (WICEN)--Michael VK2CMW & Darryl VK2DAZ).9 April
Summerland ARC exams. . . . . .9 April
Liverpool & District Amateur Radio Club meeting . . . . . 12 April
46th Annual Urunga Radio Convention . . . . . .15-16 April
Easter Monday public holiday. . . . . 17 April
Deadline for comment on SMA paper "A New Outlook" . . . . 21 April

If you have an event you'd like publicised on the weekly broadcast, then please send details to the Divisional Broadcast Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, by fax on (02) 626-6066.

From: w9sz@prairienet.org
Message-ID: <3lf0cf$5ij@vixen.cso.uiuc.edu>
Source record: 249528

In a previous article, greg@core.rose.hp.com (Greg Dolkas) says:

>
>Just a curiosity question for the net that seems to have stumped the band here.
>
>In California, the Advanced pool of calls is in the latter half of the alphabet
>with the KO6 prefix. What happens when they get to KO6ZZ? KP6AA? I know
>KP4 is already used (Puerto Rico), and I think there are some others.
>
>Will they skip the KP's and go to KQ? Are all the KP4's 2x3 calls, so a KP4xx
>2x2 call will still be unique? Will CA move on to KP6, but 4-land skip it and
>go right to KQ4AA?
>
>The question came up as I was looking to see what sort of call I'd get when I
>upgrade.
>
>Greg KD6KGW/AA
>

Well, they didn't skip the KC6's (KC6X2 calls are currently assigned to
Belau (Palau)). This has led to some confusion!

I'll bet they do assign KP6 calls!

Message-ID: <3lf1f7$1lq@charm.magnus.acs.ohio-state.edu>
Source record: 249530

I just purchased a new Kenwood TM-733A, and before I attempt to install it, I would like to do something a little 'different' than some people. Since I own a 1994 Chevrolet Cavalier, there are few good places in the car to mount the radio. Therefore, I purchased the remote mounting cable, and plan to mount the main body in the trunk, and mount the control head and microphone around the dashboard.

I have this problem with living with excess 'loose' wiring and having to mount excess amounts of speakers in the car. I merely consider that to be somewhat 'tacky' to need to explain such things to business partners and the like. In short, I want to use as little extra stuff in this installation as possible.

One problem I have found, is the speakers. The TM-733A has the option for output for one speaker to be for the main band, and the other to be for the sub-band.

Since I already have two speakers in the front, I would like to somehow interface the output from the TM-733 with the output from my Car radio. This way, I can listen to the car radio with the mobile rig turned down. If something happens where I am needed on the mobile rig, I could then turn down (or off) the car's radio and turn up the mobile rig.

If anyone knows how to achieve this, please let me know.

Thanks and 73 de Bob, N8MMR

Greetings QRP'ers,

Late last year I seem to recall that those on the qrp-l mailing list had a fox hunt schedule. In addition to the fox hunt, this also served as a means for fellow QRP'ers to get together.

Due to mail volume I can't subscribe to the qrp-l mailing list, but if there is a current schedule it would be nice to have it posted so that fellow QRP afficionados could get together.

Thanks,

-Dave, KC7GQQ

4442. Re: How much power is enough?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-30 00:00:00 UTC
From: turner@safety.ics.uci.edu
Message-ID: <3lf3p4$9j6@safety.ics.uci.edu>
Source record: 249532

A very broad question, and one you can only answer with experience. You will probably get strong arguments from both sides, but I advise that you keep the amp for a month and have it for when you "need it" and see how often you actually need it. I like QRP, but occasionally run 100 watts, and have 600 watts out at my disposal. I use the amp about once very 3 or 4 months during a net when the jammers get crazy. Other than that, I don't "need" the amp, I can get through fine with way under 100 watts.

Depends on your antenna, your location, your temperment, and what you want out of radio. If you like to hone your skills and have a little bit of patience, you will probably not need the amp at all, hi hi.

>and 1500 watts. 2 Meters is too noisy, so you need huge
>antennas to compensate. The higher bands still need a bit
>of experience and test equipment, at least for EME work.

While the above is generally correct, *many* 2-meter stations
using only 100 watts and a single yagi (13B2 or bigger) are able
to make "horizon" EME contacts with the "big guns" during the EME
contests. In fact, any serious EMEer will *encourage* you to try
even if you only have the "peanut whistle" I described; after all,
they want the new grids! If you're patient enough to wait out
the Faraday rotation, you can work a number of countries via EME
with a "basic" rig.

2-meter terrestrial weak-signal work (predominently SSB congregates
at 144.2; meteor scatter congregates at 144.110. The CW portion is,
I believe, 144.0 to 144.1, not 144.05, and yes, the EMEers will congregate
below that frequency.

If you're interested in VHF/UHF weak-signal work, subcribe to the
N.E.W.S. (NorthEast Weak Signal) Group. I can send you the address
(don't have it here at work). The membership is a veritable "Who's
Who" of EME and VHF/UHF experts. You can learn a *lot* from those
guys (and for only ten bucks a year!).

Do not even think of criticizing Radio Shack!!!
They are perfect in every way. If you insist upon portraying
any of their offerings or business practices as less than
perfection you will be punished. You have been warned.

Perhaps I should have posted this through the anonymous server.
The last time I was critical of Radio Shack a store manager took
it upon himself to post information about my credit card account.

For the record I do have experience with their equipment. Some of
it is OK if a little behind the current state of the art. I had an
HTX-202, sold it; had a few scanners, sold most of them; never bought
a HTX-100 since the Uniden 2600 had more features. Have kept the Pro-43,
darn good scanner even if the audio is wanting.

Will I do business with them again? I don't think so. Between the sales
droids and the attitude that flares up on the net and Compuserve from
the Tandy connected I conclude there must be an outfit that wants my
business more.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 30/2330Z MARCH 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 30 MARCH AND FORECAST FOR 31 MARCH - 02 APRIL

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 80/20

GOES satellite data for 29 Mar
Daily Proton Fluence >1 MeV: 4.5E+05
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 2.9E+08 (moderate)
X-ray background: A7.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
31 Mar 01 Apr 02 Apr
Activity Low Low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 31 Mar: 80/20

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: mostly quiet to unsettled, brief
activity observed 12-15UT.

Estimated Indices : A K Observed A Index 29 Mar
Learmonth 9 3212 4211
Fredericksburg 9 19
Planetary 10 19

Observed Kp for 29 Mar: 3544 4223
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
31 Mar 15 Unsettled
01 Apr 20 Active
02 Apr 10 Quiet to unsettled
COMMENT: Active levels expected on April 1 due to coronal hole.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
30 Mar normal normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
31 Mar normal normal fair
01 Apr normal fair poor
02 Apr normal fair poor-fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T index MUFs at Sydney
30 Mar 23 near predicted monthly values

Predicted Monthly T index for March: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T index MUFs
31 Mar 20 Near predicted monthly values
01 Apr 15 Near predicted monthly values
02 Apr 0 About 10% below predicted monthly values
COMMENT: MUFs at Townsville were depressed by up to 15-25% during
daylight hours yesterday. Near predicted values were observed during
local night at Townsville. MUFs at Hobart were depressed 15% for most
of the UT day, with spread F observed during local night. Degraded
HF comms expected 1-2 April.

ARRL Bulletin 30 ARLB030
From ARRL Headquarters
Newington CT March 30, 1995
To all radio amateurs

SB QST ARL ARLB030
ARLB030 Comments for conference

The ARRL has commented to the FCC on four topics of interest to amateurs in preparation for the International Telecommunication Union's World Radio Conference (WRC-95) scheduled for later this year.

The League said that it had already regularly opposed even the suggestion of the use of present amateur bands between 2300 and 2400 MHz for the mobile satellite service (MSS), and that it was apparent that any additional spectrum requirements for MSS could be satisfied in bands outside those allocated to the Amateur service.

On the matter of the 40-meter band, the League said that, although an important goal of both the ARRL and the International Amateur Radio Union (IARU) is the eventual creation of a worldwide allocation of 300 kHz, it believes the matter should not be on a WRC agenda until 2001 or later. The League said that considering this any sooner would likely defeat the purpose of the exercise.

(At the 1992 World Administrative Radio Conference the United States proposed realignment of the bands around 7 MHz, specifically to provide amateurs a worldwide allocation of 6900 to 7200 kHz. While this realignment did not take place, a recommendation from that conference called for a future conference to take up the matter.)

On the idea of an international amateur radio permit, the League cited ongoing work by the IARU and in particular the European community, and then suggested an agenda item for the 1999 WRC to read ''(Resolved) to consider the adoption of an international amateur radio permit to allow international roaming by duly licensed amateurs among signatory countries.''

Finally, the ARRL took issue with a claim (in this, the FCC's second notice of inquiry in IC Docket 94-31), that requirements for new

single-sideband HF broadcasting stations should be tempered by a lack of available HF SSB receivers. The League said that the issue is not whether SSB should be required for HF broadcast, but rather when double-sideband emissions should be terminated.

Pointing out that amateurs and most other radio services converted to SSB many years ago, the ARRL said ''there should be no further foot-dragging in the SSB conversion of the HF broadcasting service.''

ARLB031 2 amateur satellites lost

ZCZC AG97
QST de W1AW
ARRL Bulletin 31 ARLB031
From ARRL Headquarters
Newington CT March 30, 1995
To all radio amateurs

SB QST ARL ARLB031
ARLB031 2 amateur satellites lost

Two amateur satellites were lost when their launch vehicle exploded. The Israeli-built Gurwin-1 TechSAT and the Mexican UNAMSAT were part of the payload of a Russian SS-25 rocket originally built to carry ballistic missiles and recently converted to launch satellites. The Reuters news agency said the rocket, which was launched from Russia's Plesetsk cosmodrome, came down in the Russian Far East, in the Sea of Okhotsk, on March 28.

Both satellites were designed for packet radio repeater use. Gurwin-1 TechSAT was built at the Technion-Israel Institute of Technology in Haifa as a 9600-bit/s packet store-and-forward satellite. UNAMSAT was assembled by students at the Universidad Nacional Autonoma de Mexico (UNAM) in Mexico City. In addition to packet store-and-forward operation at 1200 bits per second, UNAMSAT carried a unique ''meteor radar'' experiment. (See January 1993 QST, page 97, for more information on UNAMSAT.)

Reuters noted that the 115-pound Gurwin-1 TechSAT was a prototype for communication satellites and ''was to have been used by amateur radio enthusiasts.'' Reuters did not mention UNAMSAT. Two Russian satellites also were lost in the failed launch.

In November 1993 the first test launch of a converted SS-25 was successful, but with a lighter payload. Radio amateurs, particularly in Europe, have hoped that the Russian rockets will provide an inexpensive way to launch Amateur Radio satellites.

DX Bulletin 15 ARLD015
From ARRL Headquarters
Newington CT March 30, 1995
To all radio amateurs

SB DX ARL ARLD015
ARLD015 DX news

This week's bulletin was made possible with information provided by Bob, WB2CJL, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks to all.

SPRATLY. A group of Japanese and Malaysian amateurs are on the air as 9M0A from Pulay Layang-Layang, the location of the 9M0S operation of May 1993. An early announcement of the DXpedition stated plans for CW, SSB, RTTY and perhaps even some SSTV. New England PacketCluster spots show them on 14002 kHz at 1547z and 14195 kHz between 1440 and 1615z. QSL via JA9AG. DU0K should be active from April 10 to 16 by a group of Philippine amateurs.

CONWAY REEF. Due to rough seas some equipment took an unplanned swim when one of the rubber rafts overturned. However, it has been reported that two of the three planned stations are on the air. Try 7085 kHz between 1100 and 1215z.

MAURITANIA. Listen for I2RLX, IT9AZS, IT9JNT and IT9PHY operating as 5T0AS April 1 to 20. Plans are for this DXpedition to be on all bands, CW and SSB. QSL via IT9AZS.

MALDIVE ISLANDS. Juergen, DL1IAI, has requested the call sign 8Q7AI for his April 12 to 27 stay on Kuredu Island. His hopes are to operate 160 through 20 meters. QSL via CBA.

SVALBARD. DF6JC is on the air operating the station of JW5E and signing JW/DF6JC. He has been on 14190 kHz between 1300 and 1315z. JW0C has been worked on 14190 kHz from 1423 to 1435z, and 14205 kHz at 1745z.

FRANZ JOSEF LAND. There has been some talk of operations from FJL coming to a close as the stations shuts down because of budgetary

reasons, though some stations continue to be active. R1FJL was worked on 14014 kHz at 2253z and RX1OX/FJL was on 14237 kHz at 0123z.

BELIZE. Don, ZF2VW and ex-DJ0IR, will sign V31VW April 10 to 24 from San Ignacio. Most activity will be on 17 and 12 meters, CW and SSB. Also check 14230, 21370 and 28410 kHz. QSL via the Vancouver Mountain Radio Club, PO Box 1622, Vancouver, WA 98668.

THIS WEEKEND ON THE RADIO. The Holyland DX Contest, sponsored by the Israel ARC, runs from 1800z April 1 to 1800z April 2. Exchange signal report and serial number beginning with 001.

The SP-DX Contest on CW, sponsored by the Polski Zwiazek Krotkofalowcow, runs from 1500z April 1 to 2300z April 2. Exchange six digit number consisting of RST and QSO number.

Check page 123 of March QST for more information on these operating events.

The EA WW RTTY Contest is a 24 hour contest that starts at 1600z April 1. We have no other info on this event, so listen on the air for exchange details.

We don't seem to have addressed the hard problem here, well, er, hard for those who don't contest....

Some hams don't contest. And they have just as much a right to get on and use the bands. They get on the frequencies, 75 or 40, to chat about their rigs or whatever they like, just before the contest starts. You know what happens. It doesn't matter how long they have been there, or how strong their signals are (or how weak), they will be squashed by the contesters, one after another, mostly quite shamelessly.

Now, this is at best merely impolite. At worst, it is deliberate interference, and it happens so darned much during any contest that is an embarassment to me. I do enjoy contests, I hate impolite operators who cannot give space to those who are not contesting.

I am always amazed (probably shouldn't be after all these years) to get on a 40 meter net clear frequency and have a contest start. Every 30 seconds someone comes up without asking whether the frequency is clear and just starts talking. They when asked to move by the loudest of the group, they make sure to finish the contact over top of us and then, if we are lucky, they move....only to be replaced by the same behavior some short time later. It is really awful.

When I operate a contest I very carefully check frequencies and try to avoid QRM'ing ongoing contacts, and I know many others that do it too.... but we don't seem to be in the majority.

Ok folks, I have made several phone calls to settle this dispute about taking ht's into area amusement parks, specifically the San Diego Zoo and Wild Animal Park, and Six Flags in Valencia, Ca. I have spoken with reps from the zoo, and 6 flags, and both have basically agreed to let ht's in the park. It seems that most folks are just paranoid that we will interfere with their freqs. I suggest that if you have trouble getting an ht in a park, ask to see the head of security, and very politely, and calmly explain that there is no way that the freqs you will be using would interfere with the freqs they will be using. Also offer to use ear or head phones. There should be no problem. Hope this helps.

CC>Has anyone ever considered a mobile beacon to raise some activity on
CC>VHF/UHF simplex frequencies when traveling? I usually have the
CC>radio on but grow tired of calling to see if anyone is out there.
CC>If there were a way to automatically check for activity and alert us
CC>when someone else is in range, there may be more activity on 146.52.
CC>The beacon could be as simple as a fast cw id at random intervals.
CC>The id would only get transmitted if nothing breaks the squelch for
CC>a programmable time. The delay would be to listen for ongoing QSO's
CC>and other beacons. The beacon could also copy the cw id and provide
CC>a display so the operator knows who is on the frequency.
CC>

My first reaction is "Wow", what a simple but great idea. Even
without the ID display, just the CW breaking your squelch would
be a start. A simple "QRZ?" would suffice if you missed the CW
callsign.

Being a ARRL-VE in Mass..... here's what I have found....

Generally 2-3 weeks seems to be the average turnaround.....
When you take your test, the people giving the test should give you an info sheet with everything you ever wanted to know about the procedures..... If you have any questions.... these are the people to ask.....

With the FCC having an 800 number to check on the progress of your license, they have eliminated most of the human factor from that end of it.... I've not called the number myself... I haven't had a need to.... But those I know have, have had good experience, and sometimes pleasant surprises....

Remember.... the VE team members.... be it ARRL, or W5YI are really the ones you should be asking.... they always have the latest (or should) info on what's going on there....

Welcome all new hams.......
Bryan, N1LLK, ARRL-VE

Both you guys are great! I concur 100% with original letter, and as much with reply. Its tough here in California too, with a bunch of old white men who just don't get it. I also turned the tables when I became club vice-pres in my first year of hamming. Many changes did not make many friends, but who cares, those who "get it" are with me all the way, and we and club are better for it.

Hey, who wants to be friends with those kind of people anyway. Leave them in your wake when you and those fired up people like you take off and have fun hamming.

I make it a policy to answer every time I here a new call on the air, especially if its a woman or a schoolchild. 73 you guys. Hang in there.

Alan --

The ARRL Repeater Directory lists 8 6m repeaters in the DC area, and 2 on 10m. Both have greater ranges than 2 meters, however, so you may find more in outlying areas (such as Baltimore or Annapolis). I'd recommend that you pick up a copy of the ARRL Repeater Directory.

We have this problem in Atlanta, also. Tune around the 2 meter repeaters and the majority of them are the "Trucks, Trailers and Medicaid" type. In my book, except for one possible repeater, 2m is a write-off, and only used for remote basing.

We have a number of 440 repeaters listed, though many of them are "paper repeaters", and nary a beep to be heard. One of the 440 repeaters we have is a very active, high technical crowd. Computers, packet, radio, satellite, politics are very popular topics. We have had people that have been referred to our repeater when they need help. We welcome new voices, provide encouragement, and all in all have a good time.

This repeater was started because many of the users used to hang out on a local 2 meter machine. They got upset when the talk was always techical. So the users put up a 440 machine, and all moved up there. The 2 meter group started whining that there was no one to talk to. Guess they can't ever be truly happy.

If you're ever in Atlanta, stop by the 443.650 +5mhz PL100 machine (PL provides enhanced squelch, and is required only if you're QRP). Just don't bring your traffic problems and Medicaid complaints.

BF>
BF>Burt K1OIK

Your message is a sad testimonial to the present state of ham radio.
You said that if you lived elsewhere the ham atmosphere would be different.
Well, I'm afraid not.
Before I left for Florida on February 15th I put my call sign on the
rear of my travel trailer in 3" high Scotchlite letters along with "52 SIMP"
From Cape Cod to Tampa Fla. I did not receive ONE call. Since I don't
travel as fast as the automobile traffic most would pass me. During the
trip about 15 hams with vanity plates passed me. The majority had 5/8 whips
which I'm sure were not CB. I called every one. No response. Well actually
not true, one waved. Obviously N1SGN is a new call therefore not worthy of
a reply or a call. I wonder what will happen when I get my old WA1FSC call

back? I also wonder what would have happened if one of them needed assistance and remembered passing me? I bet I'd get a call then. (Funny, my radio dosen't seem to receive any more) I would be sure to wave back as I continued on my way. But no, I'm not like them. I WOULD stop and assist.
You mentioned in one of our discussions about the hundreds of new young hams who, after being exposed to this pompous, ignorant mentality have given up the hobby. And the few who stay become cloned and stagnate in the mire of the cancerous disease spread by these old men with no lives. How do we encourage these young people to stick with the hobby? I suppose by example. If we get frustrated and quit, what will be left. Look at the local condition. Ron McLeod, K1FTB, who lives in Englewood, FL dosen't even use his 2M HT any more. He said it depresses him. However when he knew I was in the area he kept it on every day. And when I did call him when I got to Sarasota we talked for almost a half hour. Had to end the QSO when the old farts started doubling on me and making remarks. Sad, sad, sad.....
However we are not alone. There are many who feel the way we do. Sarasota, FL has four active repeaters. Three of them have the cancer but 147.300 is definitely a refreshing experience. It's courtesy tone is a cricket chirp, which caught my attention, no annoying messages, no NETS. The hams on that repeater have a sense of humor and talk about interesting subjects. No colostomy bags, coffee breaks, Medicaid bill problems, or endless pissing and moaning. My first transmission, "N1SGN hanging out in Sarasota", got a lot of attention. Real nice guys AND gals, NICE HAMS!
So Burt, hang in there. All is not lost as long as we don't give in. Maybe we just have to set an example to keep the young ones interested. I gave up once before, that was a mistake.

Hans,

Give me the specs for your radio and we have one customized for you.
Using several in parallel is not a good idea, because this requires
accurate power splitting and phase matched combining.

I'll tell you, if you want to hear a racket, try doing even
semi-breakin on a Yaesu FT-101zd. Lots of nice clacky relays in
there. I just set the delay all the way up, get on with sending, and
hope no one is trying to get my attention. Fortunately I do have to
stop and think every so often, giving me a small window to the world
at that point....

My Drake TR-4c is pretty good for waking up the cat, too.

: > radios necissitate this sticker? I was under the impression
: > that we were under soley part 97. Maybe I am wrong, some
: > one set me straight and explain this one please.

: Anything with a computing device needs Part 15 certification (at
: least for now, the FCC has announced plans to relax that).

Actually, only non-industrial "personal computers and peripherals" need to be certificated. In certification, the manufacturer sends test results to the FCC and the approval and ID number is based on the FCC's inspection of the test results. The FCC usually wants to see testing done by a lab the FCC believes is competent.

Most other digital devices need to be "verified," a procedure that requires the manufacturer to test the device to ensure that it complies with FCC regulations. For verified devices, the manufacturer does not need to report the results of the testing to the FCC. Those who note that the manufacturer is on the honor system are correct.

Some devices covered under Part 15 need to be "notified" -- the manufacturer tests the devices and notifies the FCC that the device has been tested.

As Gary correctly pointed out, the FCC has pending rules changes to simplify and streamline the process for PCs.

: of course any scanning receiver that operates above 30 MHz needs
: Part 15 certification too. Most of them either have a sticker,
: or a notice in their manual, that says they are in compliance.

The only devices that need to be certificated are: (15.101(a))

CB receivers
Superregerative receivers
Scanning receivers
TV interface devices
Class B personal computers and peripherals

Devices that need to be verified are:
TV broadcast receivers
FM broadcast receivers
Cable-input switches
"Other" class-B digital devices and peripherals
Class A digital devices and peripherals
External switching power supplies
All other devices (this encompasses electrical, motors, digital
voice recorders, alarm controllers, etc., etc.)

There is a list of devices that are exempt, and that only must be operated under Part 15.5 and 15.29. Those regulations essentially state the one is not to interfere with other radio services.

Part 15 is a real catchall, and it has quite a maze of requirements. There are many aspects that are not well understood. The belief that all digital devices need to be certificated is widespread. (I held it myself until I had to research Part 15.) Part 15 also contains absolute limits on the amount of interfering energy Part 15 devices can emit. These limits are fairly loose and legal Part 15 devices can cause interference. Part 15 was designed to protect your neighbor's TV reception while you are using your video game. It was not designed to protect sensitive amateur HF operation from a computer located 15 feet from the amateur receive antenna.

Of course, Part 15 does have the additional requirement that the operation of the device not cause harmful interference to other radio services. But the responsibility for this does not rest with the manufacturer, but with the operator of the device. This means that if your neighbor's computer or electric fence causes interference to your amateur operation, your neighbor is required to correct the problem. Unfortunately, that doesn't usually work out in practice, but I will save that one for another thread.

: Norm is right here. Us "old-timers" do have to make some effort to
: keep the newbies informed. But what are some good ways to do it?
: Our club newsletter editor is always asking for articles and I have
: been thinking about writing something up on basic topics
: but I just never get around to it.

: What could be done here on USENET? If someone asks "What's 52 simplex?"
: they may get a flood of answers, but the usual problem that new
: people usually don't have any idea of what questions to ask in the first
: place. Maybe we need a QNAOE (Questions Not Asked Often Enough) file.

I'm kinda new to this news group but is there an FAQ for new hams? If so this
stuff should be added to it and it should be posted regularly so newbies can
get the info. I think USENET is the perfect place to get out the word about
simplex operations.

I would like to see more activity on the simplex frequencies since my 2m
operations are mainly while traveling. I always like to find another Ham on
the highway to chat with but seldom find one. I leave the rig on 146.52 most
of the time but ocasionaly scan local repeaters. One of the problems might
be that everyone is listening to 52 but no one is talking. Since simplex range
is limited from mobil to mobil, there may only be a 5 min window to talk to a

guy going the other way on the interstate. I really dont wan't to make a call every 5 mins just to see if there is anyone in the area. Any ideas on how to improve this situation?

I, too, agree with the use of a 'commercial' antenna. They don't have to cost a kilobuck, and there's a decided difference. I once ended up swinging on the exposed element of a Sinclair exposed dipole array for 2M and I lived to tell about it (another story). I'm *real* glad it wasn't something else.

Many commercial-grade antennas are available from the factory cut and tuned for the ham bands. Many of the engineers are hams, too.

However, it really depends on your usage and needs. I have had repeater facilities in areas so remote I don't ever want to (and often couldn't) visit for an antenna repair. Also, how much wind is 'high wind'? If a 100 mph breeze strikes that Diamond at -20(F), it is going to be history. How much ice is expected? Is this repeater vital to emergency communications? Is it ok if it is down for a few days? For casual use, any of the antennas mentioned are just fine. I prefer Comet to Diamond, and have performed formal, protocol-governed tests to comfirm it. The new Spirit series is a hybrid commercial/ham product, and should provide good results.

I have had 10-15 years out of some of my repeater antennas, especially exposed dipole arrays. Co-axial colinears of any type are likely to break up internally before then. When I look at the total life-cycle cost of owning, I go with the commercial version. However, my needs are extreme, and 100% uptime is the goal.

try this if you have a www client

http://wwwrsl.forestry.umn.edu:10000/bwcaw/

There are developed campsites located in the Boundary Waters Canoe Area
whose use is required. Sites are located on nearly every lake and
are noted on the Fischer maps of the BWCA. You need to make a reser-
vation by calling 18007453399 and you need to know your entry point
and you need to do that fast. Your outfitter can probably help you
with routes and reservations.

Have FUN Send a trip report when you're back

: Most weak signal contacts are done near 144.200 MHz. But check
: the schedule of any announced EME operation to determine their
: actual operating frequency.

This frequency is much too popular to use for EME work.
Most of the EME work on 2 meters is between 144.000 and 144.050
MHz. The fact that this part of the band is CW only for USA
amateurs isn't a problem--only a couple stations are big enough to
work SSB on 2M. Those stations often get their picture on the
cover of QST.

SSB EME is probably most practical on 432 MHz--I think you
can get pretty good signals with 24 yagi arrays on each end
and 1500 watts. 2 Meters is too noisy, so you need huge
antennas to compensate. The higher bands still need a bit
of experience and test equipment, at least for EME work.

I am working on setting something up for 6m FM from home. In the meantime
I have been listening with a scanner. There is not a lot of activity
but there is some.

You should consider listening to simplex on 52.525 MHz. I occasionally
hear activity on my scanner. Considering that the scanner is not too
good a receiver, I am hoping that there will be more to hear when
I put up a better antenna and receiver.

There is a repeater in Wheaton on 53.25 that you should try. It has
had periods of activity in the past but I haven't heard anything
in quite a while.

edited by I1JQJ, IK1IYU, IK2ULV
translated by I1-21171

BV - As said on number 200, Yuki (JI6KVR) says that from 31 March to 2 April, during his QSY in Taiwan, he will join the operations from Pescadores Isl. (AS-103) using BV9A/JI6KVR call. QSL via EA5KB.
DL - From 25 to 28 Maggio, DL6CGC and DL8CZG will be portable from Poel Isl.(EU-098) with SSB/CW/RTTY activity from 10 to 80 mtrs bands and VHF (2 mtrs) also.
EA - EA5URD will be active the 2nd of April from Mazarron Lighthouse (FEA E-120). QSL via EA5GMB.
EA - EA3BT/3 will be QRV the 2nd of April from Islote Galera Palamos (E-256). QSL via EA3DIH.
EA - EA4ENK will be portable the 2nd of April from Isla De Las Vinas (BA-53). QSL via EA5OL.
EA - EA2/EA1FCH will be QRV from Isla Zadorra (VI-07) the 2nd of April. QSL via EA5OL.
EA - Operation is aspected the 2nd of April from Islote Els Pallers (E-258). QSL via EA5OL.
EA - EA1AGZ will be portable the 16th of April from Isla Pollos (VA-25). QSL via EA5OL.
EJ - The WestNet DX Club would like to join the IOTA Contest from Inis Meain Isl. (EU-006).Activity from 27 July to 1 August all bands all modes, AMTOR and PACTOR also. QSL via EI6FR.
HC8 - Horst (DF1VU), Thomas (DF8VK), Joachim (DK5VP) e Frank (DL4VCG) will be portable /HC8 from 25 April to 14 May, working from HC8KU station. Activity all bands from 10 to 160 mtrs, WARC too.
HR - Gerard, HR5/F2JD, is active until 1st of April, expecially on CW, and he'll try to be QRV from Gulf of Fonseca Group (NA-060).
IC8 - From 21 to 23 April Raul (IK8VRS) will be portable IC8 from Procida Isl. (IIA NA01, IOTA EU-031).
ID8 - From 25 to 26 March Raul (IK8VRS), with other friends, will active Le Castella Isl. (IIA KR01) near Capo Rizzuto. QSL via IK8TPJ.
IL3 - From 25 to 26 March, Oreste (IK5VIA) together with Stefano (IK3ABY) and other friends, will be portable IL3 from Lido Isl. (EU-131, IIA VE-32).
JW - DF6JC is QRV as JW/DF6JC until 30 march from JW5E station.
KP4 - Ken, KP4XS (ex KH2F), will join the CQWW WPX SSB Contest from his new QTH in Puerto Rico, helped from K1RZ, K3NA, KF3P e W2EOS.
LU - The special station LW3DSR is active until 26 March,during the 12th

edition of Pan American Sport Games. QSL via LU1DVT.
OZ - From 13 to 20 May Siggi, DL1AZZ, will be active from Mandoe Island (EU-125) as OZ/DL1AZZ/p on 10 to 40 mtrs bands. QSL via home-call.
TP8CE - Station of CERAC (Council of Europe Radio Amateur Club) will be QRV during the weekend, joining the CQWW WPX SSB Contest.QSL via F6FQK.
UA1_fil- Due to government funds reductions,many polar bases on Franz Joseph Land risk to be closed and abandoned next during next months. The personal will be moved to Russia and there will be no more active stations like R1FJL (ex 4K2MAL) and RX1OX/FJL.
V7 - Ken, V73C/AH9C, says that OKDXA (Oklahoma DX Association)is no more QSL manager for his operations:send you direct QSLs to V73C address Kenneth R. Wells, P.O.Box 1255, APO AP 96555-0008, USA.
VK6 - More from previous number: Malcom (VK6LC) says that during his next operation to Faure Island (NO-REF) will be joined from Dave, VK6DLB (they was already active from Malus Island).They have already sent copy of permissions to IOTA Committee. If 20 mtrs band conditions will be poor, VK6ISL will be QRV for Europe on 7084 KHz from 1800Z to 2300Z. QSL via I1HYW (Europe), K1IYD (N.America) and VK6LC (Oceania).
VK0_h - The South Sandwich Island DX Group, announcing a new member in the team (Verne, W8BLA, very able on CW), says that the permission has been asked to land in Heard Island and is waiting for the answer by australian government. Team is still lookin' for CW operators and for a doctor: FAX for further informations to Jerry, AA6BB, +1-503-998-1269, or Tony, WA4JQS, +1-606-679-3151.
VU_ant - Dinesh, AT3D, is comin' back in India,after his trip in Antarctica. He will be QRV with his normal call VU3DEN.
W1 - The 1st of April WW1V and KA1GJ will be active from Cousins Island (NA-137) for two hours, about from 1500 to 1700Z. They will proba-bly be active from the same islnad during the IOTA contest.
W4 - Mac, KM4WE and other Clay County DX Association operators, will be active from 14 to 16 April from Beverly Beach, Florida State East Group (NA-138). QSL via KM4WE, 5180 Mallard Rd., Middleburg, FL 32068-7717, USA.
XE1 - A scientific expedition is aspected to active in June the Jalisco - Nayarit State group (NA-189), precisely Les Tres Marietas Islands and Roca Corbetana.
Xe3 - Bernardo, XE1BGM/3, from Carmen Island (NA-135) says that he is ac-tive during weekends on 14260 and 21260 KHz from 1600Z to 2400Z. He says also that he has big problems with local postal office: dama-ged envelopes and lost QSL. He has now a new address:
Bernardo Garcia Mendoza, P.O.Box 882, Poza Rica, Ver., Mexico.
ZF - AH9B is active as ZF2WH until 27 March, joing the CQWW WPX SSB Test
3D2_cr - Last news from 3D2CU/MM are about a delay of operations due to dif-ficulty to land on Conway Reef. The rough sea with high waves has overturned the ship.
5R8 - Ben, 5R8DS, says that he has improved the 80 mtrs band aerial and he is QRV on 3505 KHz CW and 3792 SSB (he prefers CW). QSL via:
Ben Witvliet, B.P. 404, Antananarivo-101, Madagascar.
5X - From 25 March to 3 April, Franco (IN3DYG) will be active as 5X4D

from Arua, with volunteers. QSL home call.
9H - From 10 to 24 April, Holger (DL5XAT), Matthias (DH1OAH), e Felix (DL8OBC) will be QRV from Gozo Island (EU-023) respectively as 9H3SB, 9H3UF e 9H3UD. Operations on all HF bands in CW/SSB/RTTY/AM-TOR/PACTOR and also RS satellites. QSL for 9H3SB via DL5XAT, Holger Binder, Thorkoppel 15A, D-22885 Barsbuettel, Germany; for 9H3UF via DH1OAH, Matthias Deutscher,P.O.Box 600121, D-30947 Ronnenberg, Germany; for 9H3UD via DL8OBC,Felix J. Riess, P.O.Box 1253,D-30984 Gehrden, Germany.
9Q - Peter, 9Q5TT (ON6TT) helped by Alex 9X5EE (PA3DZN) will join the CQ WW WPX SSB Contest, during this weekend.A special call has been re-quested or the 9Q5TT call will be used. QSl via ON5NT.

Source record: 249719

Hi. My name is Heath and my call sign is N0ZCL. I just recently purchased a 2 meter mobile rig (azden 7000hH). I will be installing it in my car this weekend (Mazda) and was just wondering if any people are out there who have experience in this area would be willing to send me any hints and/or directions for proper installment. I am particularly interested in the electrical / wiring part of installment. For instance, should the wires (power) be connected directly to the car battery? Any helpfull information pertaining to this area would be much appreciated.

I understand there's a special comb you can use for repeater lice; or
maybe an ointment.

4489. CAPS / MARS ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-30 00:00:00 UTC
From: STUHVAND@ACS.EKU.EDU
Message-ID: <01HOQY7QJOFW000I9H@ACS.EKU.EDU>
Source record: 249721

I would like to know exactly what CAPS and MARS modifiable refers to?
What frequencies do these include? I have an Azden 7000H and was told
that it had CAPS/MARS capability. How could I go about modifying it to
gain access to these frequencies? Any info would be much appreciated!

Send E-Mail to : stuhvand@acs.eku.edu

Thanks again,
Heath -- N0ZCL

4490. Next 2x2 CA call?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-30 00:00:00 UTC
From: greg@core.rose.hp.com
Message-ID: <D69Lrt.6qn@icon.rose.hp.com>
Source record: 249722

Just a curiosity question for the net that seems to have stumped the band here.

In California, the Advanced pool of calls is in the latter half of the alphabet with the KO6 prefix. What happens when they get to KO6ZZ? KP6AA? I know KP4 is already used (Puerto Rico), and I think there are some others.

Will they skip the KP's and go to KQ? Are all the KP4's 2x3 calls, so a KP4xx 2x2 call will still be unique? Will CA move on to KP6, but 4-land skip it and go right to KQ4AA?

The question came up as I was looking to see what sort of call I'd get when I upgrade.

Greg KD6KGW/AA

4491. GB2RS News 2nd April 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-30 00:00:00 UTC
From: dave@llondel.demon.co.uk
Message-ID: <796612556snx@llondel.demon.co.uk>
Source record: 249723
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 2nd of April and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

The Israeli amateur satellite launched on Tuesday failed to go into orbit.

And reception reports are requested on a new 6 metre beacon transmitter near Inverness.

The Israeli amateur satellite, Gurwin-One, which was launched last Tuesday, failed to go into orbit. This was because of a malfunction in the fifth stage of the Russian rocket. As a result the satellite, is reported to have come down the sea.

Six metre beacon GB3RMK on 50.060 MHz, located near Inverness in the Highlands, will be off the air from today until next Sunday, the 9th, for essential maintenance. During this period test transmissions will be made using the new beacon transmitter which is due to enter service in August. Reception reports would be welcomed and can be sent to Chris Tran, GM3WOJ, by packet radio. The address is GM3WOJ @ GB7INV.

At this year's Stafford Amateur Radio and Computer Show, there is an opportunity for radio clubs, societies and special interest groups to put on a display free of charge. The event, which incorporates the RSGB National Convention, takes place on the 19th and 20th of August. If your club would like to take advantage of this offer, call 01923 893929 for a booking form.

GB4IRC will be active from the headquarters of the International Rescue Corps near London on Friday the 7th of April. The International Rescue Corps is a non-government funded rescue service which was recently active in Kobe, Japan, at the invitation of the Japanese government. Ian Marsh, G4INK, and his wife - who is from Kobe - were part of the team which provided earthquake rescue assistance and acted as interpreters and local guides. GB4IRC will be active on 80, 40, 20, 17 and 15 metres, mostly SSB, around the middle of each band and it is expected that members of the International Rescue Corps, including the Japanese team, will take the microphone.

Now some notes for your diary: the Morse Enthusiasts Group Scotland is organising an informal get-together near Dunfermline to celebrate the birthday of Samuel Morse on Thursday the 27th of April. All amateurs are welcome for refreshments and a go on the key. For further details,

please send an s.a.e. to George Allen, GM4HYF, whose address is correct in the latest RSGB Call Book.

Don't forget the RSGB Headquarters annual Open Day on Saturday the 22nd of April. This year HQ will be celebrating 100 years of radio with a Marconi exhibition and a special event station, GB100IMD. In addition, there will be guided tours of headquarters, including the museum, library, shack and QSL bureau. The RSGB HF Awards Manager will be in attendance to check QSL cards and issue awards. The Radiocommunications Agency, SSL and traders will also be there, and the Society looks forward to meeting as many members and non-members as possible.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

A DXpedition from Layang Layang Island in the Spratlys with a group of seven Malaysian and Japanese operators was due to come on the air on Wednesday and be active until tomorrow, Monday the 3rd of April. The callsign is 9M0A and the group planned to be active on all bands from 6 to 160 metres on SSB, CW, RTTY and SSTV. And another expedition is planned from the Spratly Islands between Monday the 10th and Sunday the 16th of April using the callsign DU0K.

From Mauritania, a group of Italians should be active from now until the 20th of April, signing 5T0AS on all bands, SSB and CW. They hope to activate Tidra Island, which counts as AF-050 for the RSGB IOTA Awards, signing '5T0AS Portable' during their stay in Mauritania. QSL all contacts direct to IT9AZS.

And DL1XAQ and DL9XAT should be active from St Lucia {pronounced Saint Loosha}, J6, in the Caribbean from now until Tuesday the 4th, when they move on to Guadeloupe until Saturday the 8th of April.

Next the Rally News and we know of only one event this week:

Today, Sunday the 2nd of April, the Feltham and Hounslow Sea Cadets Computer and Radio Rally takes place at the Feltham and Hounslow Sea Cadet Corps, 2 Poplar Way, Feltham, Middlesex. Doors open at 10 am.

We know of two events next weekend:

On Sunday the 9th, the Launceston Amateur Radio Rally will take place at Launceston College, starting at 10.30 am. The event will feature trade stands, a bring and buy stand, an RSGB bookstall, and Morse tests on demand. Take two passport-size photographs and identification if you wish to take your Morse test at the rally. Talk-in will be on 2 metres, channel S22 and further details may be obtained from Roy, G0IKC, on 01409 221624.

The White Rose Rally will also take place on the 9th of April, at its new venue - Leeds University. Doors open at 11 am, and the event includes a bring and buy sale. Morse tests will be available on demand: don't forget the two passport-size photographs and identification.

Details from Allen, G7ELS, P O Box 73, Leeds, LS1 5AR, or call him on 0973 189276.

The Amateur Radio Caravan and Camping Club rally at Amerton near Stafford, will take place from Good Friday, the 14th of April to Bank Holiday Monday, the 17th. If you wish to book a pitch please contact the Membership Secretary, Alan Gard, G4LWA, whose address is correct in the current RSGB Call Book, or telephone him on 01494 531755. Completed applications must be with the club by Friday the 7th of April.

And on Saturday the 15th of April, the All Micro Show Radio Rally and Electronics Fair will take place at Bingly Hall, Staffordshire County Showground, Weston Road, Stafford. Doors open at 10.00 am and further details may be obtained on telephone number 01473 272002.

We will bring you details of the events taking place on Easter Sunday and Monday in next week's broadcast.

Now for the HF contest news:

There was plenty of activity from stations around the world during the CQ WPX SSB contest last weekend. British participants included G3NLY, G4UJS, GB0DX, GB6BT, GW4BLE, GX0OBS, GX0FDX. Conditions were described as quite good considering the stage of the sunspot cycle, with openings to Africa, the Indian Ocean and especially South America on 10 metres being reported.

On Tuesday the 4th of April, the first event of the RSGB Slow CW Cumulative contest will take place. The rules are in February's RadCom.

Next some VHF contest news:

Next Sunday, the 9th of April, the first 23 cm and 13 cm fixed contest and SWL contest will take place between 1700 and 2100 UTC. The rules were published in the February Radio Communication.

And now the solar factual data:

The period from the 20th to the 26th of March saw solar activity increase to moderate levels and the geomagnetic field increase to sub storm levels. Sunspot numbers increased from 63 on the 20th to end the period at 83, the mean for the period was 73. Solar flux levels increased slightly but remained in the low 90s everyday and averaged 92 units for the period. Solar activity started the period at very low levels with several sub flares, but on the 22nd activity increased to moderate levels when a M2.4 solar flare took place at 1641 hours. The electron fluence declined every day and is now at a moderate level, it is now three orders of magnitude lower than the previous week. X-Ray flux levels increased from A6.2 units on the 20th to B2.4 units on the 23rd with the average for the period at B1.1 units. The 90 day solar flux average on the 26th was 84 units, up one unit from last week.

Geomagnetic activity remained very quiet and was down to Ap 3 units on the 22nd. However, during the mid-morning period on the 26th levels

increased to sub storm, with the planetary Kp indices up to K6. An aurora took place in the afternoon of the 26th. The daily figure on the 26th was Ap 32 units. The average for the period was Ap 9 units. The state has been 'nil, nothing to report' up to the 24th then 'mag alert' until the end of the period. The aa indices, as supplied by British Geological Survey for the period from the 14th to the 20th of March declined from active to quiet levels. The most disturbed day was the 14th with 31.1 nanoTeslas being recorded. On the 18th only 8.4 nanoTeslas was recorded and was the quietest day. The average for the period was 17.2 nanoTeslas, about K2. Bartell's rotation number 2208 starts on Monday the 3rd of April.

I'll repeat the figures: spots-73, flux-92, Ap index-9, X-Ray flux B1.1.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 17th to the 23rd of March, averaged 7.1MHz. On the 18th levels were up to 7.8MHz and then declined to 6.5MHz by the 22nd. The darkness hour lows increased slightly everyday and averaged 2.9MHz. The daytime highs took place between 1100 and 1900 hours and the darkness hour lows at 0500 hours everyday. Now that summer time has arrived in the northern hemisphere we can expect to see the daytime highs taking place mostly in the late afternoon or early evening period as the days continue to lengthen - the darkness hour lows should still take place a hour or so either side of local sunrise.

And lastly the solar forecast.

This week the quieter side of the sun will be looking our way and solar activity is expected to be very low with solar flux levels declining to the high 70s. Geomagnetic activity should be quiet to unsettled for the first half of the week but then increase to active levels towards next weekend. Ionospheric levels during daylight hours are expected to be at about 22MHz for the south and 19MHz for the north. Levels may decline after midweek due to the expected higher geomagnetic activity. The darkness hour lows are expected to be about 10MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Whisky and G7 Uniform Papa series, and Novice calls in the 2 0 Alpha Kilo and 2 1 Delta Victor series.

I have a license plate frame that says "try 146.52, 446.00 or 1294.5",
and have those frequencies in the calling channel of my TM942. When
I'm on the road, I'm listening to those freqs UNLESS, I'm talking on
some other frequency, there's been intermod, etc. If there's a local
repeater that might be interesting, I'll try that, and let the radio
scan between the two.
I've had people who called just because they saw the plate, people who
saw the frame and came up because of that, and usually will call any
ham plate or callsign I see on 146.52.
I was in Idaho, passing through a small town (forget which one)
looking for a laundromat, when I got a call from a local who saw the
plates, directed me to the laundromat, and came and visited with a cup
of coffee.
I also have listened in to a fellow travelers sched on 20M. I've got
to get an HF antenna on the truck.

Hi all!

I am the Emergency Coordinator for the Utah County ARES. I am interested in finding out if there are any other EC's, DEC's, or SEC's that are willing to share information about their organizations. I would be willing to do it either publicly over this newsgroup, or privately over email.

I have a fairly active group in Utah County, but always looking to improve! Please, let me know what you think.

A few more than a couple, but you're right, the only way most of
us are going to make a 2 meter SSB EME contact is if one of those
big stations is on the other end. I've heard'em, but not yet worked'em
with my Oscar setup. I have vainglorious dreams of making EME contacts
with digital modes other than CW, so operation below 144.1 isn't of
much interest to me.

: between two GP300s. Can I, for example, us QuickCall or whatever it's
: called to turn on my partner's radio? Can Burst tones be used to do
: this? I know the Ritron Patriots are capable of this QuickCall style
: paging, but is the GP300?
The GP300 has a number of signalling decode features that are
primarily documented (like most current M radios) in the RSS
manual (radio service sofware)

The only dynamic encode is DTMF -which the radio is not able to
decode (last time I looked)

I am assuming we are talking about the US domestic model since I
believe that the European version may have the capibility for
unit to unit signalling (5/6 tone) via the keypad/display

The hardware service manual is just for fixing broken HW with
the usual parts and schematics. These do not usually document
the radio functionality to well on current production radios.

Good Luck

Hi!

I was wondering if someone could also cite any 6 meter repeaters in the
D.C. area, or if not, what 10 meter repeaters in the D.C area there might be.

I've just become active again after around 15 years and just got an IC-736,
so I would love to check out the FM capability up on 6 or 10 meters, but I
know nothing about current repeaters on those bands.

Thanks for any help,
Alan

Dear OM,

The author of Geoclock, as I recall, is W4RX. If you write him, he can get you the program and has a catalog of maps available. He can even get you a great circle map centered on your own QTH if you pay the fee. Geoclock is shareware- you can download it to try it, and then write to W4RX for the full program, etc.

>meters to know that <g>.)

No, I have a theory that learning the code at 20 WPM does something to the mind. If you look at statistics you will see that most FCC rules infractions are by Extra Class operators. Also there were suggestions that non-Extra hams should not be allowed to request a deceased relative's extra callsign. I think this was due to a elitist view that the person did not earn the callsign and may be mistakenly admitted into "the club". Of course if I went for Extra I would keep my old imfamous callsign because I am know by it and it is getting to be an old callsign. The one call area got alittle pass my call in the WB1Hxx series before switching to KA1xxx series. I would only consider a old K1xxx call as a replacement (K1EAC].

I do not mean to demean every Extra as I know some that are okay people but they seem to be exceptions (maybe they guessed the answers on the CW test).

Of course I could go on about AOR8000 scanners but I will save that for a crosspost to rec.radio.scanners.

The answer to this is "sometimes". I QSL stations I've worked in a contest if I need their country, state, county, island etc for some award I'm chasing. I also QSL them if they send me one first. Otherwise, no. OTOH, some stations, particularly JA's, QSL everyone they work in every contest. I have a huge collection of JA cards I've received through the buro for contest QSO's...I'm sure most active contesters could say the same.

You can use the CT Wave that comes with sound blaster to do it. Just feed it off your audio jack on the radio and record it. then you can view it at any time. it also works to be able to Identify the bad guys who jam or disrupt a repeater but remember you will have to receive their signal direct not what the repeater sends.

: know not what.

: The books I have gave me no answer. Had I known how to respond
: correctly, I could have helped some contesters make contact. Not
: knowing, I didn't respond at all.

: Tony
: KC7HDT

Most contests have different "report" requirements. Some use RS(T)
and a consecutive serial number; some just a serial number; some RS(T)
and CQ zone; some a county name, etc. etc. The best way to keep on
top of this is to subscribe to QST or CQ magazine. Most contest rules
are covered in these mags.

With some experience you can pretty well figure out what's needed
(except for Field Day...I think they even require shoe-size :-)).
Actually, the intended purpose of any contest report is to simply
confirm a good two-way contact did occur, and of course to give
everyone practice at high-speed or high-volume operating, austensibly
to improve emergency readiness capabilities.

IMO they aren't really Extras if they chose to take the Q&A version code
test, for one doesn't need to really copy 20wpm to `fill in the blanks'.
Copying 20wpm means one minute of error-free copy at 20wpm. Period.

i know what a transverter is , but why do they cost so much?
i have gotta info from only SSB ele. in PA so far, and thay only have 100mw transverters with 144IF but ONLY 10.036GHz.
does SSB ele. only have one freq. 10gig xverters or is that the only freq on 10ghz?
who else has more range and cheaper 10 ghz radios?

thanks

I have the Timewave dsp 9 with the first upgrade hooked up to my
Knwd TS-520. Keep in mind that the 520 does not have any filtering
built in. The dsp 9 before the upgrade worked fine on CW but not so
good on phone. The upgrade made a lot of difference on both CW and
phone. I think there is a second upgrade, but Im not sure.
Installing the upgrade was very easy. The instructions provided with the
upgrade kit are well done. Opening the case and removing the board gave
me the chance to look things over. I was very impressed with the quality
of workmanship. Also, the case is made of very strong cast aluminum.
I dont know anything about the MFJ unit. I do recommend the dsp 9+
to anyone with a radio that has no filtering installed.

He or she with the most bucks wins!!! Yes, those of us with only 100
watts or less and living on a city lot, can and do, have a great time
contesting, but you wont find many of us in the winners circle. All
the skill in the world is not going to make up for the big bucks.
All you need is a big country lot away from the city noise, with a big
antenna farm, and a big 1.5kw amplifier, and a programable voice or cw
keyer, a very expensive receiver, and some skill, (cw excluded), wins
almost all the time. He or she with the most bucks wins!!!
I can't wait for the next one though.

I as a former dispatcher for Burlington Motor Carriers Know of at least 1 if not more truckers that are hams. His call is N6GVG and his name is Ralph. When he is rolling he monitors 52 simplex.

I also know of a driver for FedEx but I can't remember his call. He used to make a run from Detroit to Indy every tues and thurs.

Hope this helps.

>I think $31 would still be a steal!

It's really interesting how people's perspectives in different
avocational fields vary. For example, I'm also an amateur astronomer,
and Sky & Telescope costs $27/year. But all you get is a magazine; no
national org or anything like that. For the latter, you could join,
say, the AAVSO ($50) or A.L.P.O. ($20), or the Royal Astronomical
Society of Canada (RASC) for $36 and follow what the pros and advanced
amateurs are doing. So, to pursue that hobby costs at least $47 for
S&T plus the cheapest organizational membership. And, of course,
there's the cost of equipment (The cheapest 6" Newtonian plus accessories,
eyepieces, etc., will run you $500+, and it's roughly like having a
Ten-Tec Scout and dipole).

So, as hobbies go, the $31 for ARRL membership has *got* to be
one of the best buys around!

I'm a grad student in the microwave program at Cal State University, Northridge (in California) and I wish to design and build some 10GHz equipment for the campus ham radio club (which is in hibernation after the earthquake). I need some pointers and references as to what is going on in the band so that I can build appropriate circuitry. I'm going to start with the antenna first since that should apply to whatever circuitry feeding or receiving from the antenna. Am I better off with a real directional antenna (fun to design, moderate to fabricate) or should I go with something less directional until I figure out with whom I'll communicate?

Thanks,

: If you don't like this idea, I certainly don't, then you should
: contact your local coordinators and express your opinion on the
: matter strongly. Make sure that they do the same at the ARRL meeting.
: This is one idea that needs to be nipped in the bud before we are
: back to the horrors of the 70s in regard to repeater licensing and
: modification.

You will probably find that your local coordinator will be very much in
favor of a return to repeater licensing. There are a number of things
that set a repeater station apart from the typical amateur radio station
and they should have a separate license.

Horrors? I don't remeber any horrors. Few repeater coordinators OR
repeater trustees were happy to see the WR calls go away.

> 73
> N1SGN

Burt, I'm surprised you are still operating on 2 meters. In the
Cincinnati area it's just kilocycle cops and boring
conversations with occasional autopatches with "Hi honey, I'm a
block away from home. See you in a minute." type crap.

I operate a lot of 75 meter HF SSB on 3898 and 3891. Lots of
craziness but FUN!!!! I also operate on AM on the high end of
40 meters and also 160 meters. The AM type of operation is
fun because you get involved with a small segment of hams who
share information to keep the old boat anchor transmitters and
receivers running, plus almost everyone on AM is technically
proficient and knows how to keep their stuff running without
having to send it to the repair shop.

I have a 440 repeater / remote base, and some of the locals
are shocked when I am running 75 meters through the remote
base. I tell them to move their ON/OFF switch to the OFF
position to solve THEIR problem.

73 and have fun on 147.300, Jack WB8BFS......

>>73, SM6UUQ

I've satisfied myself of the truth date. JIDX will hold on 7-9 Apr.
(I asked JIDX CONTEST COMMITTEE CHAIRMAN. :-)

And JIDX Contest rules is as follows.

==========
1995 JAPAN INTERNATIONAL DX "CW" CONTEST

OBJECTIVE: For amateurs around the world to contact JA
stations in as many JA prefectures as possible.

1. CONTEST PERIOD:
Low Bands
Starts: Jan. 13(Friday) 1995 2200 UTC
Ends : Jan. 15(Sunday) 1995 2200 UTC

High Bands
Starts: Apr. 7(Friday) 1995 2300 UTC
Ends : Apr. 9(Sunday) 1995 2300 UTC

Operating period is maximum 30 hours of the total 48, except for JAs,
who can operate the full 48 hours. Off period must be longer than
60minutes length and clearly indicated in the summary sheet.

2. BANDS
LOW BAND: 1.9, 3.5 & 7MHz (QSX for JAs on 1907.5$B!A(B1912.5kHz)
HIGH BAND: 14, 21 & 28MHz, except for the WARC bands.

3. ENTRY CLASSIFICATIONS:
Choose only one!
3-1.Single Operator Multi Band
3-2.Single Operator Single Band
3-3.Single Operator QRP(5W output or less)
*QRP stations must sign CALLSIGN+"/QRP"
3-4.Multi Operator Single Transmitter

All categories; only one transmitted signal allowed at any one time.
Single operator can change bands at any time.
Multi Operator; They must remain the same band at least 10minutes
when they make the contact on that band.
Single operator, single band contestants may only submit an entry
for a single band, though submission of check logs for operation
on other bands is encouraged.

4. CONTEST EXCHANGE:
JAs : RST report plus Prefecture number 01 to 50.
Others: RST report plus the CQ-ZONE number 01 to 40.
*Reminder; contest exchange is different between PH and CW contest.

5. POINTS:
Only contacts between JA and DX are worth contest points.
(DX-DX or JA-JA contacts are no point or no multi.)
1.9MHz ..... 4 points
3.8MHz ..... 2 points
7MHz, 14MHz and 21MHz..... 1 point
28MHz..... 2 Points

/QRP ..... X 2 (Bonus Multi)
Multiply original points by 2 with QRP stations.
(ex; QSO with /QRP on 28MHz is 2X2=4, on 1.9 is 4X2=8)

The same station may be worked only once per band.
No crossmode, crossband nor repeater contacts are allowed.

6. MULTIPLIER:
JAs : The number of different DXCC country (except JD1) and
CQ Zones worked on each band.
Others : The number of different Japanese Prefecture plus Ogasawara
Is.(JD1), Minami-Torishima Is.(JD1) and Okino-Torishima Is.
worked on each band. Maximum of 50 per band.

7. SCORING:
The final score is the result of the
(Total QSO points) multiplied by (Total multiplier).
Ex. 100 QSO points x 59 multi = 5,900

8. LOG INSTRUCTIONS:
8-1. All times must be in GMT.
8-2. All sent and received exchanges are to be logged.
8-3. Indicate the new multiplier(prefecture) only the FIRST TIME
it is worked on each band.
8-4. Duplicate contacts on same band must be clearly shown and
marked as 0 QSO point.
8-5. Electronic Log:
Disk log; IBM, MS-DOS compatible disks are accepted only with
the printed summary sheet. The LOG format must meets the
"ARRL Suggested Standard File Format For Submission of Contest
Log Data".
Email Log; Request to send the instructions to the email address

indicated below with the word "#get eleclog.eng" in the body of
the message.
jidx-info@dumpty.nal.go.jp (For information request only)
Then you'll receive the instructions by email.
8-6. Use a separate sheet for each band.
8-7. Each entry must be accompanied by a summary sheet showing all
scoring information, class of entries, name and address in BLOCK
LETTERS, and a signed declaration that all contest rules and
regulations for amateur radio in the country of operation have
been observed.
8-8. The 18 hour non-operating periods must be clearly shown in
the summary sheet.
8-9. All entrants are required to submit dupe-check sheets (an
alphabetical list of calls worked) for each band on which 200
or more QSOs were made.

9. PLAQUES:
Plaques will be awarded to the winner in each class in each continent,
Japan, Zone 3/4/5 and World.

10.AWARDS:
First place certificates will be awarded in each class in every country
and in each call area of the USA.

11.SPECIAL CONTEST AWARD:
Any entrants who worked all Japanese prefectures (01 to 47) during
the contest period can request a Special Contest Award with the
separate worked list with free of charge.
Stations callsign, time, band must be indicated ordered prefecture
number in the list.

12.REPORTING:
A original log and a summary sheet will be requested with a SAE
+ one IRC but any log forms will be accepted.
All entries must be postmarked no later than 30th April and
they should be sent to
JIDX contest "LFCW"/"HFCW", c/o FIVE-NINE MAGAZINE
P.O.Box 59, Kamata, Tokyo, 144 Japan
The contest results will be sent with one IRC and SAE.

Email log submissions will be judged with the time stamp of the
email and it should be sent to;
jidx-log@dumpty.nal.go.jp (Log submissions only)
The acknowledgment will be sent when the email log is received.
The result also will be sent by email.

13.DISQUALIFICATION:
Violation of the contest rules.
False statement in the report.
The decisions of the JIDX contest committee are final.

[end]

: >2x2 call will still be unique? Will CA move on to KP6, but 4-land skip it and
: >go right to KQ4AA?

: Well, they didn't skip the KC6's (KC6X2 calls are currently assigned to
: Belau (Palau)). This has led to some confusion!

: I'll bet they do assign KP6 calls!

According to the 11-1-87 edition of the ARRL publication "FCC Rule Book"
on page 3-14, it says:

"The following prefixes will not be assigned to stations in the
contigious 48 states: KH KL KP NH NL NP WH WL WP. If they are going to
assign KP6 calls, then they should have assigned KL6 calls. There are no
KL6 calls.... I think they are going to skip KP6 and go to KQ6.

Believe it or not, Radio Shack has (or had) such a device for $99.
I saw a review on it a few years ago. Unfortunately, it has to
use a special probe that has a button on it. (for blind people, this
is a way of distinguishing them, tho). A few weeks ago I saw one on
clearance at the local Radio Shaft for $69. I should've picked it
up. Oh well. Maybe I'll see one again at the local hamfest? (Dayton
Hamvention in April! Whoohooo!!)

Oh, please stop this,

This discussion has been going on for weeks, and whenever the issue has
setteled for a few days someone digs it up from some newsreader that
seemingly keeps stuff for ages.

There are very good reasons for keeping AM with aircraft radio.
for this application it is just better.

>neighbor's tv set, and it's more sporting to boot. It's your decision, of

I pretty much agree with Mike; for general HF operation, 100 watts
is plenty. I chase DX on CW and can usually hold my own, even in pileups;
technique is much more important than power. Granted, if I try to check
into a SSB traffic net on 75 meters, some nights I do fine and other nights
I get clobbered, but then I'm not heavy into traffic. IMO, the main reasons
to run high power on HF are:

1) You're NCS on a traffic net. Having high power enables the NCS to
better "control" the net frequency under adverse conditions.

2) You're a DXer with 200+ countries confirmed, but for whatever
reason you can't build up a suitable tower and "yagi or quad"
farm to give your 100 watts that extra "boost" you need to go
the rarer countries;

3) You're a DXer with big antennas but you're trying to get those
last 25 or 30 countries so you can make the DXCC Honor Roll;

4) You're an *avid* contester who isn't satisfied unless you can
win the SS or CQWW or whatever;

5) You have a serious personality defect which causes you to want
to stroke your own ego by blowing everyone else way with RF.

Well, OK, #5 is really sort of "tongue in cheek," but there really
are some folks like that around.

And remember, a lot of people do *very* well, thank you, and in fact
are more turned on by the challenge of, QRP! (I've got 35 states that
way so far). But 100 watts is a nice power level for the average ham with
an average antenna (multiband dipole, windom, or vertical) to use.

OO>
OO>Recently I listened in to some HF phone contesting, and (being new
OO>to ham radio) left with this question:
OO>
OO>What is the content of the brief responses to the CQ's?
OO>

The exchange depends on the specific contest. In some you send a signal report and a serial number, in others a signal report and your ARRL section, in others a signal report and your CQ Zone, etc., etc. The rules for any particular contest are usually published in QST and CQ a month or two prior to the test.

Lacking subscriptions, just jump on an ask. Participants will be more than eager to add you to the log and give a quick explanation of what to send.

While I am not saying that the system is broken that repeater licensing with all sorts of requirements is required, I do say that the current system has some significant flaws. Specifically, I mean the existence of paper repeaters. In many populated parts of the country, there simply aren't any free frequency pairs available. This is not to say that there are repeaters at every pair.

I am using a Baycom modem. Some people dont like it, but it works
great and costs only the fraction of the price of a TNC.
There is also a variety of software for it. It does, however
require a 286 or better a 386.

4549. VHF/UHF EME/Weak Signal Info

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-31 00:00:00 UTC
From: phb@syseng1.melpar.esys.com
Message-ID: <phb.796663632@melpar>
Source record: 249588

Following up on a previous post: Zack, KH6CP, is correct
that CW EME is between 144.0 & 144.05, and that also follows the
ARRL Band Plan for 2 meters.

While the ARRL Band Plan isn't "cast in concrete," it is a
useful starting point. Here's how the bottom end of the band
is "allotted:"

144.0-144.05 EME (CW)
144.05-144.1 General CW/weak signal
144.1-144.2 EME/weak signal SSB
144.20 National Calling Frequency
144.2-144.275 General SSB operation
144.275-144.3 Propagation beacons
etc.

Last night, I chatted with Ron, WZ1V (CT, FN31) on 2 meter SSB and
asked him about the frequencies most used for meteor scatter (ms). Ron
said that on SSB, he generally tried to stay within 144.15-144.18 or
144.24-144.26, to avoid cluttering up the area close to the calling
frequency (144.2).

For those wishing to pursue VHF/UHF weak signal and/or EME work,
I recommend subcribing to the N.E.W.S. Letter of the North East Weak
Signal Group. Drop a note to North East Weak Signal Group, c/o N1DPM,
Fred M. Stefanik, 50 Witheridge Road, Feeding Hills, MA 01030.

As a final note, Dowe East Microwave is under new ownership and
is in a new location. The new address is:

Down East Microwave, Inc.
954, CR 519
Frenchtown, NJ 08825

New owner is Steve Kostro, N2CEI; telephone # is (908) 996-3584

Dave Olean, K1WHS, has taken over the antenna portion of the
business from DEM and now does business as:

Directive Systems
RR1, Box 282
West Lebanon, ME 04027
telephone: (207) 658-7758

Hope all of the above is helpful to any current or budding VHF+
enthusiasts.

It depends on what you're looking for. For your money, you get a subscription to QST (which will run you more than that if you buy it on the news stand), ability to use the ARRL Outgoing QSL Bureau (the incoming bureau, which is partially funded by membership fees, is available to all hams, ARRL members or not, but the outgoing bureau is just for ARRL members), eligibility for the various operating awards like DXCC that require ARRL membership, and a few other members-only things.

Can you enjoy ham radio without an ARRL membership? Of course!

I personally consider ARRL membership a pretty good deal, and both my XYL and I are members... your mileage may vary.

>I'm curious why you are opposed to repeater licensing. I don't
>remember it being that big a deal when it was in place before. The
>application was complicated, but not overly. Comments?

It was complex, and you were swearing to everything you entered on
that form. It was as official as a 1040 to the IRS, and as subject
to penalties. Are you *sure* the uV contours you filed on your pattern
radials were accurate? I'm not, even though I borrowed professional
equipment to do them. But not only was it complex, it had to be refiled
if you wanted to make modifications to the repeater system. Even
reconfiguring auxillary links couldn't be done until FCC approval
was obtained. Portable repeaters for emergency use simply weren't
licensable. Everything you did had to go through the FCC paper
mill before you could do it.

If you were just maintaining a simple squawk box, it wasn't too
bad. But if you were maintaining a linked system, or doing any
kind of experimental work, forget it. It took months to get
clearance for the simplest changes to the system network diagram.

There's absolutely no reason to return to that sort of nightmare.
The system we are operating under now *is not broke*. There's
no reason to draw the government back into separate repeater
licensing. The primary call sign of the owner is sufficient
identification of any repeater he may wish to construct and
operate.

>Best, Mark (WA3RMV)

Best I can remember, ring voltage is about 60 to 90 volts at 20 Hz AC
on the red/green pair, IE between tip and ring, of a plain old telephone.
It'll make you jump and swear if someone calls you while you're working
on the phone wiring.

If you have a keyset on a PBX, it may work completely differently than
POTS phones. Some of them are digital right to the phone and introducing
a high ring voltage can fry them. If you don't know, ask if you can use
a modem on your office line. If you can, it's POTS.

Build or rent a wire plow. It should take about an hour to bury 600 feet
of radial wire.

Dues are scheduled to increase to $31 if they haven't already. Consider
it a cheap magazine subscription. There aren't many monthly magazines
you can get for $31 anymore. Plus there's the membership services offered
by the ARRL, and you will have a voice in the largest US ham organization.
Yeah, it's worth it.

I have been able to work most every thing I can hear with 100 watts on ssb. 600w is just under 8 db over the 100w. An S-meter unit is about 6db. If the station was hearing you S5 at 100w, he would hear you at about S6 running 600w. The only time this will make much difference is during a large pile-up or if you are just above the noise.

My advice is to optimize your antennas before running high power. If you can't hear them, then you can't work them.

From: gttm@cais3.cais.com
Message-ID: <3lhhnk$4bs@news.cais.com>
Source record: 249597

At 0000Z April 1, 1995, the US Coast Guard will make its final HF CW transmission on window frequencies of 8471, 12718.5, and 16976 kHz. Anyone receiving the text of this final transmission may send a copy of the text received to the the Master Area Station in Chesapeake, VA, and will receive a special QSL card commemorating the end of an era. The Master Area Station in Guam will continue HF CW operations until further notice; however, all HF CW operations from USCG will terminate after the final transmission on April 1. The complete address of the Chesapeake station will be included in the text of the final transmission.

Very good bet. They skipped the KPs in the 4th call district in 2x2s
and 2x1s, so odds are real good they'll do it in six-land. Heck,
we're almost out of KS4s.

>
>You found time to study the theory, didn't you?

As a person who never got his license because he hated the code, when the No-Code came around I wasn't paying attention. It was pointed out to me last fall, so I took the shot and got my license in late October. I loved 2m and 220Mhz. It was great, I was finally doing what I had wanted to do.

Then I hooked up with a group of guys who pointed out to me that I should try the code. I dismissed the idea at first, but started to play around with it.

By the early part of March, this month, I got my Extra ticket. But you know what, I would have never gotten involved without the no-code being in place. That's not the worst, though. I could have done it without the no-code, but I didn't. That's not bad either, you probably would never have missed me.

I guess what it all comes down to is the fact that there is so much to explore in the hobby, that some people may never leave the confines of VHF/UHF above 30Mhz. You could be an Extra and *STILL* never leave those confines. If no-code covers the modes and bands they want to use, there is no incentive or reason for them to upgrade.

Yeah, he made a typo error. What he really meant to say was that the HTX-202
was putting out 57 watts.

Those R/S rigs are pretty efficient. They put out 57 watts at 1.55 amps at
13.8 volts, not too bad. I just can't wait to hear about their new mobile
rig.

If it means more work or less revenue for the F.C.C.,
you can be sure it will die a quiet death. If it
means more revenue, they will snap to and listen.

I did see a memo recently suggesting that towers
might need to get registrations of some kind. It
looked more like a paperwork burden than anything,
and something which coordinators might need to
record for reference purposes. I don't know any
more than that.

One guideline: if it came from Washington, D.C.
it is likely a bone-headed idea.

73, QRT, over and out.

Contesting is similar to religeon. Either you've got it or you don't. Not being afflicted with this particular malidy, I have little use for these creatures with their brusque demeanor and fallacious signal reports. I've observed a couple of effective methods for containment and control of the vermin:

Get on there in the middle of them and call 'CQ RAGCHEW'. I've answered several of these cries in the chaos and we usually had pretty good chats, although challenging at times. This is the only time I've ever used an amp on 10 meters except for testing.

Actively police the WARC bands. I've heard contesters aggressively chased off the 12 meter band on a few occasions. I've also heard vain attempts to clear out contesters from the DX window (3.79-3.8 Mhz) on 75 meters. Weak signals apparently don't count with contesters who can only give out 5X9 reports.

Use AM modulation. Contesting on 10 meters is what drove me to listen to other areas in the band and discover the AM'ers at 29.0-29.1 Mhz. Unfortunately its not legal to open up with my DX-100 in the 28.3-28.5 Mhz area. That's all right, they can have it.

For the really seriously challenged who take their hobby seriously:

:-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-) :-)

Come on! Its only a hobby! One of the nicest things about amateur radio is that it only takes a quick twist of the wrist to turn it off, go outside, and GET A LIFE!

> How much need would I have of 600w...

The extra 500 watts will get you just a bit over one additional "S" unit at the receiving end, all other things being equal. Do you need it? Depends on whether one S unit will make the difference between making the contact and not; sometimes yes, sometimes no. My own experience, after running both high power and low, is that you can do almost as well, and have just as much fun, with 100 watts; it's cheaper, you don't nuke your neighbor's tv set, and it's more sporting to boot. It's your decision, of course, but since you asked, I'd say lose the amp and go barefoot. Just one ham's opinion.

So, the pernicious influence of old white men has finally been exposed in amateur radio. Once you can figure out how to remove them, by hook or by crook, ham radio will no doubt experience a great flowering, fueled by all those fresh faces who "get it". Of course, those who happen to be white and male will have to be culled as they age and stultify, but they'll deserve whatever they get.

Hello - I have a Yaesu FT-11R 2M handheld. I also have a "battery eliminator" which is hooked up to a gel-cell battery. I accidentally left the radio hooked up to the gel-cell overnight. There was a speaker mike attached, which has a red LED that lights up when the radio is off. So then, I go to the radio this morning, and the battery is completely dead - but worse, my HT's memories are erased! Not only that, when I try to key in a frequency, it will only let me type in the first three digits (eg, 147 instead of 147.255) those are the only two problems I have observed until now. Any ideas? Much thanx in advance.

Propagation Forecast Bulletin 15 ARLP015
From Tad Cook, KT7H
Seattle, WA March 31, 1995
To all radio amateurs

SB PROP ARL ARLP015
ARLP015 Propagation de KT7H

Solar activity is still low. Flux peaked at 95 last week, but the average level was only slightly higher than the week before. Disturbed conditions peaked on the 26th, when the K index rose to six at 1500z, and the A index was 29 for the day. K indices are now back to low levels, and conditions should remain stable until April 2.

Solar flux should bottom out around 80 from April 6 thru 9, then rise above 90 after April 18.

Sunspot Numbers for March 23 through 29 were 78, 68, 67, 83, 56, 28 and 52, with a mean of 61.7. 10.7 cm flux was 94.2, 95, 92, 90, 89, 83.7 and 80.9, with a mean of 89.3.

The latest projection from the NOAA Space Environment Service Center shows solar flux reaching a minimum for this cycle around September or October, 1996 and the sunspot count reaching the same level around April through June of that year.

The same forecast shows levels rising back to the current level around two years from now.

The solar graphing program for Windows from Scott Craig, WA4TTK, is now available for anonymous FTP on the internet courtesy of the Boston Amateur Radio Club and WY1Z. The file name is SOL201W.ZIP and is in the directory /pub/hamradio at oak.oakland.edu.

4583. Butternut HF2V self-supporting?

Newsgroup: rec.radio.amateur.misc
Date: 1995-03-31 00:00:00 UTC
From: Wayne_Estes@csg.mot.com
Message-ID: <9503311004.ZM20879@SALCIUS2>
Source record: 249622

This weekend I will ground-mount a Butternut HF2V vertical in my back yard.
I would like to hear from other HF2V owners.

60 mph freestanding wind rating seems marginal to me. I get occasional icing
in winter, and summer storms sometimes have 70 mph wind gusts.

Should I guy the antenna?

Would 12 ft. top-loading wires noticeably improve 80m signal reports?

Would the top-loading wires function satisfactorily as guy wires?

Anyone want to help me bury 600 feet of radial wires? (just kidding)

I've been on the NEw York area repeaters for about 6 months now - and it
has been great. Laterly, there are 1 or two guys who are really making
a concerted effort to ruin the fun that we are trying to have - I'm
talking about violently racis and anti-semitic statements on the air,
vulgar streams of obscenities...I want to do something about it - but I
don't know who to contact for help. I have never been on a foxhunt, and
I have no directional finding gear. I was wondering if anyone knew of
any organizations that can help - I just want to get rid of these people
- they really nauseate me when they are on the air - and they have
managed to find almost all of the repeaters that I use - and wreak havoc
on all of them...I just don't understand what kind of perverted enjoyment
they get out of it...

thanx in advance...

I'd like to start building a 2m EME station and would like to enlist the help of fellow netters...can anyone help me?

I have questions that other EME dudes could probably answer, like what is the favorite TX/RX? Favorite antennas? Favorite nets on HF to coordinate? Favorite magazines/newsletters? etc...

Any help is appreciated...

Thanks!
